INTRODUCTION TO REC.RADIO.SHORTWAVE
Am/FM DXing

By Scott Fybush

One of the easiest parts of the radio spectrum to explore is the broadcast bands. This posting will attempt to offer some hints to make your exploration of the medium wave and VHF-FM bands more enjoyable.

I. WHAT ARE THE AM/FM BROADCAST BANDS?

The medium wave (commonly referred to as AM) broadcast band currently extends from 525 to 1605 kilohertz. Channels are spaced in even 10 kHz increments; i.e.: 530, 540, 550, ... , 1600 kHz in the United States and Canada. Elsewhere, channels are generally spaced in 9 kHz increments, i.e.: 531, 540, 549, etc. In the United States, plans are underway to expand the band to 1705 kHz. Within a few years, stations will begin appearing on the 1610-1700 kHz frequencies.

The FM broadcast band in the United States extends from 88 to 108 megahertz. Channels are assigned at 200 kHz increments; i.e.: 88.1, 88.3, 88.5, ... , 107.9. The channels from 88.1 to 91.9 are reserved for noncommercial educational stations. Outside the United States and Canada, the boundaries and channel spacing vary. In Japan, the band starts at 76 MHz. In Western Europe, the band runs from 88-108 MHz, but channels can be irregularly spaced, i.e.: 101.25 MHz.

II. SIGNAL PROPAGATION

The distant stations you are able to receive will depend largely upon signal propagation. This varies depending upon the time of day, the season, and other factors. For medium-wave, the single most important factor for good DX is the time of day. Medium-wave signals pass through the ionosphere during daylight hours and are lost to space. As a result, all medium-wave signals received during daylight hours will arrive by ground wave. Reception of signals over a few hundred miles away is generally impossible in daylight. At night, however, the ionosphere reflects medium-wave signals, making it possible for signals to be heard at much greater distances, up to a few thousand miles. Reception also tends to be better in winter than in summer. Many smaller medium-wave stations are required to sign off or reduce power sharply at sunset so as to reduce interference to distant stations.

For FM, daylight is unimportant. FM signals generally carry no more than 150-200 miles even under the best conditions. Since the

ionosphere generally does not reflect VHF FM signals, such signals must travel line-of-sight to reach the receiving antenna. FM transmitting antennas are thus usually located as high as possible. Tall towers, high buildings, and mountaintops are common FM transmission sites. Under certain conditions, the E layer of the ionosphere will reflect VHF FM signals, thus making it possible to receive extremely long-distance FM reception. This is almost impossible to predict, however.

III. RECEIVERS

Almost any radio is capable of some broadcast-band DXing, especially long-distance medium-wave reception. However, most recent radios, even those designed for quality shortwave reception, do not have outstanding broadcast band reception. One exception is the General Electric SuperRadio II (Model No. 7-2885F.) The SR II is designed for optimum AM/FM broadcast performance, incorporating:

* RF amplifiers on both bands
* Ceramic filters and Automatic Frequency Control on FM
* An analog tuner with an IC-type receiver chip and air-variable capacitors.
* No PLLs or digital displays for less electronic noise.
* A 2-way speaker system with 1 watt of audio power.

The SR II is a bulky (4" x 10" x 12") portable radio which can be run off 120V AC or 6 "D" batteries, providinover 400 hours of battery life. The styling is cheap silver and black plastic, and has been described as ugly. Nevertheless, this radio has become popular among the DX community for its exceptional performance.

It costs between thirty and sixty dollars in the US, and may be found at many discount outlets. It is generally back-ordered by mail, but can be obtained from Bennett Brothers (Order #R8883) at 1-800-621-2626 or 1-800-631-3838, or from Best Products (Order # 140457) at 1-800-950-2398.

With the sale of GE's consumer electronics division to Thomson, this product's future remains in the air.

If you don't have a SuperRadio, some important things to seek out in a receiver are:

* External antenna connections. These make it easier to use a better antenna than the one supplied with the radio.

* High selectivity. This refers to the receiver's ability to reject strong signals on adjacent frequencies, and is more important to good reception than is sensitivity, since a good antenna will provide more-than-adequate signal strengths.

* Digital frequency display. While the circuitry involved does add to the level of internal electronic noise in the radio, digital display

makes it possible to more easily determine what station is being heard.

IV. ANTENNAS

For medium-wave reception, most receivers have a short internal ferrite rod. This will provide acceptable signals for high-powered distant stations. The ferrite rod tends to be quite directional, and the radio can thus be turned to null out strong interfering signals, or to improve reception of the desired signal.

For more advanced DXing, an external antenna is a must. The easiest external antenna is a simple longwire, 50 feet or more run out the window and then as high as possible (up in a tree, for example.) The wire can be connected to the external antenna terminal. If none exists, you can open up the radio and wrap the wire a few turns around the ferrite rod inside. It is also possible, although less desirable, to simply wrap the wire around the entire radio. If the radio has a terminal marked "ground" or "GND," another wire can be run from this terminal to a copper rod driven a few feet into the earth.

A more advanced antenna is the "beverage" antenna. This is a length of wire 1000 feet or more. It is terminated at the far end with a 450 ohm resistor connected to a metal stake driven into the ground. It should be pointed in the direction of the desired station. The beverage antenna can, under good conditions, be used for transatlantic and transpacific DX. Another more advanced antenna is the loop, a four-foot wooden frame with about 20 turns of wire run around it. It is connected to the radio with a 365 pF variable capacitor for tuning. The loop is extremely directional.

For FM, the important factor is height. The higher one can place an antenna, the better reception will be. A multielement Yagi antenna, which can be found in Radio Shack or similar stores, will often produce excellent reception. Since a yagi is quite directional, the use of a rotor is essential for reception of stations in different directions.

V. WHAT'S OUT THERE TO LISTEN TO?

There are over 10,000 radio stations in the United States alone. It's important to have some idea of what to expect to hear. A good directory is important (see STATION LISTINGS below), but it's essential to know what the station information means.

For medium-wave, US frequencies fall into three basic classes:

* CLEAR CHANNEL: These frequencies are 540, 640, 650, 660, 670, 680, 690, 700, 710, 720, 730, 740, 750, 760, 770, 780, 800, 810, 820, 830, 840, 850, 860, 870, 880, 890, 900, 940, 990, 1000, 1010, 1020, 1030, 1040, 1050, 1060, 1070, 1080, 1090, 1100, 1110, 1120, 1130, 1140, 1160, 1170, 1180, 1190, 1200, 1210, 1220, 1500, 1510, 1520, 1530, 1540, 1550, 1560, 1570, and 1580 kHz. Clear channels are home to one or two

50,000 watt powerhouse signals which can be heard reliably in half the country or more. Other stations on clear channels usually sign off at sunset or reduce their power considerably. In recent years, the FCC has added many new stations to the clear channels, making reception of some stations more difficult than it once was.

* LOCAL: These frequencies are 1230, 1240, 1340, 1400, 1450, and 1490 kHz. Stations on local channels can use a maximum of 1000 watts. At night, these six frequencies tend to become chaotic, as the hundred-plus stations on each channel cause each other tremendous interference. Identifying distant stations on these channels requires a directional antenna, a good ear, and plenty of patience.

* REGIONAL: These are all the remaining channels. U.S. stations on these frequencies are restricted to 5000 watts. While not as noisy as the locals, reception on regional channels can be difficult. Most regional, or class III stations, use directional antennas to reduce interference with distant stations.

On FM, the American FCC has reduced its restrictions on power and antenna height considerably. Today, FM stations are allowed up to 50,000 watts from a 150 meter antenna in the Northeast and California; 100,000 watts from a 610 meter antenna elsewhere. Many stations, however, serve much smaller areas. These "Class A" stations use only 6000 watts or less. They were formerly restricted to just a few frequencies: 92.1, 92.7, 93.5, 94.3, 95.3, 95.9, 96.7, 97.7, 98.3, 99.3, 100.1, 100.9, 101.7, 102.3, 103.1, 103.9, 104.9, 105.5, 106.3, and 107.1 MHz. While the FCC no longer restricts class A stations to those frequencies, most are still found there. Likewise, only a few of the high-power stations are found on the old class A channels. For stations with extemely high antenna, the FCC mandates that transmitter power be reduced proportionately; thus a station with only 430 watts from a 220 meter antenna will reach about as far as a 3000 watt signal from the usual 91 meter antenna will.

VI. STATION LISTINGS

An essential tool for any DXer is a good station listing. This will help identify what's being received, as well as provide a way to contact the station being heard.

For North American stations, one concise and inexpensive directory is the M Street Radio Directory, published annually. The M Street listing includes frequency, power, directionality, format, address, phone number, and other listings less important to DXing. M Street also is indexed by call letter order and by frequency. The M Street directory costs $29.95 + p/h. It can be purchased directly from M Street at 800-248-4242 or +1 212 473 4668 voice, or +1 212 473 4626 fax. The address is M Street Corp., 304 Park Ave S Floor 7, New York, NY 10010 USA. For FM DXers, the standard guide is Bruce Elving's annual FM Atlas. This includes maps showing every FM transmitter in North America, plus listings by state and frequency indicating power,

stereo status, format, subcarriers, and slogans. FM Atlas does not include addresses or phone numbers. It can be purchased directly from Bruce Elving, PO Box 336, Esko MN 55733-0336. It costs $10.95 + $1.05 p/h.

Other listings include the NRC Log for AM stations and Broadcasting Yearbook, which is available at some larger libraries. The Canadian Almanac and Directory includes call letters, frequency, and addresses for Canadian stations.

For listings outside North America, consult the World Radio TV handbook, published annually and available at bookstores or through radio specialty mail order outlets such as the Radio Collection and CRB Publishing.

VII. TIPS FOR BEGINNING

The most important element for beginning DXers is to get to know the dial. Spend a few hours scanning up and down the dial both during the day and at night. At night, the clear-channel 50kw stations should be easy to hear. Learn all the local stations. Find out which ones sign off at sunset and which stay on all night. This will affect which distant stations can be received. If you have a local station on all night, you shouldn't expect to hear another station on that frequency. Experiment with radio placement. As you turn the radio, observe its directional characteristics.

Prepare a log of the stations you've heard, arranged by frequency. The better you know whatthe dial usually sounds like, the more prepared you'll be for that unusual catch.

VIII. SOME ADVANCED IDEAS

Once you've mastered the basics, here are some suggestions for areas of specialty DX:

* QSLing. Most AM/FM broadcasters aren't used to QSLing. You'll probably have to send a letter to the station's chief engineer. Expect verification in letter form. Small stations are often excited to find out they've been heard thousands of miles away.

* DX Tests. A few stations still run special DX tests. Some daytime stations run experimental tests with their daytime power after dark. Others will assemble special DX programs for distant listeners, often late Sunday night/Monday morning, when some stations sign off for maintenance (although not as many as used to do so.)

* Sunrise/sunset DXing. Interesting medium-wave DX can be had when your receiving station is in darkness, but a target transmitter is still in daylight. It's possible to hear distant daytime-only stations this way. This requires a lot of skill, since there may be only ten or fifteen minutes in which to try.

* FM Subcarriers and Stereo. FM stations are allowed to transmit separate programming on a subcarrier. This requires a special decoder (the best source is Bruce Elving's FM Atlas; see address above.) FM stations use their SCA (Secondary Communications Authority) subcarriers for transmitting data, background music, ethnic programming, and more. Some AM stations now transmit in stereo. With an AM stereo receiver, you can hear stereo signals from thousands of miles away.

* Transatlantic/Transpacific DX. Some DXers in North America specialize in trying to receive signals on the medium-wave band from across the ocean. This requires outstanding propagation characteristics and plenty of patience.

* Meteor Scatter. The most masochistic of all FM DXers attempt to hear FM signals reflected from --yes, it's true-- meteors in the atmosphere. These DXers learn to identify stations on the basis of a few seconds' listening.

* Tropospheric Ducting. Under certain atmospheric conditions (usually very early mornings), FM signals will be carried long distances through a "duct" in the atmosphere. This is difficult to predict, but can result in long-distance FM DX.

IX. IDENTIFYING YOUR CATCH

Radio stations in the United States are required to identify with their full call letters and city of license once an hour, between 10 minutes before and 10 minutes after the top of the hour. Canadian stations are never required to identify, and many never use any identifier other than "Q107" or "Toronto's 590 AM." It's therefore important to use other clues:

* Time announcements. These can tell you at least what time zone a station is in. If there's only one or two stations on a frequency in a given time zone, this makes identification easier.

* Format. If you have a list of stations that includes formats, use it. That includes knowing what network a station uses, whether the station uses a satellite-delivered music format, what slogans the station might use, etc.

* Local color. You might be able to hear names of cities or streets or notable local personalities mentioned during commercials, newscasts, talk shows, or weather forecasts. If the announcer says, "Here's the weather for the beaches today...", the station you're hearing probably isn't in North Dakota. Likewise, if the forecast is snow flurries and six degrees, you're probably not hearing Miami. These clues are among the most valuable.

X. CONCLUSION

Broadcast band DXing is an exciting way to hear the sounds of cities and towns around the nation and even around the world. It doesn't

necessarily require thousands of dollars of expensive equipment or huge antennas on the roof. All it asks of the would-be DXer is time, patience, and knowledge. Have fun!

THANKS TO...

Bob Foxworth, Garret W. Gengler (antenna ideas), Bob Parnass, Paul Schleck (SuperRadio II information), and Bruce Werner, along with anyone else I may have forgotten.

>serious about broadcasting. Not only do the digitals sound infinitely
>better, but require absolutely no tinkering or maintenance.
>
>Do you people have too little else to do?

Look at it this way: You own a radio station and already have two tape decks (most do, I expect.) Do you

(a) go to the considerable expense of adding a digital delay unit plus train your engineers to use it, or

(b) train your engineers to hook up the tape decks as a delay.

(Did I mention that most radio stations are impoverished?)

As for intent and purpose of the FCC, it was my understanding that their original charter was spectrum management. One look at the AM BCB and you have an idea of their overall efficacy in that department since 1934.

Infinity President Mel Karmazin's argument that the Commission should enumerate the list of taboo words underscores the technical side of the problem. The FCC is unlikely to ever crisply define an enforceable code of obscenity. Opinions notwithstanding, the real tragedy in the Stern affair is that his show would have self-regulated itself out of business, assisted by an enraged public, if attempted 20 years ago.

## 4. Tweak AM rcvr for 1700KHz reception

Newsgroup: rec.radio.broadcasting
Date: 1993-01-04 13:08:14 UTC
From: rfc@allegra.att.com
Message-ID: <1993Jan4.130814.3129@gagme.chi.il.us>
Source record: 43993

The AM broadcast band is expanding up to 1700KHz soon, and some AM
radios can be adjusted to accomodate this new spectrum. The
radio should have vague calibrations, as the calibration
would otherwise need to be changed. We're talking about analog tuned
radios, like cheap portables or clock radios.
Practice on a radio you don't care about before you attempt a good radio!
Step 1: You'll need a 1700KHz signal source, perferrably AM
modulated with a tone. Also tunable to the range 530 to
1710KHZ.
Step 2: See how far the radio will tune before you touch any
adjustments. Maybe it already is capable of getting 1700KHz.
If not...
Step 3: You need to identify the purpose of all trimmers and
adjustments in the radio. Assuming no RF stage, look for: antenna
trimmer cap, oscillator trimmer cap, oscillator tank coil, Antenna
loopstick (hopefully, the wire is wound on a slidable paper
coilform), and the IF coils.
Step 4: Mark, with a fine point magic marker, the orginal positions
of all cap and coil adjustments, so you can return them to their
orginal setting if this procedure doesn't work out. Look to see if
the osc and ant trimmer caps are currently set at about their
midpoints, not at or near minimum capacitance. If they are near or
at minimum, stop. This procedure then won't work with that radio.
Step 5: Set the signal source to 530 KHz, and check that the radio
can tune that in, and then see how far the radio can tune the upper
end. Also tune in radio stations of known frequency and zerobeat the
generator, as a check on the generator's accuracy. Now find a
station at or near the top end of the band and "walk" it doun your
dial a little bit by making small adjustments of the oscillator
trimmer (turn for less capacitance on the trimmer).
Tune to the bottom of the dial, and adjust the osc coil to bring back
the bottom of the band (530). Repeate this process a few
times, as you walk the station at the top of the band down. Check to
see if you can receive your generator set to 1710KHz yet (Gives
the radio a little leeway for temperature and whatnot drift over
time).
Step 6: Now that the radio can tune 530 to 1710KHz, you'll need to
tweak the antenna LC circuit. Tune a station near 620KHz, and slide
the antenna loopstick coil (avoid putting your fingers on the coil
itself, touch the ends of the coilform with fingernails or such)
for max signal strength. Now tune a station near 1480KHz, and tweak
the antenna trimmer cap. repeat process a few times.

You shouldn't need to touch the IF strip.

That should do it. Enjoy the new stations when they sign on.
Proceed at your own risk

## 5. WNEW - New York

Newsgroup: rec.radio.broadcasting
Date: 1993-01-04 13:08:24 UTC
From: "No FT...no comment" <ARORA@ecs.umass.EDU>
Message-ID: <1993Jan4.130824.3152@gagme.chi.il.us>
Source record: 43991

What's the story with WNEW? The last thing I heard was that it was
to become a business station. But When I tuned in Jan. 1st I got a station
that was brouadcasing what was on the 1560 frequency (ex. QXR).
I live up in Western Mass., and can only pick up AM signals when it
gets dark from my portable.

[Moderator's Note: This subject has been covered extensively on this group.
Essentially, WNEW -1130 was sold. The new format will be business radio.
WQXR (now WQEW) took over the Big Band format and is temporarily simulcasting
with the former WNEW. Soon the stations will no longer be simulcasting and
WQEW will try to get the old WNEW call letters to complete the switch. Hope
this helps.Bill]

## 6. Philadelphia/NJ Request FAX numbers?

Newsgroup: rec.radio.broadcasting
Date: 1993-01-04 13:12:19 UTC
From: birchall@pilot.njin.net
Message-ID: <1993Jan4.131219.3258@gagme.chi.il.us>
Source record: 43994

I'm trying to find the FAX request numbers for a few stations I enjoy listening to... I recently figured out how to use my FaxModem (they're only slightly more challenging than programming VCR's ;) and have discovered that FAX request lines are (not surprisingly) not "busy" as much as voice request lines.

Thus far, I've only managed to get the number for WMMR, 93.3 FM in Philly. They said it on the air, surprisingly. (215-932-WMMR)

I'd also like to get a FAX request number for WPST, 97.5 FM Philly/Trenton NJ.
They say their 1-800 _voice_ number, but don't mention FAX.

Finally, I'd like to get a FAX number for WDRE, which just started a station in Philadelphia (they have one in Garden City NY, right by Long Island, too.) I think they have a FAX number, _maybe_ even a 1-800 FAX.

If anyone knows the request FAX numbers for WPST or WDRE, please drop me some mail (I don't read this group very often at all, sorry)... FAX numbers for station's business offices aren't what I need though, please don't send those.

Thanks much,

-Shag (I love my FaxModem)

## 7. Joe Frank Program List

Newsgroup: rec.radio.broadcasting
Date: 1993-01-04 13:12:40 UTC
From: johnc@endor.harvard.edu
Message-ID: <1993Jan4.131240.3284@gagme.chi.il.us>
Source record: 43995

Hi,

I am very disappointed to hear that "Joe Frank" will not be broadcast on our local NPR station. I plan on writing to the program director to encourage the airing of past material.

I recieved a copy of the program list from KCRW. Many of the titles I did not recognise. I feel that Joe's earlier work was a lot better than the stuff they were broadcasting lately. I very much liked "Highways West" and "Sales" but did not care for "Iceland", thought it was very tiresome.

I plan on buying some of the better tapes. Can any fans reccomend any of thier favorites? Or advise me to stay away from certain ones? I would be interested to hear from other listeners.

Thanks,

John Chervinsky

## 8. Re: Interference on KING *IN* Seattle!

Newsgroup: rec.radio.broadcasting
Date: 1993-01-04 13:12:48 UTC
From: price@nosc.mil
Message-ID: <1993Jan4.131248.3316@gagme.chi.il.us>
Source record: 43997

XPRS on 1090 and XTRA on 690 both have large directional arrays
just south of Tijuana, BC which are aimed at Los Angeles.
Unfortunately, the are also aimed at Seattle! These stations,
especially XPRS, have been a problem for years in many regards.
KNX on 1070 in Los Angeles has a constant battle with splatter
from XPRS, even in their city grade service areas.

CBU in Vancouver has similar problems with XTRA, I believe.

You can hear both XPRS and XTRA in Anchorage, too! Proves antenna
theory is correct.

I'm sure folks can find the "owners" of XPRS, by the by--the KNX
folks certainly know who they are. And there have been a number
of meetings with the Mexican FCC on this subject, too.

## 9. Re: How to Prepare For the Startup of an AM Radio Tower Nearby

Newsgroup: rec.radio.broadcasting
Date: 1993-01-04 13:13:07 UTC
From: "A.J. Janschewitz" <p00258@psilink.com>
Message-ID: <1993Jan4.131307.3351@gagme.chi.il.us>
Source record: 43996

>My parents and their neighbors were unable to block a radio station's
>request for zoning exception in Germantown, Maryland. The result is
>four very high towers that will soon be broadcasting in the AM band (I
>don't know the broadcast power, though.)

I'm afraid that even if you do field strength measurements before and
after the station starts transmitting, any action you might take as a
result of supposed effects of heightened RF in the area will be
pooh-poohed, much as the link between smoking and cancer is simply
"anecdotal."

I would think that your best approach might be to try to become good
neighbors to the station (if you can't beat 'em, etc.). Perhaps by
getting to know the station's engineer and owner you can convince them
not to use strobe flashers on the towers, thus saving the neighborhood
from the feeling of being in a well-orchestrated lightning storm all the
time, and even get them to cooperate by handing out filters and helping
with hard grounding when the station starts showing up on the TV and leaking
into the stereo.

As you've found out already, the government is unlikely to help.

==a.j.==

Have there been any studies of the health risks of living right next to a high power tower? Certainly, there's been a lot of fuss (properly so) about high tension electrical cables (see December 14 New Yorker).

Health risk + lawyer = no new tower

## 11. Re: How to Prepare For the Startup of an AM Radio Tower Nearby

This already sounds like a witchhunt by a bunch of NIMBY types. Lets be sure to look for a problem so we can jump up and down and scream at the FEDS to come to our rescue.

The result is
>four very high towers

You don't know how tall? How many? How much power?

>don't know the broadcast power, though.)
>
>Can anyone suggest any measurements, recordings, or other things that
>should be done now, before broadcasting starts, that will help if we
>need to later complain to the FCC about interference, bad phone noise,
^^^^^^^^
This is it !!!

>etc.? If there are any firms that specialize in this type of
>measurment, their names or numbers would be appreciated.
>
First off there is nothing there to measure at the present time. Unless you want to measure the ABSENCE of a signal. You might even record the fact that there is presently static on that frequency. Yes there are firms that specialize in doing measurements on AM antenna patterns. They are call Broadcast consultants and they normally charge a station anywhere from 15 to 25 thousand dollars to do a proof f the pattern to make sure it complies with the design and directional characteristics set forward in the licence and construction permit that was issued by the FCC.

If the work is done properly according to the design...and the FCC grants the station a licence to operate said station...Your parents and their neighbors will be up ye old poverbial SHITS CREEK if they intend on doing anthing about the towers being there.

Another point..If the station is properly built...you will notencounter any interference and if you do ...there are remedies that do not involve contacting the Commission. If your parents house is within 1/2 mile of the antenna site

and they encounter any such interference...it is the
responsibility of the licencee to rectify the problem. If
they live further away...it is their problem and the station
can legaly thumb their nose at you. Altho I've rarely seen
an engineer of a radio station that was unwilling to help
solve those kinds of problems. If you threaten the engineer
and give him a big pile of crap over a problem...he just
might tend to ignore you.

The biggest problem with interference that I have
encountered over the years is one involving cheap telephones
with no RFI protection. Phones with alot of bells and
whistles that you bought for 50 bucks from K-Mart will be
the biggest offenders. Any competent tech can solve these
kinds of problems..

>FYI, my parents and neighbors aren't suffering too much from the NIMBY
>syndrome, they just don't like the way the site was picked --

AM tower locations have little choice about where they can
be located and still work. My guess the radio station spent
several thousand dollars doing a site study prior to picking
the site. If they had asked your parent to pick a place
...I'm sure they would have placed it behind a mountain
where it wouldn't be seen.

>rezoning wasn't well publicized, with the required information sign
>being positioned well back from the road. Furthermore, the sign only
>vaguely mentioned construction of a tower, which the majority of

>finally realized what was happening, they didn't have much time to
>prepare a case for the final zoning review board. Naturally, the
>radio station had a slew of well-qualified lawyers, etc specializing
>in radio tower/FCC matters, versus the attorney that the local home
>owners had hired out of their own pockets.

I'm not going to jump all over this like my gut reaction
wants me to do. I'm sure if the property was REZONED as you
say...that sufficiant notice was given and it had to go
through several readings and public comment before the local
government passed such an ordinance. I wasn't aware that a
SIGN had to be posted at the sight of a proposed rezoneing.
Most of the time that is posted in the local newspaper and
when it comes before the local gov...it is published in the
minutes of the meeting and well as the newspaper listing the
agenda for the local govs meeting.

A slew of well-qualified lawyers....hahahahahahahaha. You
are not making many points with me here. A lawyer is a lawyer
and for the purposes of building a tower on a piece of
property you want a REAL ESTATE atty or one that specializes

in city or corporate law. They may have had a design
engeneer there to represent the structural integrity of the
towers and maybe a Broadcast engineer there to quantify the
fact that there will be no interference to the neighborhood.
But an FFC atty that is into towers....gimme a break.!!

I have built 5 different AM arrays with the help of the
proper consultants, attys, and tower people. I have yet to
encounter any interference except one cheap ass panasonic
phone that was wired in reverse polarity and had absoultley
no RFI protection buit into its circuitry. Right now I have
a 1000 w full timer sitting in the middle of a neighborhood
with houses on all for sides...all within 100 yards of the
stick (one of them even has the ground plane running through
it's yard) and NOBODY !!!! has ANY PROBLEMS !!!

>Any information or advice would be appreciated.

ADVISE-----QUIT SWEATIN IT..!!

If you have a problem...be nice to the Chief Engineer of the
station and he (or she) will solve you problems with a
smile.>

What? Have you not heard of ASCAP and BMI? These organizations
certainly do extract a pound of flesh from each and every US
commercial broadcaster. And the fees are based on GROSS revenue, not
net. In other words, these folks get their full measure even if the
station is going right down the financial toilet.

Just ask KEEN.

Yes, people near high tension lines seem to have a higher rate of cancer.
That's true. Might this have something to do with the PCB-laden oil that
they poured on the power line right-of-ways to keep the dust down? Or
of all the herbicides that they sprayed for years? Nahh, must be the
radiation.

I have seen a number of studies that show that folks living near power
lines have higher cancer rates, and then just assume that it must be caused
by the radiation. Bad move. There are so many other hazards that the
radiation is a fairly minimal one.

RF can be hazardous, true enough. Just ask the engineer at KYOI who
had several amps worth of it flowing through his body when he was killed.
But because it falls off at the square of the distance, you would expect
significantly more damage to people very near the antenna than those a
mile or so away.

I've worked in an office where you could remove the fluorescent tubes and
they would continue to remain lit in your hand, and where you had to take
watches and jewelry off or it would tingle. If RF was all that hazardous
I would be long dead.

## 15. WBBR: Initial Impressions

Newsgroup: rec.radio.broadcasting
Date: 1993-01-06 04:48:07 UTC
From: fybush@world.std.com
Message-ID: <1993Jan6.044807.2827@gagme.chi.il.us>
Source record: 43903

WNEW's successor station, WBBR New York, began its original programming Monday morning, January 4. I've had a chance to listen a bit, mostly Monday morning around 10:30, Monday night around 9, Tuesday morning around 4, and Tuesday morning around 9:30. Here are some initial impressions:

*WBBR had been expected to take on an all-business format. Instead, they're positioning themselves as an all-newser with a heavy emphasis on business. Their format is even more bare-bones than the all-news competition in NY, 880 WCBS (CBS-owned) and 1010 WINS (Group W-owned). It's based on a ten-minute clock, with national/world news in the first minute, sports/weather/traffic in the last minute, and a mix of very short business- and news-related features along with spots in the remaining 8 minutes of each 10.

*There are no reporters...in fact, there's no sound at all in the news portions of the format, just an announcer reading wire copy. This will hurt WBBR when compared to the fairly large reporting staffs at WCBS and WINS, and it will kill them when a big local story breaks. There's not even any network sound in the national/world casts. I know WCBS (CBS) and WINS (ABC) have the two big affiliations tied up, but there's still sound available through AP and UPI, just to name a few.

*There are no anchors as such. In fact, the national/world newscasts don't even come out of New York at night. By 9 PM they're being read in Tokyo, and by 4 AM they were coming out of London. Transitions between segments are done with (recorded?) liners like "It's 8:23 at Bloomberg News Radio...with the news you need to know." I suspect the overnight local news may be taped as well...and that means the New York newsroom would be unstaffed at night. This is only speculation.

*Business coverage is, as expected, thorough. One of WBBR's lead business anchors is Jim Kingsland, formerly with CNBC/FNN. Jim used to do the business reports for WBZ, and I had high respect for him then as well. Business seems to make up about half of WBBR's news hole. That's more than the 10 percent or so at WINS and WCBS, but I question whether that alone will be enough to draw the affluent businesspeople away from everything else that WCBS and WINS offer. After all, I don't think anyone expects WBBR to be the sole source of business news for its listeners...and if someone already carries a Quotrex or has CNBC at the office, why would they need WBBR? And for those who aren't as obsessive, the livelier presentations on WCBS and WINS, along with business every half hour, will probably be enough to keep them from switching to WBBR.

*WBBR has a heavy spot load right from the start. Interestingly, one advertiser is WQEW (1560), the new home of the big band music that

used to be on WNEW when it was on 1130. I suspect this is WBBR's way of repaying WQEW for granting permission to simulcast its big band from mid-December till the new format was ready.

*Speaking of WNEW, WBBR has kept the "AM Eleven-three-oh" line that WNEW used to use. Why? I don't know.

*This is purely speculative...but I suspect 1130's power was kept low while it was simulcasting WQEW last month. For whatever reason, 1130 has been stronger here in suburban Boston since the format change. I can hear it during the day in parts of town where it used to be entirely overpowered by hash from 1120 and 1150, and the nighttime skip signal seems better too. This isn't just a change in propagation, since WABC and WOR from NY were almost unlistenable last night.

*Anyone in NYC know where Bruce Williams, Larry King, the Nets, and the Giants landed since the format change?

*Finally...don't look for the old WNEW(AM) calls to resurface soon. Group W, which owns WNEW-FM in NY has filed to change the calls to WNEW(FM). To the FCC, this means that the WNEW(AM) calls cannot be issued...unless, of course, Group W decides to take a hefty sum of cash to give up the WNEW(FM) calls. :-)

I'd be interested to hear what other people think of this new 1130.

Scott Fybush -- fybush@world.std.com

Hi. I'm out here in Cleveland, Ohio basically, and last weekend I got a VERY CLEAR reception of 89X, a radio station in Detroit, Michigan.

Now I'm getting the fm station, but it's broken up and static-y. Someone mentioned to me about a device called an FM booster or something to pick up 89X's transmisison more clearly. Is there such a device or what do I need to do to get that station in more clearly in my own Cleveland home?

(Aside from moving to Detroit, thank you.)

## 18. DISTANT Station Move Approved

Newsgroup: rec.radio.broadcasting
Date: 1993-01-06 04:53:22 UTC
From: Robert Carpenter <rc@cmr.ncsl.nist.gov>
Message-ID: <1993Jan6.045322.2999@gagme.chi.il.us>
Source record: 43907

Today's issue of Broadcasting(R), in the FCC actions section, lists as approved by the FCC, the following Facilities Change:

"Pocomoke City, MD WDMV(AM) 540 kHz - Granted app. of Five Star Broadcasting, Inc. for CP to change city of license to Brinklow, MD; increase power to 1 kW; make changes in antenna system and change transmitter location to 1.3 km NNW of intersection of state Hwy 97 and Jennings Chapel Road, Roxbury Mills, MD; 39 15 42 N - 77 03 39 W. Action Nov. 25."

Why do I bother you with this item??? The new location is about 180 km or 120 MILES from the old location. They are moving from a little town on the lower Delmarva Peninsula to a location between Baltimore and Washington!

I'm surprised that the application (which I hadn't noticed) didn't get some excited response from Baltimore-Washington stations. This is a classic "move-in", much like the FM move-in from Alabama to Atlanta which was rejected recently. Maybe no one cares about an AM daytimer any more. More likely no one knew where Brinklow and Roxbury Mills were!

Bob Carpenter

[Later the same day, Robert writes...]

Ok, Ok, WMDV is a FULL-TIME station, not daytimer. They now have 240 W at night.

Moving WDMV from Pocomoke City to the Baltimore/Washington area is going to create an interesting interference situation. The State of Maryland has a state-wide set of Motorists' Information stations. Almost all of them are on 530 kHz, including a number in the Washington/Baltimore area. Only on the lower Eastern Shore (near WDMV's present location) do they use 1610 kHz. Either a number of these stations will have to move, or we're going to hear a 10 kHz whistle on the moved WDMV. But where can they move, now that the AM band is expanded to 1700 kHz - but VERY FEW cars have radios that cover the extended portion ??

[Moderator's Note: There is a 400 watt DA-2 station on 540khz in Jackson Wisconsin which is about 120 miles north of Chicago. Although their DA does point more or less south, at Chicago, they put a class B++ to lass A signal into Chicago day and night. WIND Chicago's 5000 watt 560khz station is easily heard 300 or more miles north during the day. They (WIND) even have a sales office located in Milwaukee, 90 miles north of Chicago. A few years ago, a 5000 watt station in Bismark N.D. (on 550) claimed to have the greatest daytime land coverage of *ANY* AM station in the country. They emphasized that they meant "any and all, regardless of power". Never underestimate the ground conductivity at such low frequencies :-). Bill]

Bob Carpenter

## 19. Old radio shows on CD

Source record: 43905

When shopping before Christmas, I saw two four-cd packages of old-time radio material. One package contained eight episodes of The Shadow. The other contained what appeared to be excerpts from various programs. (One disk featured comedy teams; I don't remember what the others had.)

Has anyone heard any of these newly packaged old programs?

I am curious as to whether the quality has been improved or whether they are the same (audio) quality programs that are available on same and tapes.

I am interested in hearing from anyone who has heard some OTR shows on compact discs.

## 20. New Portable Receiver

Newsgroup: rec.radio.broadcasting
Date: 1993-01-06 04:57:29 UTC
From: Robert Carpenter <rc@cmr.ncsl.nist.gov>
Message-ID: <1993Jan6.045729.3143@gagme.chi.il.us>
Source record: 43908

The December 1992 (boat show) edition of the French yeachting magazine
"Bateaux" has a picture and writeup on an interesting new Sony radio.
It is the ICF 55. Like their older all-wave models, it covers from 150 kHz
to 29.999 MHz, and the FM band from 76 to 108 MHz. There seem to be two
interesting new features:
> It is "really" intended for SSB reception.
> It tunes in 1 kHz steps (not 5 kHz like the older ones).
> It has a real and substantial rotary knob for continuous tuning.
> Less importantly, it's dial seems to be a very large gee-whiz
LCD affair with world map, lots of numbers, etc., etc.
I have no idea how large it is, but it's clearly not a "baby" unit.

The French price is 3200 F, which is just under $600. I would expect the
USA price to be a lot less, maybe about $395 - since things are just
cheaper here.

No endorsement given.

## 21. Texas Changes (KTUX to rock 40, KRTK on, ...)

Newsgroup: rec.radio.broadcasting
Date: 1993-01-06 04:57:50 UTC
From: "Chip (C.D.) Kelley" <chipk@bnr.ca>
Message-ID: <1993Jan6.045750.3176@gagme.chi.il.us>
Source record: 43909

Lots of changes around Texas the last couple of weeks...

KTUX-98.9 Carthage (Shreveport LA & Longview TX) has moved from CHR "Tux 99" to rock CHR "Tux 99 Rocks." KTUX's approach seems to more closely resemble the new KKYK-103.7 "Kick 103.7" Little Rock AR rock 40 model than KEGL-97.1 "the Eagle 97.1, Today's Rock & Roll" approach in that KTUX plays quite a bit of classic rock material.

Nearby KIXS-107.3 Whitehouse (Tyler/Longview) has finished off their transition from CHR "Kiss 107" to adult CHR "Mix 107.3." KISX is still fairly uptempo and not quite as dull as most adult top 40s tend to be.

Those two changes leave both the radio markets Tyler/Longview and Shreveport/Bossier City without a mainstream top 40. Tyler listeners are on the fringe of Dallas CHR KHKS-106.1 "106.1 Kiss FM." Shreveport listeners will have to chose between the new KTUX or urban KMJJ-100.1 "Mo' Jamz KMJJ" (yes, that's what they go by) or see if they can pick up KQID-93.1 "93QID" Alexandria LA or KNOE-FM-101.9 "FM102" Monroe LA.

KRTK-97.1 Cleveland (Houston) has finally signed on simulcasting non-co-owned classical KRTS-92.1 Seabrook (Houston); both become "K-Arts." Even with KRTK's 100 kw signal and KRTS's 50 kw signal, there are still areas of Houston where both signals are pretty awful. I believe KRTS is still trying to upgrade to 100 kw, assuming rock KTSR-92.1 College Station ever relocates to another frequency.

Around Dallas, KJZY-99.1 Denton switches calls to KDZR, still SMN Z-Rock "99-1 Z-Rock"; KSSA-1600 Cockrell Hill switches calls to KRVA, still Spanish "Radio Variedades"; KSSA-FM-106.9 McKinney switches calls to KRVA-FM, still Spanish "Latin 107."

Spanish KCOR-1350 San Antonio is buying AC KSRR-92.9 "Star 93" with a likely format change to Spanish to come. KSRR was co-owned with longtime oldies KONO-860, which together lease KONO-FM-101.1 Fredericksburg to simulcast KONO. News-talk WOAI-1200/country KAJA-97.3 "KJ97" recently bought crosstown AC KQXT-101.9 "KQ102."

Other changes ... KWIC-107.9 Beaumont-Houston is still silent (rumor is KWIC would return after being LMAed); co-owned KKFH-1380 Beaumont is still off ... KZZB-990 Beaumont returns to the air as black gospel "Gospel 990" ... AC KQXY-94.1 Beaumont "94Q" seems to be moving toward top 40, playing Bon Jovi and Def Leppard now ... KJTX-104.5 Jefferson is now gospel ... KRQX-1590/KYCX-FM-104.9 Mexia switch from local to satellite country ... Southwest Texas Univ's KTSW-89.9 New Braunfels is on with college/alternative

rock (actually I think it's off now due to student break, but it was on) ...
classical KMFA-89.5 Austin has made its power upgrade to 65 kw.

Chip
chipk@bnr.ca

My opinion's, not BNR's

## 22. Pacifica Network

Newsgroup: rec.radio.broadcasting

## 23. AMARC Action Network

Newsgroup: rec.radio.broadcasting
Date: 1993-01-08 06:32:19 UTC
From: AMARC@p2.f406.n250.z1.Fidonet.Org
Message-ID: <1993Jan8.063219.21011@gagme.chi.il.us>
Source record: 43911

A solidarity network for community radio
==========

The AMARC Emergency Action Network is an initiative arising from the workshop on solidarity at the AMARC 5 conference in held in Mexico in August 1992. The main purpose of the network is to mobilise the worldwide community radio movement in defence of community radio broadcasters whose right to freedom of speech is threatened.

At the workshop participants, were provided with some actual examples of the types of threats encountered. these included:

* Government and military censorship of the broadcasts of Radio Enriquillo in the Dominican Republic
* Multiple attacks on a Peruvian community radio station by the Shining Path guerrilla movement
* Military occupation of Radio Echo of Moscow during the 1991 coup
* The closing of a campus-based station with anti-racist programming in South Africa
* An unlicenced Afro-American broadcaster in Illinois was the target of an assasination attempt by unidentified persons

A preliminary plan was developed and regional representatives were assigned the task of evaluating the needs and possibilities available to community radio stations in their regions. Based on the reports received and on research conducted by the staff of the World Association of Community Radio Broadcasters (AMARC) in Montreal, Canada we are making the following proposal for your comments and suggestions.

Structure and Operation of the Network
==========

For the purposes of the Network we have divided the world into nineteen regions (this number may change as we develop new contacts and reassess the workload and resources of regional coordinators). Each region has one or more regional coordinators. AMARC's office in Canada will serve an overall coordinating function.

When a community radio station or journalist is in trouble, they will send an "action alert" to their regional coordinator, detailing the problem and suggesting the type of action required.

The regional coordinator will circulate this information within the region and fax or email it to AMARC's head office. AMARC will translate the alert and send it, in English, French and Spanish, to the regional coordinators for distribution to participating radio stations and institutions in their regions.

## What is an Emergency and What Kind of Action?

The Network will use a broad definition of emergency as any real or threatened censorship, violence, legislative interference, military or police intervention etc. that seriously restricts a station's ability to serve its community.

Since the purpose of the Network is to help defend threatened stations, each alert will include some suggestions for actions to be taken. Requested actions could include sending letters or faxes of support or protest, emergency funding campaigns, or publicizing the situation to listeners.

## Responsibilities of Regional Coordinators

1) Regional Coordinators will contact radio stations and institutions in their regions to let them know of the existence of the Network and how it operates. Radio stations should be aware of how to contact the Coordinator if they require support from the Network and they should know that they may be called upon to support other stations.

2) Regional Coordinators will receive action alert requests directly from radio stations in their region and from other regions via AMARC. Alerts coming from their region will be immediately transmitted to AMARC for worldwide distribution.

3) Regional Coordinators will distribute action alerts to participating radio stations and institutions in their regions.

4) Regional Coordinators will attempt to find local financial and other support for the Network's work within the region.

While our immediate goal to deal with one action alert monthly is a relatively modest one, it is clear that the work of the Regional Coordinators will take time and resources. For this reason we have tried to identify Coordinators who have the time, institutional support, and resources to do the work.

## AMARC's Responsibilities

1) AMARC will receive action alert requests from Regional Coordinators or directly from radio stations or

broadcasters. Requests will be evaluated and appropriate
action will be decided on.

2) Once the decision is taken to circulate an action alert
in the network, AMARC will immediately translate the request
and transmit it by fax or email to the Regional
Coordinators.

3) AMARC will coordinate periodic evaluations of the
Network's work.

Comments and suggestions on the above proposal are welcome.

## 24. Re: How to Prepare For the Startup of an AM Radio Tower Nearby

Newsgroup: rec.radio.broadcasting
Date: 1993-01-08 06:32:32 UTC
From: rerickso@cwis.unomaha.edu
Message-ID: <1993Jan8.063232.21029@gagme.chi.il.us>
Source record: 43912

The last I know, management of a broadcast station is
required to satisfy complaints of broadcast interference only
if the field intensity is greater than 1 millivolt per meter of
antenna. Otherwise the FCC does not obligate the broadcaster
from what I know.

On cancer and electricity, it is believed that the frequency
and intensity of the electric field is a factor. Living
near high voltage lines could be a problem. Everyone knows
that microwaves can cook food. The other day I heard on a
radio program that people who use hand held cellular telephones
might be getting cancer from that RF radiation.

Write to the U. S. Government Printing Office for the
Federal Communications Commission Rules and Regulations.

You might be able to do what you want non-commercial but
I am not 100% for sure. If you have a commercial license
you have to operate so many hours per day just to stay legal
unless the channel is shared with another local station.

The minimum power for a Class A FM station is 100-watts
effective radiated power (actual power at antenna times
gain of antenna over an ideal dipole antenna).

## 26. Chicago rating.. Stern is 17th.

Newsgroup: rec.radio.broadcasting
Date: 1993-01-08 06:33:27 UTC
From: rrb@airwaves.chi.il.us
Message-ID: <1993Jan8.063327.21098@gagme.chi.il.us>
Source record: 43914

After nearly three months on Chicago's WLUP-AM, Howard Stern has shown up at an abismal 17 th place in The Arbitrons. Stern who has shown great success in other markets where his syndicated morning show is broadcast, just has not seemed to catch on here in the Windy City.

Conversly, Steve Dahl and Garry Meier, long time Chicago radio favorites are in fourth place behind urban contep. WGCI-FM, CBS newser WBBM-AM and full service WGN, which holds the number one slot with a commanding 12.3 share, almost double that of the #2 ranking WBBM-AM.

In the Chicago Sun-Times' Robert Feder column, thursday Jan. 7, Stern is paraphrased to have said that he (Stern) plans to be Chicago's #1 rated personality within a year, I guess he has a long way to go.

Here are the Chicago ratings as published in the Sun Times.

Note Format info supplied by me, not the Sun-Times.
Nostalgia = 40's thru 60's non-rock oldies.
Although WVVX-FM is listed as Brokered, it's showing in the ratings is largely due to its heavy metal block of programming at night.

(d) = Datime only
(City Name) = City of license or transmitter site (in Illinois unless noted)

Station | Format | Fall share | Summer share| City (if not Chicago)

1 WGN-AM Full Service 8.5 6.8
2 WGCI-FM Urban 7.6 7.2

## 27. "Supertrains" Author Claims Talk Show Record

Newsgroup: rec.radio.broadcasting
Date: 1993-01-08 06:37:12 UTC
From: Nigel Allen <nigel.allen@canrem.com>
Message-ID: <1993Jan8.063712.21214@gagme.chi.il.us>
Source record: 43915

Here is a press release from Joseph Vranich.

"Supertrains" Author Claims Talk Show Record
To: National Desk, Transportation and Media Writers
Contact: Joseph Vranich, 703-354-6309

ALEXANDRIA, Va., Dec. 31 -- Talk shows reached a new level of acceptance last year as political candidates and industry leaders sought exposure on America's airways in unprecedented numbers.

Another sign of the popularity of such shows is that an author is claiming to have set a talk show record.

Joseph Vranich, author of "Supertrains: Solutions to America's Transportation Gridlock" (St. Martin's Press), made 130 radio and television appearances during the year with 103 qualifying as talk shows, most with call-ins from the public.

"I'm establishing a new entry for the record books," said Vranich. "I'm open to the possibility that another author could have done better, but if so no one seems to know about it."

President-elect Bill Clinton helped bring attention to "Supertrains," calling it a "great book," while others including Lufthansa Airlines Chairman Jurgen Weber also praised it.

Said Vranich: "I've searched the record books and could not find a category for talk show appearances. Carol Nashe, executive director of the National Association of Radio Talk Show Hosts, based in Boston, has acknowledged that "we do not know of any record established for appearing on talk shows."

Vranich appeared on stations from coast to coast. Some were in-studio shows he did while traveling to give speeches but most were by telephone. Vranich kept records of his appearances, which can be confirmed by logs maintained by broadcasters.

The Clinton administration is expected to start a program to build high-speed train systems and that has sparked additional interest in "Supertrains."

> Album Oriented Rock - seemed like a step forward at the time, too.

I certainly don't remember thinking of it as a step forward. I always thought of it as a very crass attempt to canonicalize, in a more easily digested form, the sort of broadcasting that was being done on free-form stations. Coming from the world of Top-40, I suppose it was a step forward in terms of looser playlists, but coming from the world of KMPX/KSAN/et al., it was just another dillution of something that was too hard for the business department's to sell.

# 30. REQUEST FOR IDEAS AND DEMO TAPES FOR AIR ON CHICAGO STATION

Newsgroup: rec.radio.broadcasting
Date: 1993-01-08 06:38:32 UTC
From: topcat@casbah.acns.nwu.edu
Message-ID: <1993Jan8.063832.21305@gagme.chi.il.us>
Source record: 43918

Hi everyone,

I'm the Freeform Producer at WNUR-FM and I'm looking for ideas, and demo tapes for possible airing on the Freeform show.

Let me first give you some background info. WNUR is a 7.something kilo-watt college radio station serving the Evanston-Chicago area. The Freeform show is a place where Deejays can experiment all kinds of different radio formats that you would never hear anywhere else. We do stuff ranging from experimental comedy to poetry/gospel. The Freeform represents the ultimate in creative broadcasting.

The Freeform Show schedule is as follows:

monday mornings from 2-5am
tuesday thru friday mornings from 3-5am
saturday morning from 3-7am
sunday morning from 1am-7am.

If you have some creative ideas for a show, or have made a creative demo tape, I'd love to hear them. Please write to the following address:

Freeform Show
WNUR-FM
Evanston, IL 60208-2260

If you send demos, I give no garantees that they will be played, I but would definitely e-mail you an evaluation.

Kelly
Freeform Producer for WNUR-FM

[Moderator's Note: Yes it is true that WNUR is 7 kw, but their antenna is less than 100 feet above ground (i think it is about 70'). They co-exist on the same frequency with WKKC-FM from Kennedy-King College on Chicago's south side. Many years back WNUR was given a choice to either boost power from 1 kw to 7 kw -OR- keep their 1kw power and increase height to some 300 feet. IMHO they took the wrong option since their signal is no better than WLUW from Loyola which runs 100 watts from about 500'. Shame really. because WNUR is a fine station. Bill]

## 31. Re: Joe Frank

## 32. KGAY radio reviewed in my local paper -- summary follows.

Newsgroup: rec.radio.broadcasting
Date: 1993-01-08 06:43:00 UTC
From: Robert Smathers <roberts@triton.unm.edu>
Message-ID: <1993Jan8.064300.21495@gagme.chi.il.us>
Source record: 43920

Rick Nathanson, the Albuquerque (New Mexico) Journal's media writer, wrote up a column about KGAY and I thought I would, in my own words, sum up what was in that column.

It is from the Wednesday January 6, 1992 edition of the Albuquerque Journal and headlined "Colorado Site of First Gay-Lesbian Radio Station".

From Denver, Colorado comes a 24 hour, satellite radio station that is owned and operated by gays, lesbians, and bisexuals called KGAY.

It can be received with a C-band satellite system (and I'll post the locations at the end of this post).

KGAY is available to nearly 4 million home dish owners in the Continental U.S., Hawaii, Alaska, Mexico, Canada and the Carribean.

KGAY is trying to get their programming played on AM radio stations and on cable systems.

According to Dan Radcliff, program director at KGAY, he said the response has been positive since the November 28 launch of the station. They have gotten good press from the major press in the U.S. as well as from radio networks in Australia, Germany, and Japan.

KGAY began broadcasting shortly after Colorado voters approved a state constitutional amendment that denied gays and lesbians civil rights protection.

Clay Henderson, the President and General Manager of KGAY, dreamed up the idea for this station when he was house-sitting in a remote island in Washington State. He was only able to get entertainment by a satellite dish. He discovered satellite radio and decided to put together a network to be distributed by satellite radio.

Henderson had previously been involved in profit and non-profit gay and lesbian radio broadcasting.

Henderson moved to Colorado because he knew it was the business center of the international cable television industry and he knew that would allow KGAY to be closer to sites for signal distribution.

(this following paragraph is taken word for word what Nathanson wrote):

Of the 1,200 phone calls received at the station, a small percentage was negative, he acknowledged. "It was pretty juvenile stuff, like people asking, `Hey! is this K-Fag?' None of the calls was life-threatening, but some were meaner than others."

(back to my own words summary)

Radcliff says the network is two years ahead of schedule as far as signing up cable systems and AM radio stations. The first AM radio station affiliate was KXRE-AM in Colorado Springs.

[end of summary]

Locations for KGAY on Satellite Radio:

KGAY can be heard on satellite radio in two places... Galaxy 5/6 (scrambled CNN's location) on the audio subcarriers 6.30 and 6.48 MHz and on Galaxy 6/17 on audio subcarrier 8.30.

Message-ID: <1993Jan8.064315.21525@gagme.chi.il.us>
Source record: 43921

Many oldies and classic rock stations compile a top 500 (or other convenient number) list of favorite songs as voted by their listeners. WCBS-FM in New York has compiled a list every two years since they started their oldies format 20 years ago. In the Still of the Night by the Five Satins has consistently been the number one song. I am interested in knowing what has been the number one song for oldies and classic rock station over the USA and Canada. Please e-mail to me number one songs from respective radio stations and I will compile a list for the bulletin board.

Bruce Slutsky

> the extended portion ??

Recently, the FCC has been moving TISes INTO the AM broadcastband, presumably in preparation for the AM band expansion. West Liberty, Iowa TIS has been on 690 kHz. for some time now, and the latest "DX News" (National Radio Club) lists several new `in band' allocations. Interestingly, it's not just the 1610 TISes that are moving -- some ex-530 kHz ones are too. Perhaps for a `someday' expansion of the band DOWN from 540? Hmmmmm...

I believe all new cars' AM radios go to 1700 - and have for several (maybe 5?) years. My new 1993 Dodge Grand Caravan SE's does ... and has AM stereo to boot :)

> [Moderator's Note: There is a 400 watt DA-2 station on 540khz in
> Jackson Wisconsin [...]
> Never underestimate the ground conductivity at such low

Airport beacon UOC, 524 kHz, Iowa City IA is (or at least was 5 years ago) audible daytime in Chicago. Distance: 210 miles; power: 25 watts!

Can any r.r.b readers confirm daytime reception of CBK, 540, Watrous Sasketchewan? With 50kw non directional, I've heard they reach almost to Denver ... or even better, 250 kw (yes, 250 KW)

XEWA-540, San Luis Potosi, Mexico?

> Bob Carpenter

Earl Higgins

[Moderator Asks: Does anyone know if this city of Roxbuy Mills MD is anywhere near the city of Germantown MD? That is the location of the new radio station which has that other poster up in arms (the thread is called 'preparing for the startup of a new station.. or something like that). Since she said that there were 4 'tall' towers, I was just wondering if it could be the same station. Anyone know? Bill]

## 35. Coverage at low frequencies on MW (AM)

> 5000 watt station in Bismark N.D. (on 550) claimed to have the greatest
> daytime land coverage of *ANY* AM station in the country. They emphasized
> that they meant "any and all, regardless of power". Never underestimate the
> ground conductivity at such low frequencies :-). Bill]

Bill,
The ground conductivity is GOOD in your area, but not-so-hot down this way. Looking at the map in my old FCC rules shows conductivities of 8 and 12 up your way, but 2 and 4 down here. Thus, 0.5 mV coverage, even on a good freq like 540, will go only about 1/3 to 1/2 as far in this neck of the woods. I can't hear the present WDMV from the NW DC suburbs; I hear Canonsburg, PA, (7.5 kW day) and others instead.

On my yearly Christmas drive to the Cleveland area I marvel at how much better AM stations cover in that area (where the ground conductivity is 8). WKTX, 830 1kW, near the PA border, carries ads for businesses in western Cleveland. WRMR (850 10kW), Cleveland, is OK even farther E on the Tpk.

Regards, Bob Carpenter

>I am curious as to whether the quality has been improved or whether
>they are the same (audio) quality programs that are available on
>same and tapes.

I was talking with a friend I've worked with over the years, Art
Merril, who used to have a radio talk show in New York (many years
ago). He had previously been a radio engineer and in his spare time
dug around in the basement and came across the original wire recordings
of the Shadow and Lone Ranger, copied them onto tape, and started
playing them again on his show in Miami. The wire recordings were of
rather poor quality, only intended to last until time delay replay to
the west coast, but he said that most of them were still audible. The
CD's are probably mastered off of his tapes or their decendents.

## 39. : Re: Chicago ratings..

Newsgroup: rec.radio.broadcasting
Date: 1993-01-11 08:09:21 UTC
From: Liron Lightwood <r.lightwood@trl.oz.au>
Message-ID: <1993Jan11.080921.2001@gagme.chi.il.us>
Source record: 43928

Thanks for posting the Chicago ratings. I am very interested in these, especially when it comes to looking at the relative performance of pop based formats (CHR, top 40/dance, urban, etc), both individually and collectively (as a total of overall audience share).

You write:

>Station | Format | Fall share | Summer | City (if not Chicago)
...
> WGCI-AM Urban oldies 1.5 1.5
...
> WTMX-FM Mix - AC 1.5 2.1
...
> WYSY-FM AC 0.7 0.7 (Bloomingdale )
...
> WJPC-FM Light Urban 0.4 0.5 (Lansing Class-A)

Could I ask you about the above formats? What is Urban oldies? I understand Urban contemporary to mean popular dance, rap, and some R&B. What kind of music would be considered Urban oldies?

On a similar note, what is Light Urban?

Also, how does Mix AC differ from straight AC? I have seen the work 'Mix' in the names of various stations here and there, there's even one in Australia, and I was wondering what it's all about.

Thanks in advance.

[Moderator's Note: Well, like I said in the article, some of the format descriptions were of my own creation. I will attempt to explain.
Urban Oldies means soul and R&B style oldies from the 60's and 70's. Supremes, Temptations, etc. They call themselves "Dustyradio". Mix-AC is my term for an AC that plays a wider variety of music from longer ago and mixes it with the current AC fare. It is not uncommon to hear The Beatles in the same set with Madonna, Garth Brooks and Petula Clark. Light Urban is current Urban (read Black) artists, but lighter, slower songs. In the case of WJPC-FM, they call themselves 'The Smooth Touch', this format is big with young black women. Hope that Helps. - Bill]

I have sucessfully prepared applications that have resulted
in grants for FM non-coms and translators;

$5000 will let you stick your foot in the door...
Plan on 10,000 + just to get a license.

Therefore, you must be pretty serious to go for it.

## 41. WNEW 1130 - now WBBR

Newsgroup: rec.radio.broadcasting
Date: 1993-01-11 08:09:59 UTC
From: joec@fid.Morgan.COM
Message-ID: <1993Jan11.080959.2060@gagme.chi.il.us>
Source record: 43929

The NY radio station WNEW AM 1130 was mentioned as changing over
to call letters WBBR and has a new radio format.

WBBR is apparently owned by Michael Bloomberg. They mention
his name prominently on the station, i.e. 'This is Bloomberg
radio'.

Michael was a former Partner at Salomon Bros in the 1970s. I believe
he ran their Equity desk and then ran their Data Processing division.

He left Salomon Bros in the early 1980s and formed Bloomberg Associates.
This company was (I think) partially funded by Merrill Lynch. Bloomberg
Associates built and rented out Bloomberg Terminals which were a view
of the dealer market in the Fixed Income area, i.e. it included prices and
many analytics. It was rumored that these terminals rented out for
$1000/month and Merrill Lynch had many hundreds. This product has since
spread to other brokerage houses. It is supposed to be the best product
in its class. To my knowledge, Bloomberg Associates is privately held.

I'll bet WBBR is his latest business venture and he is in competition
with WBBR against WINS (1010khz) and WCBS (880khz), both all-news radio
stations in NYC. WBBR was rumored to focus more on business as his niche in
the crowded NY radio market. It will be a tough sell - WCBS has NY mayor
Dinkins and NY Governor Cuomo on every month for listener call-in. WINS
I think is the top rated radio station in the NY area.

On a personal note, I met Michael in the mid 1980s and was impressed.
I wish him well in his latest venture.

## 43. Howard Stern comes to Buffalo radio!

Newsgroup: rec.radio.broadcasting
Date: 1993-01-11 08:13:58 UTC
From: lhpalter@nexus.yorku.ca
Message-ID: <1993Jan11.081358.2176@gagme.chi.il.us>
Source record: 43932

Howard Stern's national morning radio program, broadcast live from New York City will debut on Buffalo's WWKB-AM (1520) on Monday January 11th, 1993. WWKB's Program Director says Stern will be on technically from 6-10 am (eastern) but says he'd even be on past 10, "depending on what Howard wants. He could be on till 11, yesterday he was on until 10:20". This news will also interest listeners in Toronto and the rest of Southern Ontario, as WWKB's signal reaches quite well across Lake Ontario, and will give Western New York and Ontario listeners a sampling of Howard's raunchy, and, heretofore very costly, radio programs.

[Moderator's Note: Same here in Chicago. He is on WLUP-AM, a 50,000 watt station that is heard in five states during the day. However despite the reach, and the fact that WLUP-AM is known for off-the-wall programming, Stern is rated at only 17th in a market of some thirty stations (not including some low powered suburban outlets that don't cover the whole city). Other WLUP personalities, like Steve Dahl and Jonathan Brandmeier hold on to commanding leads ver Stern, coming in forth overall and first with 25 -54 yearolds. Could it be that Mr Stern has reached his peak and may be cooling off a tad? - Bill]

From: "A.J. Janschewitz" <p00258@psilink.com>
Message-ID: <1993Jan11.081429.2240@gagme.chi.il.us>
Source record: 43933

First, a thanks to Bill for a well-run and interesting net group.

Now, a couple of questions:

1. I've read here about the expansion of the American AM band to 1700 KHz. Is this correct? Is this in effect already? Does the FCC have plans to give them over to special services, or minority preferences? I haven't seen receivers yet that call AM 540-1700 ...

2. I've also read about a device called a "Ramsey FM-10." It even has its own news list. What is it? Is it an exciter? A low-power transmitter? A prefab pirate station?

Many thanks.

==a.j.==
Broad Brook, Connecticut, USA

[Moderator's Note: A.J. as I said in e-mail, the group is only as good as it's posters. We are fortunate, indeed, to have so many great minds who care enuff to keep the group interesting. Keep up the great work yourselves! As for the Ramsey FM-10, it is a highly stable FM stereo transmitter kit which has been the subject of much controversy due to the ease with which it can be modified for illegal power output levels. For more info, read and post to alt.radio.pirate. If you cannot get that group, write me and I'll send you the address of a mailing list dedicated to the FM-10 kit and it's many uses. - Bill]

>from what I know.
>
This isn't correct. Actually it is 1 VOLT/meter field strength, which is a lot of signal. Being within a few blocks of a 50 kw AM radio station would produce this. This is called 'blanketing' interference.

>On cancer and electricity, it is believed that the frequency
>and intensity of the electric field is a factor. Living
>near high voltage lines could be a problem. Everyone knows
>that microwaves can cook food. The other day I heard on a
>radio program that people who use hand held cellular telephones
>might be getting cancer from that RF radiation.
>
The direct, immediate concern is the wavelength, which is inversely proportional to frequency. In order for the EMF to cause cell/DNA damage, the wavelength needs to be comparable to biological intracellular distances. The wavelength at 60 hz is many miles, and it would be impossible for individual cells to absorb and be changed by such energy. At celfone and microwave frequencies, you're still into centimeters generally. However, at the tiny angstrom unit wavelengths of UV light, X-rays, gamma rays, direct biological cell damage will occur.

So, the only time I worry about EMF is when I go out in the noonday sun.

The only certain ill effect from RF exposure is, as you suggest above, heat. This poses a threat upon prolonged exposure to the testicles and the eyeballs, the only two areas of the body that have no good way to dissipate and regulate heat. The incidence of cataracts among broadcast engineers is high, and the relationship with RF exposure is not thought to be simply casual.

AM (i.e. American broadcast band) is less likely to precipitate problems than, let's say, a 200kw UHF plant.

Other problems are as yet theoretical. I can tell you that there was one spot in the transmitter building of a UHF TV where I worked that would make one standing there very dizzy. There's something to the hazards of RF exposure. What, nobody seems to be quite certain.

Your point about cell phones is interesting. Motorola at one time recommended heeping their five-watt VHF "bricks" (the ol' HT-220's) six inches away from the head while transmitting, which cannot be practically done if you are using the internal noise-cancelling mike. Offhand, though, I don't think you're in any danger of defrosting your brain with a cell phone unless and until they figure out a way to pack all three watts into a portable. Even then, it will probably have a talk time of about fifteen seconds between charges ...

## 48. Towers at Germantown, MD (was: Preparing for the Startup of new...)

Newsgroup: rec.radio.broadcasting
Date: 1993-01-11 08:46:45 UTC
From: Robert Carpenter <rc@cmr.ncsl.nist.gov>
Message-ID: <1993Jan11.084645.2893@gagme.chi.il.us>
Source record: 43936

Our Moderator asked whether WDMV's new location-to-be (Roxbury Mills, MD) is anywhere near Germantown, MD. NO, not really. Germantown is in west-central Montgomery Co., and R-M is just outside the east edge of the county. I'm pretty sure the "huge towers" he referred to at Germantown would be ex-WGMS-AM, now WTEM, moving out from Bethesda/Potomac. Years ago they bought a large farm in a sparsely populated area west of Germantown and have been fighting NIMBY (not in MY back yard !!!) opposition to their move. Since they are on 570 kHz, the towers are fairly tall, and they have a box array of four at their present location - a densely populated up-scale neighborhood. At least a few years ago I suspect their present land was worth more than the station's license - which might also be true of WMAL. In any case the the present land was sold to housing developers and WTEM has to vacate.

Our Montgomery county government has accommodated a number of housing-displaced AM stations by allowing their towers on county-owned golf courses. Examples are WNTR (1050) and WMDO (1540) on the same tower on the Sligo Creek course in Silver Spring and WCTN (950) with two towers on the Falls Road course in Potomac. I suppose WTEM's space requirements were just too great to fit with WCTN on the same course - where they'd have to be. Many AM stations in Washington and Baltimore suffer from the problem that their directional patterns protect stations to the SW, NW, and NE of here, yet those are the directions the cities have expanded since the late 40s. Thus the newer suburbs (where younger people live) get little-or-no local nighttime AM service. Some stations have the power/frequency to allow coverage from farther-out transmitter locations, but NIMBY has so far prevented any moves - unless WTEM really has pulled off theirs. I'll look for their new towers the next time I'm out that way.

WTEM bought the Redskins broadcast rights starting with this season. You will note that WTEM is licensed to Bethesda, MD, not Washington, since they don't have adequate night-time coverage in DC. Moving farther out gives further credence to the rumors that they are shopping for an FM to go with WTEM. Their present FM, WGMS, is classical - though they do duplicate the football ---- after the opera is over.

Regards, Bob Carpenter W3OTC

## 49. Welcome to AM/FM DXing (FAQ - File)

Newsgroup: rec.radio.broadcasting
Date: 1993-01-11 08:58:52 UTC
From: fybush@world.std.com
Message-ID: <1993Jan11.085852.3370@gagme.chi.il.us>
Source record: 43937

INTRODUCTION TO AM/FM DXing

By Scott Fybush

One of the easiest parts of the radio spectrum to explore is the broadcast bands. This posting will attempt to offer some hints to make your exploration of the medium wave and VHF-FM bands more enjoyable.

I. WHAT ARE THE AM/FM BROADCAST BANDS?

The medium wave (commonly referred to as AM) broadcast band currently extends from 525 to 1605 kilohertz. Channels are spaced in even 10 kHz increments; i.e.: 530, 540, 550, ... , 1600 kHz in the United States and Canada. Elsewhere, channels are generally spaced in 9 kHz increments, i.e.: 531, 540, 549, etc. In the United States, plans are underway to expand the band to 1705 kHz. Within a few years, stations will begin appearing on the 1610-1700 kHz frequencies.

The FM broadcast band in the United States extends from 88 to 108 megahertz. Channels are assigned at 200 kHz increments; i.e.: 88.1, 88.3, 88.5, ... , 107.9. The channels from 88.1 to 91.9 are reserved for noncommercial educational stations. Outside the United States and Canada, the boundaries and channel spacing vary. In Japan, the band starts at 76 MHz. In Western Europe, the band runs from 88-108 MHz, but channels can be irregularly spaced, i.e.: 101.25 MHz.

II. SIGNAL PROPAGATION

The distant stations you are able to receive will depend largely upon signal propagation. This varies depending upon the time of day, the season, and other factors. For medium-wave, the single most important factor for good DX is the time of day. Medium-wave signals pass through the ionosphere during daylight hours and are lost to space. As a result, all medium-wave signals received during daylight hours will arrive by ground wave. Reception of signals over a few hundred miles away is generally impossible in daylight. At night, however, the ionosphere reflects medium-wave signals, making it possible for signals to be heard at much greater distances, up to a few thousand miles. Reception also tends to be better in winter than in summer. Many smaller medium-wave stations are required to sign off or reduce power sharply at sunset so as to reduce interference to distant stations.

For FM, daylight is unimportant. FM signals generally carry no more than 150-200 miles even under the best conditions. Since the ionosphere generally does not reflect VHF FM signals, such signals

must travel line-of-sight to reach the receiving antenna. FM transmitting antennas are thus usually located as high as possible. Tall towers, high buildings, and mountaintops are common FM transmission sites. Under certain conditions, the E layer of the ionosphere will reflect VHF FM signals, thus making it possible to receive extremely long-distance FM reception. This is almost impossible to predict, however.

III. RECEIVERS

Almost any radio is capable of some broadcast-band DXing, especially long-distance medium-wave reception. However, most recent radios, even those designed for quality shortwave reception, do not have outstanding broadcast band reception. One exception is the General Electric SuperRadio II (Model No. 7-2885F.) The SR II is designed for optimum AM/FM broadcast performance, incorporating:

* RF amplifiers on both bands
* Ceramic filters and Automatic Frequency Control on FM
* An analog tuner with an IC-type receiver chip and air-variable capacitors.
* No PLLs or digital displays for less electronic noise.
* A 2-way speaker system with 1 watt of audio power.

The SR II is a bulky (4" x 10" x 12") portable radio which can be run off 120V AC or 6 "D" batteries, providinover 400 hours of battery life. The styling is cheap silver and black plastic, and has been described as ugly. Nevertheless, this radio has become popular among the DX community for its exceptional performance.

It costs between thirty and sixty dollars in the US, and may be found at many discount outlets. It is generally back-ordered by mail, but can be obtained from Bennett Brothers (Order #R8883) at 1-800-621-2626 or 1-800-631-3838, or from Best Products (Order # 140457) at 1-800-950-2398.

With the sale of GE's consumer electronics division to Thomson, this product's future remains in the air.

If you don't have a SuperRadio, some important things to seek out in a receiver are:

* External antenna connections. These make it easier to use a better antenna than the one supplied with the radio.

* High selectivity. This refers to the receiver's ability to reject strong signals on adjacent frequencies, and is more important to good reception than is sensitivity, since a good antenna will provide more-than-adequate signal strengths.

* Digital frequency display. While the circuitry involved does add to the level of internal electronic noise in the radio, digital display makes it possible to more easily determine what station is being

heard.

IV. ANTENNAS

For medium-wave reception, most receivers have a short internal ferrite rod. This will provide acceptable signals for high-powered distant stations. The ferrite rod tends to be quite directional, and the radio can thus be turned to null out strong interfering signals, or to improve reception of the desired signal.

For more advanced DXing, an external antenna is a must. The easiest external antenna is a simple longwire, 50 feet or more run out the window and then as high as possible (up in a tree, for example.) The wire can be connected to the external antenna terminal. If none exists, you can open up the radio and wrap the wire a few turns around the ferrite rod inside. It is also possible, although less desirable, to simply wrap the wire around the entire radio. If the radio has a terminal marked "ground" or "GND," another wire can be run from this terminal to a copper rod driven a few feet into the earth.

A more advanced antenna is the "beverage" antenna. This is a length of wire 1000 feet or more. It is terminated at the far end with a 450 ohm resistor connected to a metal stake driven into the ground. It should be pointed in the direction of the desired station. The beverage antenna can, under good conditions, be used for transatlantic and transpacific DX. Another more advanced antenna is the loop, a four-foot wooden frame with about 20 turns of wire run around it. It is connected to the radio with a 365 pF variable capacitor for tuning. The loop is extremely directional.

For FM, the important factor is height. The higher one can place an antenna, the better reception will be. A multielement Yagi antenna, which can be found in Radio Shack or similar stores, will often produce excellent reception. Since a yagi is quite directional, the use of a rotor is essential for reception of stations in different directions.

V. WHAT'S OUT THERE TO LISTEN TO?

There are over 10,000 radio stations in the United States alone. It's important to have some idea of what to expect to hear. A good directory is important (see STATION LISTINGS below), but it's essential to know what the station information means.

For medium-wave, US frequencies fall into three basic classes:

* CLEAR CHANNEL: These frequencies are 540, 640, 650, 660, 670, 680, 690, 700, 710, 720, 730, 740, 750, 760, 770, 780, 800, 810, 820, 830, 840, 850, 860, 870, 880, 890, 900, 940, 990, 1000, 1010, 1020, 1030, 1040, 1050, 1060, 1070, 1080, 1090, 1100, 1110, 1120, 1130, 1140, 1160, 1170, 1180, 1190, 1200, 1210, 1220, 1500, 1510, 1520, 1530, 1540, 1550, 1560, 1570, and 1580 kHz. Clear channels are home to one or two 50,000 watt powerhouse signals which can be heard reliably in half the

country or more. Other stations on clear channels usually sign off at sunset or reduce their power considerably. In recent years, the FCC has added many new stations to the clear channels, making reception of some stations more difficult than it once was.

* LOCAL: These frequencies are 1230, 1240, 1340, 1400, 1450, and 1490 kHz. Stations on local channels can use a maximum of 1000 watts. At night, these six frequencies tend to become chaotic, as the hundred-plus stations on each channel cause each other tremendous interference. Identifying distant stations on these channels requires a directional antenna, a good ear, and plenty of patience.

* REGIONAL: These are all the remaining channels. U.S. stations on these frequencies are restricted to 5000 watts. While not as noisy as the locals, reception on regional channels can be difficult. Most regional, or class III stations, use directional antennas to reduce interference with distant stations.

On FM, the American FCC has reduced its restrictions on power and antenna height considerably. Today, FM stations are allowed up to 50,000 watts from a 150 meter antenna in the Northeast and California; 100,000 watts from a 610 meter antenna elsewhere. Many stations, however, serve much smaller areas. These "Class A" stations use only 6000 watts or less. They were formerly restricted to just a few frequencies: 92.1, 92.7, 93.5, 94.3, 95.3, 95.9, 96.7, 97.7, 98.3, 99.3, 100.1, 100.9, 101.7, 102.3, 103.1, 103.9, 104.9, 105.5, 106.3, and 107.1 MHz. While the FCC no longer restricts class A stations to those frequencies, most are still found there. Likewise, only a few of the high-power stations are found on the old class A channels. For stations with extemely high antenna, the FCC mandates that transmitter power be reduced proportionately; thus a station with only 430 watts from a 220 meter antenna will reach about as far as a 3000 watt signal from the usual 91 meter antenna will.

VI. STATION LISTINGS

An essential tool for any DXer is a good station listing. This will help identify what's being received, as well as provide a way to contact the station being heard.

For North American stations, one concise and inexpensive directory is the M Street Radio Directory, published annually. The M Street listing includes frequency, power, directionality, format, address, phone number, and other listings less important to DXing. M Street also is indexed by call letter order and by frequency. The M Street directory costs $29.95 + p/h. It can be purchased directly from M Street at 800-248-4242 or +1 212 473 4668 voice, or +1 212 473 4626 fax. The address is M Street Corp., 304 Park Ave S Floor 7, New York, NY 10010 USA. For FM DXers, the standard guide is Bruce Elving's annual FM Atlas. This includes maps showing every FM transmitter in North America, plus listings by state and frequency indicating power, stereo status, format, subcarriers, and slogans. FM Atlas does not

include addresses or phone numbers. It can be purchased directly from Bruce Elving, PO Box 336, Esko MN 55733-0336. It costs $10.95 + $1.05 p/h.

Other listings include the NRC Log for AM stations and Broadcasting Yearbook, which is available at some larger libraries. The Canadian Almanac and Directory includes call letters, frequency, and addresses for Canadian stations.

For listings outside North America, consult the World Radio TV handbook, published annually and available at bookstores or through radio specialty mail order outlets such as the Radio Collection and CRB Publishing.

VII. TIPS FOR BEGINNING

The most important element for beginning DXers is to get to know the dial. Spend a few hours scanning up and down the dial both during the day and at night. At night, the clear-channel 50kw stations should be easy to hear. Learn all the local stations. Find out which ones sign off at sunset and which stay on all night. This will affect which distant stations can be received. If you have a local station on all night, you shouldn't expect to hear another station on that frequency. Experiment with radio placement. As you turn the radio, observe its directional characteristics.

Prepare a log of the stations you've heard, arranged by frequency. The better you know whatthe dial usually sounds like, the more prepared you'll be for that unusual catch.

VIII. SOME ADVANCED IDEAS

Once you've mastered the basics, here are some suggestions for areas of specialty DX:

* QSLing. Most AM/FM broadcasters aren't used to QSLing. You'll probably have to send a letter to the station's chief engineer. Expect verification in letter form. Small stations are often excited to find out they've been heard thousands of miles away.

* DX Tests. A few stations still run special DX tests. Some daytime stations run experimental tests with their daytime power after dark. Others will assemble special DX programs for distant listeners, often late Sunday night/Monday morning, when some stations sign off for maintenance (although not as many as used to do so.)

* Sunrise/sunset DXing. Interesting medium-wave DX can be had when your receiving station is in darkness, but a target transmitter is still in daylight. It's possible to hear distant daytime-only stations this way. This requires a lot of skill, since there may be only ten or fifteen minutes in which to try.

* FM Subcarriers and Stereo. FM stations are allowed to transmit separate programming on a subcarrier. This requires a special decoder

(the best source is Bruce Elving's FM Atlas; see address above.)
FM stations use their SCA (Secondary Communications Authority) subcarriers for transmitting data, background music, ethnic programming, and more. Some AM stations now transmit in stereo. With an AM stereo receiver, you can hear stereo signals from thousands of miles away.

* Transatlantic/Transpacific DX. Some DXers in North America specialize in trying to receive signals on the medium-wave band from across the ocean. This requires outstanding propagation characteristics and plenty of patience.

* Meteor Scatter. The most masochistic of all FM DXers attempt to hear FM signals reflected from --yes, it's true-- meteors in the atmosphere. These DXers learn to identify stations on the basis of a few seconds' listening.

* Tropospheric Ducting. Under certain atmospheric conditions (usually very early mornings), FM signals will be carried long distances through a "duct" in the atmosphere. This is difficult to predict, but can result in long-distance FM DX.

IX. IDENTIFYING YOUR CATCH

Radio stations in the United States are required to identify with their full call letters and city of license once an hour, between 10 minutes before and 10 minutes after the top of the hour. Canadian stations are never required to identify, and many never use any identifier other than "Q107" or "Toronto's 590 AM." It's therefore important to use other clues:

* Time announcements. These can tell you at least what time zone a station is in. If there's only one or two stations on a frequency in a given time zone, this makes identification easier.

* Format. If you have a list of stations that includes formats, use it. That includes knowing what network a station uses, whether the station uses a satellite-delivered music format, what slogans the station might use, etc.

* Local color. You might be able to hear names of cities or streets or notable local personalities mentioned during commercials, newscasts, talk shows, or weather forecasts. If the announcer says, "Here's the weather for the beaches today...", the station you're hearing probably isn't in North Dakota. Likewise, if the forecast is snow flurries and six degrees, you're probably not hearing Miami. These clues are among the most valuable.

X. CONCLUSION

Broadcast band DXing is an exciting way to hear the sounds of cities and towns around the nation and even around the world. It doesn't necessarily require thousands of dollars of expensive equipment or

huge antennas on the roof. All it asks of the would-be DXer is time, patience, and knowledge. Have fun!

THANKS TO...

Bob Foxworth, Garret W. Gengler (antenna ideas), Bob Parnass, Paul Schleck (SuperRadio II information), and Bruce Werner, along with anyone else I may have forgotten.

Message-ID: <1993Jan13.111754.11809@gagme.chi.il.us>
Source record: 43938

[Moderator adds: This was found floating around on rec.radio.shortwave.
It had to do with someone receiving a remote feed from a Florida radio
station on their general coverage receiver. Anyone have comments? Bill]

This talk about WFLA brings a thought to mind. Just a few years ago, in what
was called the Iron Curtain countries, some poor soul could become a
criminal by just tuning his radio dial to the "wrong" station. Well,
Communism fell. The jamming stopped, for the most part, and now, citizines
of those countries can tune their radios to almost anything they please.
The U.S. Congress, (best politicians money can buy), thought that
it would be really neat to eradicate the problem of electronic snooping
on mobile telephones by spreading ink on paper rather than providing for
encoding of the signal. The broadcasters bought a few drinks or Lord knows
what for the right folks and broadcast remote pickups were also included
in the Electronic Communications Privacy act.
The bottom line, here, is to be careful. If you don't want to be
carted off to jail and become a real live criminal, you will have to
report any remote broadcast DX from one of the freeer countries in the
world. The ECPA, in its present form represents a truly dark chapter in
American law since it unknowingly makes criminals out of almost anybody with
a general coverage receiver. So what if it hasn't really been inforced;
it is there just waiting to trip somebody up. It is the legal equivalent of
a fraid electrical cord or missing stop sign.

## 51. Whad'ya know?

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 07:39:59 UTC
From: pedersen@seas.smu.edu
Message-ID: <1993Jan15.073959.3857@gagme.chi.il.us>
Source record: 43939

I moved to Dallas, TX last summer and was disappointed to find that Whad'ya Know? (with genial host Michael Feldman) produced by American Public Radio does not seem to be broadcast here. If broadcast live if is on Saturdays 10 - 12 am (Central time) although some stations are known to tape delay it.

Can anyone give me a station that I might be able to pick up here in Dallas that carries the program?

Thanks,
Ted Pedersen

The article on MW DXing contains a fundamental error about ionospheric propagation of radio signals.

I have e-mailed the poster of this article several times following its appearances in rec.radio.broadcasting and rec.radio.shortwave but I have not received any response and the incorrect information continues to appear so ...

> II. SIGNAL PROPAGATION
>
> The distant stations you are able to receive will depend largely upon
> signal propagation. This varies depending upon the time of day, the
> season, and other factors. For medium-wave, the single most important
> factor for good DX is the time of day. Medium-wave signals pass
> through the ionosphere during daylight hours and are lost to space.
> As a result, all medium-wave signals received during daylight hours
> will arrive by ground wave. Reception of signals over a few hundred
> miles away is generally impossible in daylight. At night, however,
> the ionosphere reflects medium-wave signals, making it possible for
> signals to be heard at much greater distances, up to a few thousand
> miles.

Medium-wave signals do NOT pass through the ionosphere during daylight hours - they are largely absorbed by the D layer. Sky-wave propagation by ionospheric refraction by the E and F layers is possible at night because the D layer is then effectively absent.

For a full, technical discussion of this subject, see "Ionospheric Radio" by Kenneth Davies, published by Peter Peregrinus Ltd. on behalf of the IEE - ISBN 0 86341 186 X

Scott, i have been an FM DXer for many years and have consistantly noted that when there is a high continuous cloud cover that DX signal level dramatically increase. Is this tropospheric ducting? Also, how often does the E layer ducting happen? I have to draw a line at the meteor scatter method.

## 55. FCC takes action to make C-QUAM standard for AM stereo

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:04:32 UTC
From: allegra!rfc@allegra.att.com
Message-ID: <1993Jan15.080432.4685@gagme.chi.il.us>
Source record: 43943

In the Jan 6, 1993 issue of _Radio World_, page !, an article "FCC takes action to standardize C-QUAM" says that the FCC issued a "notice of proposed rulemaking (NPRM) to adopt Motorola's C-QUAM as the single approved transmission standard in USA. Stations using some other system, like Khan's ISB, would have to stop using them before one year is out from the rule being established. FCC makes the rule contingent on fair & reasonable patent licensing terms.

Congress passed a law, which amoung some other unrelated stuff, makes the FCC make a selection.

Some FCC commisioners were not too excited by this NPRM. Sikes says that "What's been lacking (in the acceptance of AM stereo) is a critical mass" of broadcasters opting to convert to stereo. This guy opposed the selection of a single standard. This lack of a critical mass he says is a validation of the correctness of marketplace approach to selecting the standard.

My opinion/observation follows...

Go figure... If they don't select one standard, but give a "choice" of 5, am I gonna risk picking a standard that will not be the one most everyone else picks? And then I gotta toss it out, and spend more money installing another? I'm gonna wait. And if everyone waits, then it looks like noone is even interested in stereo even if there was only one standard.

...end of opinion...

Comments on this NPRM are due April 5th, replies due April 20th.

## 56. Dallas Ft Worth Radio Ratings

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:04:54 UTC
From: "Chip (C.D.) Kelley" <chipk@bnr.ca>
Message-ID: <1993Jan15.080454.4709@gagme.chi.il.us>
Source record: 43944

Here are the top 20 stations listed in today's DALLAS MORNING
NEWS (DMN always just lists the top 20):

# Station Format Summer Fall What happened this quarter
1 KSCS 96.3 country 9.5 9.8
2 KPLX 99.5 country "K-Plex" 5.6 6.0
3 KVIL-FM 103.7/
KVIL 1150 AC 4.8 5.6
4 KJMZ 100.3 urban "100.3 Jamz" 5.8 5.0
5 KTXQ 102.1 AOR "Q102" 3.8 4.5
6 KKDA-FM 104.5 urban "K104" 4.0 4.4
KDMX 102.9 AC "Mix 102.9" 4.0 4.4
8 KYNG 105.3 hit CW "Young Country" 5.1 4.1
9 WBAP 820 country, talk, sports 5.4 3.8 added Rush Limbaugh
10 KRLD 1080 news, talk "News 1080" 3.2 3.3
11 KLRX 97.9 soft AC "Lite 97.9FM" 3.6 3.2
12 KEGL 97.1 rock CHR "Eagle" 2.7 3.1
KLUV 98.7 oldies "K-Love" 2.9 3.1
14 KLIF 570 talk "Talk Radio 570" 2.8 2.9
KLTY 94.1 contemporary christian 2.2 2.9
16 KZPS 92.5 classic rock 2.9 2.8
17 KDGE 94.5 modern rock "Edge" 2.4 2.7
WRR 101.1 classical 2.3 2.7
19 KOAI 107.5 new age/jazz "Oasis" 1.1 2.6 switched from rock AC KCDU
20 KHKS 106.1 CHR "106.1 Kiss FM" 3.5 2.3 switched from new age KOAI
KAAM 1310 SMN standards 1.8 2.3

KESS 1270 Spanish "La Fabulosa" 1.9
KKDA 730 black oldies, talk 1.9
KDZR 99.1 SMN Z-Rock "Z-Rock" 1.5 calls were KJZY
KSNN 94.9 country "Sunny 95" 1.5 switched from oldies KODZ
KHVN 970 black gospel "Heaven" 1.4
KGBS 1190 CNN news, talk 1.0 lost Rush Limbaugh

KVIL-FM/AM's ratings are probably a bit higher; the DMN always forgets
to include the AM. KOAI's switch to KHKS, and KCDU's switch to KOAI
happened about a month into this ratings period. This is KYNG's first
decline since debuting (3.1-4.1-5.1-4.1). KKDA-FM continues to fall
behind KJMZ. KKDA-FM may have real problems when Tom Joyner quits
KKDA-FM & WGCI-FM this year. KEGL is Howard Stern's station. He has
yet to spawn incredible ratings for KEGL despite a lot of promotion
around town, although KEGL was up despite getting a CHR competitor
(their first competitor since KHYI died Oct 91).

## 58. Late nite talk show - KMOX

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:09:38 UTC
From: "John D. Kimple" <KIMPLE@vax.cns.muskingum.edu>
Message-ID: <1993Jan15.080938.4892@gagme.chi.il.us>
Source record: 43946

I'd like to preface this by saying if it sounds like I'm venting my spleen, I apologize.

Anyways, in the last few weeks i've ben listening to late nite talk shows - something I haven't done in awhile - while at work. Thursday night/Fri morn, I called KMOX's late night show, and was on hold for air for over an hour. Yes, over an hour! Within that time, there were replies to other calls taken while I had been on hold - so, he did NOT take the calls in order. I hung up in disgust.

Not knowing what motivated me, I called again Fri night, managed to get on the before anybody. Yes, got on the air, but was treated rather rudely because I made the comment that I have done alot of research on the Iraq/Kuwait/Mid East situatgion , and that alot of people seemed to be gung-ho about "goin' over ther and kickin' butt," and that this is probably not the best course of action.I was treated very rudely. He demanded to not be interrupted, but interrupted me several times. I tried to talk in a polite, rational manner, and the host seemed very short with me, and proceeded to a) cut me off then and there with no chance to really expain my view, and b) after I mentioned I spoke with several college proffessors about this matter , he said "I didn't think there were any fuzzy-headed professors left after Viet Nam." (No, they weren't fuzzy headed - rather far from it, actually)

I do not want to dispute his conservative stance, as it seems, but wanted to discuss this matter, not argue about it. For a man who tries to come off as an intelligent individual, he seemed quite the oposite. Having been away from talk radio from soem time, is this the state of affairs in talk radio?

As a side note, I had called the host of the earlier show, and was treated politley, my question was answered, and an intelligent (but short) discussion was had.

jd
kimple@vax.cns.muskingum.edu

ps - I am willing to entertain any discussions (not bitter arguments) about the above mentioned topics.

[Modeator's Note: Gee, if you had not mentioned the time of day, I would have thought you had called Rush :->. Bill]

## 59. 540 kHz

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:10:21 UTC
From: John Hendry <HENDRY@ETSUADMN.ETSU.EDU>
Message-ID: <1993Jan15.081021.4958@gagme.chi.il.us>
Source record: 43947

In regards to hearing Canada, or Mexico on 540, here in northeast Texas all we can hear is the religious station on 540 in the Dallas metroplex. However, I do have one interesting DX story to tell.
I was working as Sports Director, Assistant Program Director, Production Director, Gardner and Chief Engineer at KXYL AM/FM Brownwood, Texas a few years back. Our FM was having a lot of problems, and I could only manage to get about 10,000 watts erp out of it (on a 400 foot stick). I had to travel to San Angelo, about 90 miles west of Brownwood. When I got about 20 miles away from Brownwood, our signal began to fade, and I started hearing another radio station on our frequence (104.1 mHz). They gave a weather forecast and said the temperature was 26 celcius. My wife and I looked at each other and wondered what in the world we had.
It turns out that we were listening to CKQX, licensed to Selkirk, Manitoba, near Winnepeg. They were 100 kw at 400 feet, and were blowing me away in Texas!!! Weather conditions were cloudy, but no storm systems in or near the area.

## 60. Expanded AM band delayed

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:10:28 UTC
From: allegra!rfc@allegra.att.com
Message-ID: <1993Jan15.081028.4978@gagme.chi.il.us>
Source record: 43948

In the Jan 6. 1993 issue of _Radio World_, page 8, an article "Expanded Band Delayed" tells that the expanded band has been delayed for several months. FCC declined to say what caused the delay, but said that once the problems are worked out, the FCC will begin processing applications for the new freqs. Resolve problem before end of the year maybe.
Article says that the problem is reportedly a disagreement with the National Telecommunications and INformations Administration NTIA over the Travelers Information Services TIS. (which is the low powered AM transmitters used to give info to people in cars about traffic, weather, and such) Most of these are located at 530KHz. The FCC wants to allow the TIS to operate on a secondary non-interfering basis anywhere on the new band at 1610-1710KHz [so much for DXing].
The NTIA and NAB wants the service to be on 1710 and or 530KHz only. [me too!]. Another issue, now resolved, was a treaty with Mexico on frequency coordination of the expanded band in border areas.
[how about Canada?]

[Moderator adds: Along with 530, a great many TIS stations already operate on 1610khz (most of them here in the Chicago area do). Bill]

## 61. Heathkit Select-antanna

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:14:29 UTC
From: jtg0707@uxa.cso.uiuc.edu
Message-ID: <1993Jan15.081429.5107@gagme.chi.il.us>
Source record: 43949

Hello,
I am looking for another Heath Select-antenna for my AM radio.
The antanna looks like a flattened out cylinder with a knob on it.
You use it by placing the antanna next to the AM radio, and tune the
antanna by tuning the knob until you hear something. The antanna really
works. On a good day I can get stations as far as Houston from central IL,
and
the signal is quite strong.
Does anyone remember such an antanna? I am looking for another one.
I tried Heathkit; they no longer carry the model.
If anyone know of an alternate source for it, please email.
Thanks in advance.
J.T.

## 63. Radio station listing: Eastern Massachusetts

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:35:36 UTC
From: fybush@world.std.com
Message-ID: <1993Jan15.083536.5514@gagme.chi.il.us>
Source record: 43801

Here's my list of Eastern Mass. radio stations, based on personal listening.
I live here; I've worked at a few of these; if any of my lists are
accurate, this better be it! :-)

BOSTON AND NEARBY SUBURBS (within Rt. 128)

590 WEEI Boston sports talk, Celtics, Bruins (Celtics-owned)
680 WRKO Boston talk, CBS, Red Sox (co-w/WBMX,WHDH,WXKS AM FM)
740 WJIB Cambridge easy listening, gospel at night
850 WHDH Boston talk, NBC Radio, Talknet, WOR (co-w/WRKO etc.)
950 WROL Boston religious, Irish on weekends
1030 WBZ Boston all-news 5am-7pm, talk 7pm-5am, ABC, Patriots
1060 WBIV Natick contemporary Christian
[stn serves Boston from outside Rt. 128]
1090 WILD Boston urban, daytime
1150 WMEX Boston oldies, // WMJX-FM, co-w/WCDJ-FM as well
1260 WEZE Boston religious, Salem Bcstg.
1300 WJDA Quincy big bands, local news, daytime
1330 WRCA Waltham leased-time, primarily Haitian Creole
1360 WLYN Lynn mostly Spanish-language, some local pgmg.
1430 WXKS Everett big bands (co-w/WRKO, WHDH, WBMX, WXKS-FM)
1510 WSSH Boston leased-time, Spanish
1550 WNTN Newton local to 10am, Spanish thereafter, daytime
1600 WUNR Brookline leased-time, Spanish, urban late nights

FM

88.1 WMBR Cambridge MIT, diverse
88.9 WERS Boston Emerson Coll., diverse
89.7 WGBH Boston public radio, classical, jazz(tr. on 96.3)
90.3 WZBC Newton Boston Coll., mostly loud rock
90.9 WBUR Boston public radio from BU, NPR news, jazz
91.5 WMLN Milton Curry Coll, rock, mono
91.5 WMFO Medford Tufts U., diverse, freeform
91.5 WZLY Wellesley Wellesley Coll., very low power
91.9 WUMB Boston public radio from UMass Boston, folk, urban
92.9 WBOS Boston ac, co-w/ WSSH-FM
94.5 WZOU Boston CHR
95.3 WHRB Boston Harvard, classical, jazz, rock overnight
96.9 WCDJ Boston light jazz (co- w/WMEX, WMJX)
98.5 WBMX Boston hot AC, co-w/WRKO, WHDH, WXKS AM-FM
99.5 WSSH Lowell soft ac "Wish", just bought by WBOS
[above stn serves Boston from the north]
100.1 WBRS Waltham Brandeis U., diverse, live music
100.7 WZLX Boston classic rock (co- w/WBCN)

101.7 WFNX Lynn alternative rock, owned by Boston Phoenix
102.5 WCRB Waltham classical
103.3 WODS Boston oldies, CBS-owned
104.1 WBCN Boston album rock (co- w/WZLX)
104.9 WRBB Boston Northeastern U., very low power, urban "Spice"
105.7 WVBF Framingham ac "Boston 105"
[above station's transmitter is in Newton MA, next to Rt. 128]
106.7 WMJX Boston ac, "Magic", // WMEX, co- w/WCDJ
107.9 WXKS Medford CHR/urban, "Kiss 108", co-w/WXKS AM,WBMX,WRKO,WHDH

NORTH SHORE

AM

1230 WESX Salem big band (co- w/WJDA Quincy and often // WJDA)
1450 WNBP Newburyport ac
1570 WNSH Beverly dark

FM

88.3 WBMT Boxford Masconomet Reg. High School, rock

## 64. Re: How to Prepare For the Startup of an AM Radio Tower Nearby

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:35:42 UTC
From: john@zygot.ati.com
Message-ID: <1993Jan15.083542.5529@gagme.chi.il.us>
Source record: 43802

rerickso@cwis.unomaha.edu (Ronald D. Erickson) writes:

> The other day I heard on a
> radio program that people who use hand held cellular telephones
> might be getting cancer from that RF radiation.

This is how the lore is propagated. What you heard about was a lawsuit brought by the husband of a woman who died of a brain tumor. Supposedly, this tumor was located right where the antenna for her handheld phone rested during use. Give the man a break; if he is going to lose his wife to cancer, he might as well have lots of NEC's money to spend relieving his grief.

Of course, there is absolutely no scientific evidence to support this man's claim, but you can bet that NEC will be very generous in an out-of-court settlement. And you can also bet that this case will be cited for years to come as "evidence" that cell phones cause cancer.

As Jim Duncan pointed out, if you want to worry about radiation, worry about what UV is doing to your skin. That is far more influential to your health than all this EMF mumbo-jumbo.

## 65. Preparing for Transmitter Startup

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:36:05 UTC
From: 33plato@cs.wmich.edu
Message-ID: <1993Jan15.083605.5570@gagme.chi.il.us>
Source record: 43803

In the last issue someone was talking about normal operation of a tower interfering with poorly designed commercial equipment. my two cents worth, as a liscenced radio amateur IMNSHO most commercial gear is garbage, I worked a field day competition (1 of many) for 24 hours with well designed amatuer equipment under adverse conditions, because of site problems we have to work with antennas 4 feet apart, and near continuous 100watt transmissions. During this time we had little or no RFI, the antennas were resonant dipoles broadside to each other in an X, operating on harmonically related bands (7.125 mhz and 3.75 mhx). No given the inverses square relation of signal strength I refuse to believe anyone near a radio station would operate under much worse conditions, in my experience all RFI is caused by 10% strong fields and 90% bad engineering. Some suggestions, put a 400v capoacitor across your phone line, this shorts out the rf, this alone removed rfi in my very cruddy phones. buy a choke for your tv power cords, or best of all, ask a neighborhood ham, we are usually happy to help

## 66. Interesting news in the Providence - New Bedford ADI

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:36:20 UTC
From: reynhout@cs.uri.edu
Message-ID: <1993Jan15.083620.5601@gagme.chi.il.us>
Source record: 43804

Two things of note:

First, Telemedia Communications is negotiating to buy WPRO AM/FM from Capital Cities. Telemedia already has a substantial interest in the market, and the purchase would fall under the recently-raised ownership limits. The snag right now is that the latest books put the market share (purchase included) at 24.7%. The staff at WPRO is working very hard to make sure that they push that number over 25% for the next one. Job security and all... :-)
It strikes me as strange, though, that CapCities would want to sell their former flagship, especially in the Prov-NB market! They must have something in mind...

Secondly, WBRU has had a major change of facility approved... a displacement of 9km, a drop of about 40m, and a gain of 30kW (!). I spoke to the CE at 'BRU a few years ago, when the app was filed...he was of the opinion that it would *never* come through, but that management had wanted to try.. I'm still amazed at that one. There's just not enough room for that. I think they were shortspaced to begin with.

That's the news from ADI 43.... BTW - does anyone have the exact books for this market?

Andrew

## 67. Buffalo Traffic Reporter Killed in Helicopter Crash

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:40:10 UTC
From: lhpalter@nexus.yorku.ca
Message-ID: <1993Jan15.084010.5694@gagme.chi.il.us>
Source record: 43805

On Monday evening, Jan. 11th, a helicopter, leased by Buffalo radio station WGR-AM 550 (WGR NewsRadio 55) crashed into the Niagara River in the Buffalo suburb of Townawanda, NY. Traffic Reporter Mike Roszman, 48, had just ended an on-air traffic reporter at 5:20 pm., with no indication of any impending trouble. Moments later, air-traffic controllers at Niagara Falls International Airport had received a message from chopper pilot Herman Kuhn, also 48, that he was going to be making an immediate landing due to high winds. At approx. 5:30 p.m. some people reported seeing orange flashes near some power lines straddling the river. Emergency Services personnel from both sides of the border were at the scene quickly, recovering the chopper's black box recorder. The bodies of the two men were not found until mid-afternoon Tuesday, Jan. 12.

Mike Roszman, 48, was a general announcer at WGR for some 22 years, the station's longest-serving employee. The pilot, 48-year-old Herman Kuhn, was an experienced pilot, retired from the United States Air Force.

## 68. Shadow tapes wanted

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:40:21 UTC
From: amo@mvuxd.att.com
Message-ID: <1993Jan15.084021.5719@gagme.chi.il.us>
Source record: 43806

If this is the wrong place to post this, my apologies. I couldn't find another board that seemed suitable.

I am a great fan of The Shadow radio program. I have some of the shows on tape and a couple records. I would like to get more for my collection. Does anyone know places that sell them? If someone else has tapes, I'd also be willing to swap tapes.

Can anyone help?
Arlene Osborne

[Moderator's Note: To whom it may concern, This IS an appropriate place to post anything relating to domestic radio broadcasting, past, present and future. Thanks. Bill]

## 69. Super Radio II as an Antenna

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:40:32 UTC
From: bwb@sirius.triad.com
Message-ID: <1993Jan15.084032.5754@gagme.chi.il.us>
Source record: 43807

I seem to recall someone modifying the GE Super Radio II in such a manner that it becomes a superb amplified ferrite bar antenna (an NRC publication, if memory serves). With ferrite loops costing upwards of $100.00, this seems like it would be a common modification. It would be great if it could be switchable, "look, it's a radio, look it's an antenna!" It would sure beat dragging my 4' loop around. Any comments? Please reply directly, and if I get enough response, I'll summarize the posts. Thanks.

## 70. Starting an FM station

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:40:41 UTC
From: CHRIS@SDG.DRA.COM
Message-ID: <1993Jan15.084041.5780@gagme.chi.il.us>
Source record: 43808

I am seriously considering attempting to start
an FM radio station from scratch.

Has anyone in this newsgroup done this before?

If so I would appreciate any information or advice
about this venture; particularly concerning:

-fcc licensing
-advertising revenue
-costs!!!!

Any informative response would be appreciated.

Chris Yunker

## 71. Re: Starting a radio station

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:44:42 UTC
From: rerickso@cwis.unomaha.edu
Message-ID: <1993Jan15.084442.5869@gagme.chi.il.us>
Source record: 43809

What I have in mind is to purchase a FCC type accepted
transmitter and FM monitor. As I understand it, I can
make the antenna if I am using a translator. Some engineers
claim that FM and TV gain antennas can skip over the
intended area of reception. The best way is to use one
or two radiators depending if the FCC will not allow a
one radiator installation.

I assume that a Radio Shack mixer would do for a console.
The frequency bandwidth is 20 Hz to 20,000 Hz. I do not know
what the THD would be, but I have heard of engineers building
their own consoles from scratch with no problems.

I do not see how it would cost even $5,000 for a decent and
legal installation unless you know something I do not know.
I would consider a reconditioned transmitter instead of a new
one which might not be debugged. An AM station I used to work
for went to a new state-of-the-art transmitter and had more
problems than it ever had with the old reliable 1966 transmitter.
Not all new ideas are better ideas.

As I understand it, commercial FM translators can broadcast 30
second commercials every hour or similar type of messages from my
1980 FCC Rules and Regulations. I know, I should purchase the
latest copy so I am more up to date.

The station I used to work for bought second-hand test equipment
they often had recalibrated from "TUCKERS ELECTRONICS".

In article <1993Jan11.080959.2060@gagme.chi.il.us> joec@fid.Morgan.COM (Joe Collins) writes:
>
>I'll bet WBBR is his latest business venture and he is in competition
>with WBBR against WINS (1010khz) and WCBS (880khz), both all-news radio
>stations in NYC. WBBR was rumored to focus more on business as his niche in
>the crowded NY radio market.

>From listening to WBBR for an afternoon, that seems to be true.
In that case, "competition" with WINS and WCBS is farcical, since
they are different formats. WBBR is a business station which happens
to flash some news at you, from time to time.

I laughed on Friday as they alternately issued and removed a winter
storm watch with each new segment. Get your act together, guys!

## 73. Radio Station Listing: Rhode Island

Newsgroup: rec.radio.broadcasting
Date: 1993-01-15 08:47:48 UTC
From: fybush@world.std.com
Message-ID: <1993Jan15.084748.6045@gagme.chi.il.us>
Source record: 43811

Like my earlier listing of Connecticut stations, this is based on
personal listening (much of it from home this time!) over the last
few years. And before I get started, two corrections from the
CT list: 1300 WAVZ New Haven is "Z-rock" hard rock via satellite...
and I left out 990 WNTY Southington in the Hartford market with an
AC format. Onward...

GREATER PROVIDENCE (or, most of the state)

AM

550 WICE Pawtucket country, "whim"
630 WPRO Providence talk/news (co-owned with WLKW/WWLI)
790 WLKW Providence "Easy 790", easy
920 WHJJ Providence talk/news
990 WALE Providence talk, "Renegade Radio"
1110 WWRX E. Providence CNN Headline news, "1110 CNN"
1220 WRIB Providence religious (co- with WROL Boston)
1290 WRCP Providence Spanish-language
1450 WKRI W. Warwick big bands, Spanish midday
1590 WARV Warwick religious

FM

88.1 new Providence
88.3 WQRI Bristol Roger Williams Coll, progressive
88.7 WJMF Smithfield Smithfield schools
91.3 WDOM Providence Providence Coll, progressive
91.5 WCVY Coventry Coventry schools
92.3 WPRO Providence "92 Pro-FM", CHR
94.1 WHJY Providence "94HJY", AOR (co- with WHJJ)
95.5 WBRU Providence modern rock (operated by Brown U students)
101.5 WWBB Providence "B101" oldies
103.7 WWRX Westerly "WRX" classic rock
[Note: above station's transmitter is outside market, but its studios
and sales offices are in Warwick, and it bills itself as a Providence
station.]
105.1 WWLI Providence "Lite 105" lite rock (co- w/WLKW, WPRO AM FM)
106.3 WWKX Woonsocket "Kix 106", hot CHR (co- w/WARA AM Attleboro MA)

NEWPORT COUNTY

AM

1540 WADK Newport AC, local news

FM

90.7 WJHD Portsmouth Portsmouth schools
100.3 WOTB Middletown light jazz (co- w/WADK)

WOONSOCKET

AM

1240 WOON Woonsocket talk, news
1380 WNRI Woonsocket AC

FM

106.3 WWKX Woonsocket (see note in Providence listings)

SOUTHERN RHODE ISLAND

AM

1180 WJJF Hope Valley country (station serves SE Conn. market)
1230 WERI Westerly AC (co- w/WWRX AM-FM)

FM

90.3 WRIU Kingston U. of RI, diverse
95.9 WVBI Block Island construction permit, not yet on air
99.3 WBLQ Block Island AC, "99Q"
103.7 WWRX Westerly (see note in Providence market)

Note that some stations in Southeastern Massachusetts primarily serve
the Providence market (and 93.3 WSNE Taunton has its studios in RI).
I'll note these when I post my Mass. listings soon.

As always, suggestions and corrections are welcome.

There are sevaral Shadow tapes in the catalog from this source, from which we have bought old radio program tapes for some years now. The tapes are good quality and the service is slow but sure. If you have 4-track reel-to-reel capability, getting tapes in that format is the most economical choice, and he uses good quality reel tapes:

Carl Froelich Jr.
#2 Heritage Farm Dr.
New Freedom, PA 17349

Of course, the programs are also available on cassette.

I suggest that anyone interested in old radio programs write Froelich for a catalog; also mention your specific wants, as he adds things to his list based on demand.

## 76. Refurbished GE Superradio IIs -- Impressions

Newsgroup: rec.radio.broadcasting
Date: 1993-01-17 13:33:58 UTC
From: Will Martin <wmartin@STL-06SIMA.ARMY.MIL>
Message-ID: <1993Jan17.133358.14045@gagme.chi.il.us>
Source record: 43814

There's been some discussion over on rec.radio.shortwave about getting refurbished models of the now-discontinued GE Superradio II direct from Thompson/GE. I recently ordered one and it came yesterday. I already had a Sup II but I got this one as a spare, because the reviews of the new Superradio III uniformly agree that it is poor in comparison. (The only advantage the new model has is AM coverage up to 1700 kHz, but critical areas, like FM weak-signal performance in the educational-FM-band section below 92 MHz, are far inferior.)

Anyway, I thought I'd mention on the list that the refurbished models (at least the one I got) do seem to be well worth their cheap price. The radio definitely feels "looser" than my older Sup II, but some of that may be due to their being manufactured by different sources in the first place. (By "looser", I mean things like the control knobs feel a mite wobbly as you turn them, and the carrying handle flops up and down at a touch. My older model has more-solid-feeling knobs and the handle moves firmly. On the other hand, the tuning knob of this "Made in China" refurbished model turns easier than on my older "Made in Hong Kong" model, which is a plus.)

I didn't do detailed comparisons or testing, but just tried the radio out on both AC and battery power and gained some subjective impressions of how well it worked. To summarize, it seemed to perform fine, especially on the area I was mainly interested in, educational FM stations. AM reception in early evening, casually tuning the band, appeared to be as good as my other Sup II.

The radio arrived packaged in a rather dilapidated plain white box, with the packing material appearing to be once-used plastic bags and foamed-in-place cushioning, not the printed box and shaped styrofoam inserts of a new model. But it did work to keep it from damage in the UPS shipping, so no complaint. If you want to give the thing for a present, that might detract. Instead of an owner's manual there was a reduced-Xerox sheet of the original manual. The only cosmetic defect I noted was that the grill paint was scraped away on a few spots, and seemed to flake away more easily when I touched it there. Again no big deal.

So I'd say go for it if you can get one...

It appears the stock of refurbished GE SuperRadioIIs that can be ordered from Thompson/GE at 800-933-5489 (reference model # 7-2885) varies from day to day or week to week.

The operator I spoke with when I ordered mine said they have a "very few" left in stock. Another netter reported they had "9" when he ordered last week.

Note that we've had pointers to this source before on the net, and
then a notice that the SupIIs were all gone. They must have gotten in a
new batch from the refurbishing depot... If you call and they are all
out, try again in a few days or a week.

I'm sure these will be harder and harder to find as the SupIII replaces
the SupII and fewer and fewer returned SupIIs come in for warranty
replacement or whatever the source is on these. So if you want a SupII,
buy it NOW.
^^^^^^^^^^
Price is still $24.44 plus local sales tax and a flat $5 shipping
charge. Still beats any other source, if there are any!

Regards, Will

## 77. Re: Starting an FM station

Newsgroup: rec.radio.broadcasting
Date: 1993-01-17 13:34:29 UTC
From: john@zygot.ati.com
Message-ID: <1993Jan17.133429.14083@gagme.chi.il.us>
Source record: 43815

CHRIS@SDG.DRA.COM (And here's one for the Cards) writes:

> I am seriously considering attempting to start
> an FM radio station from scratch.

How seriously? Where?

I know I am going to take considerable heat, but let me be the first to dump a half-full reservoir on you.

First consideration: a channel. In every market worth considering in this country, the band is full. This leaves you with small, mostly-worthless markets where few survive and no one makes any real money.

> Has anyone in this newsgroup done this before?

Yes.

> If so I would appreciate any information or advice
> about this venture; particularly concerning:

> -fcc licensing

This is the least of your problems. After you do a hell of a lot more investigating, you can find many who can help you with these technicalities.

> -advertising revenue

You forgot programming. What are you going to attract advertisers with? In what market? To what audience? What is your competition? What is the median income in your proposed market? Can it even support another station? What is the median age in your proposed market?

> -costs!!!!

I have better than twenty-five years of experience in programming, advertising, engineering, and management. I have engineered several stations from scratch and done major upgrades on some others. I have done work in every size market in the country on both coasts and in between. I have been an owner of a major market station. I have worked with and been a part of a number of "alternative" or "community" stations.

Guess what? I would not even dream about starting a new FM station anywhere in this country where one could be fit in. Now that the rules have changed allowing multiple station ownership within a market, it is even less viable to go for a smaller market, since the heavy players

are in the process of buying up the competition and assuring a virtual lock on any region worth discussing.

> Any informative response would be appreciated.

Starting your own radio station sounds very romantic, but unless you have unlimited funds and are just looking for a new experience, please reconsider. You will not only not get rich, you will be lucky not to lose more than several hundred thousands. A radio station is the biggest money pit you can possibly imagine. Here in the Bay Area, most radio stations are LOSING money. And this is an upscale region--one of the richest in the country. But since you cannot get a channel in anything approaching what would be considered a "city", the point is moot.

Broadcasting to a bunch of cactus plants or pine trees will not put money in your pocket. Since you apparently have not even considered much beyond the license and the money, my best advice would be to go to broadcasters, successful and otherwise, and hear what they have to say. I think you have about ten or twenty years to hang out in the industry before you even THINK any more about starting up a station. If, after that time, you are still gung-ho, then a hearty "good luck" to you.

We now return you to your regularly scheduled fantasy.

KIMPLE@vax.cns.muskingum.edu (John D. Kimple) writes:

>Having been away from talk radio from soem time, is this
>the state of affairs in talk radio?

Unfortunately, yes. Even NPR's "Talk of the Nation", which seems to
have some of the most literate guests and callers, is not immune from
these sorts of problems. The apparent inability of callers and hosts
to follow even the simplest syllogism without floundering is appalling,
but it's probably just a reflection of the general illiteracy, innumeracy,
and illogicity (a word I think I just invented) of the general population.

This might explain why my idea of talk radio is "All Things Considered"
or "Whadda'ya Know?", programs that tend to be reasonably free of
ranting and raving. :-)

## 79. Re: Huge Towers near Germantown, MD

Newsgroup: rec.radio.broadcasting
Date: 1993-01-17 13:37:42 UTC
From: rc@cmr.ncsl.nist.gov
Message-ID: <1993Jan17.133742.14232@gagme.chi.il.us>
Source record: 43817

Our Moderator asked for information on the "huge" radio towers being constructed near Germantown, MD. I postulated that they belonged to WTEM (ex-WGMS-AM) which had been trying to get county permission to relocate their transmitting station to that area.

After a second inspection trip (the first was a failure because of fog), I can report that it DOES look as though WTEM is fairly near completion of a transmitting installation out there. Their location is a lot farther from Germantown than I had expected, being only about 2 km from MD Rte 28 on Black Rock Road (near Black Rock Mill). With their four 450-foot towers and strobe aircraft lights they ARE quite visible! The open farmland for a kilometer or three in all directions makes them all-the-more visible. They have built what looks like a large "colonial" brick transmitter house. The STL dishes are nearly at the top of one tower of the box array. They must be 15 miles from Bethesda; I wonder if they'll have adequate signal with their 1 kW night power.

Regards, Bob Carpenter W3OTC

## 80. Z-100 Global Simulcast?

Newsgroup: rec.radio.broadcasting
Date: 1993-01-17 13:38:04 UTC

Message-ID: <1993Jan17.133804.14272@gagme.chi.il.us>
Source record: 43818

On Thursday, January 14, at 8:30am, Z-100 (WHTZ 100.3 FM) in New
York City supposedly "flipped a switch" that "turned on" transmitters in
Japan. Being fairly involved in college radio, I know that it is not as
simple as that, but I am wondering...

Does anyone out there have details on what the deal is?
(How it is being done, why it is being done, etc...)
How is their signal getting to Japan? (My guess would be that
they bounce it off a satellite, and then use transmitters on
the island.)
How much does pulling off something like this cost?

Thanks...

> man's claim,

This claim, perhaps. But just because someone overreacts, doesn't mean it's safe (a variant of "just because you're paranoid doesn't mean they're not out to get you").

Too much of *anything* will kill you, whether it's water (drown) or sugar (smother).

Would someone either attest to or debunk the story of cancers in engineers who worked on the transmitters atop the Empire State building in NYC?

Have there been any formal studies of radio or TV engineers?

There's enough evidence for the ill-effects of living too close to a high tension line that it doesn't take much of an imagination to think that RF radiation can be harmful, too. Reports of police officers contracting cancers at locations where they rested their radar guns are currently in the news. Time will tell if these are merely anecdotes or whether the effects are real.

My gut instinct tells me that RF is not a worry
for most people, but I can think of two ways to o.d.--a powerful source at a moderate distance, or a weaker source at a very close distance.

Well Jim, I kind of agree with some of what you are saying, but
not all. The FCC Office of Science and Technology released Bulliten
65 (OST-65) which statest limites of human exposure to RF
radiation for different frequencies and distances from
the RF source. As a broadcaster we (you Jim and I Rich)
owe it to the public to be fully aware of the limites
of our stations as set fourth in OST-65.

I am worried everytime I use a cellular phone, everytime
I go near an AM array, everytime I turn my color monitor on.
I've got an engineering background and work on stations.
You bet I'm worried as a HAM everytime I key up 2 watts
right in frount of my face. You bet I think twice
when I'm on a roof top with any (ANY!) RF.

If anyone needs a copy of OST-65, let me know. I'm
greatly worried about the long term effects of RF
and will galdly go out of my way to pick up the financial
and time costs to mail to anyone who is interested.

Best regards to all,
Be healthy and look for antennas...

Rich

I _know_ the explanation of the ionosphere is backwards. There is a new, improved version of the FAQ that gets it right. It was co-written by Earl Higgins in St. Louis...who's the only one who has the complete version. He was supposed to have sent it to Ralph Brandi so it could be posted in rec.radio.shortwave (and subsequently on r.r.b.) in January...but the chain of communications got lost somewhere.

So, Earl, if you're out there...ralph@mtunp.att.com is waiting to start the ball rolling on the new FAQ!

Scott

I have a Select-A-Tenna myself. The company that makes the Select-A-Tenna is Intensitronics. They sell direct by mail; I just happened to get another ad from them in the mail a day or so ago. I don't have their address here at work, but I'll send it next week when I'm back in the office. If you want, though, check a copy of Popular Communications for their ad and also an ad from a place called "Walter Crane" (I'm sure about the "Crane" part and pretty sure about the "Walter".) Look at the advertisers' index near the back of PopComm. Crane sells the Select-A-Tenna too; I think the price is the same from both.

It is also listed in the Johnson Smith catalog, if you ever see one of those.

I haven't been receiving Radio World lately, but recall that
the new federal limits affected such activities as climbing
live towers.

With the possible exception of a Soviet OTH site, I haven't heard
or read of any problems with MW RF beyond RF burns and EMC.

Of course if one gets all worked up about RFI, that may be sufficient
to cause cancer or something.

You talk of this circular as if it was a translation from stone tablets deliverd from a glowing mountaintop. The limits (as has everything else been concerning this topic) were derived from theoretical models with a bunch of "safety margins" thrown in for good measure to compensate for the "unknown factors". OST-65 has about as much real scientific basis as does a "quick pick" for lottery numbers.

> I am worried everytime I use a cellular phone, everytime
> I go near an AM array, everytime I turn my color monitor on.
> I've got an engineering background and work on stations.
> You bet I'm worried as a HAM everytime I key up 2 watts
> right in frount of my face. You bet I think twice
> when I'm on a roof top with any (ANY!) RF.

If worry solved anything, this world would be perfect. Are you worried enough to quit using your cellular phone, advocate the cessation of broadcasting, stop using your computer, and give up ham radio? Obviously not, which means that you do not REALLY know that there is any harm. This is my main objection to all of this scare stuff (in the absence of any real scientific evidence): it causes a fundamentally knee-jerk government to over-react, passing laws and regulations that affect people's lives--for nothing.

> If anyone needs a copy of OST-65, let me know. I'm
> greatly worried about the long term effects of RF
> and will galdly go out of my way to pick up the financial
> and time costs to mail to anyone who is interested.

If there really is a problem, why don't you rid your environment of all the RF. You seem to be willing to propagate the scare, but when the chips are down you will not actually inconvenience yourself. Why don't you shut down that ham rig if you feel it is dangerous? It seems just a bit hypocritical to talk about how worried you are and then continue to use it, no? Believe me, if I even suspected for one instant that any device was doing me harm, it would be outta here in a flash.

> Be healthy and look for antennas...

For whatever good that does.

> radiation can be harmful, too.

Just for the record, what is this evidence? There have been some recently debunked studies in the arena, but to my knowledge there is not yet one piece of scientific evidence that actually links ANY ill-effects to the proximity of high tension lines. Causual statistical anomolies prove nothing.

Before I react in any way, I am going to have to see some solid proof, not hysterical whining or "since we don't know for absolute certain that it is safe, it must be dangerous" logic. In the meantime, I will use sunblock at the beach, but will continue to visit Loma Prieta (antenna farm near San Jose) without giving it a second thought. And there is a hell of a lot more radiation (at more dangerous frequencies) to be had there than from a 600 MW cellular phone.

Herrington 800 622 5221 sells the Select-A-Tenna which they call Omnipotent AM Antenna # A102 for $49.95 (ten dollars less than Edmund Scientific.

My question is-

How good is this device, and is there anything better on the market?

Thanks,

Roy

Message-ID: <1993Jan20.064659.17851@gagme.chi.il.us>
Source record: 43832

I see Mike Schuster already posted the Intensitronics address, and others pointed to other sources like Edmund Scientific. I wanted to correct my earlier reference to "Walter" Crane -- I was misremembering. The company is "C. Crane Company" at 558 10th St., Fortuna, CA 95540, and their phone is 800-522-TUNE or 707-725-5940. They advertise a free catalog. (I never bought from them; I've just seen their ads in various places. The ad I'm looking at now is in the Feb '93 issue of American Survival Guide, p. 75.) Their ad lists receivers and antennas.

Intensitronics' list prices for the Select-A-Tenna are $49.95 for the model 541 and $59.95 for the model 541M; the latter model has a jack for attaching an external antenna.

Regards, Will

## 94. The Power of Suggestion (was: How to prepare for the startup of ...)

Newsgroup: rec.radio.broadcasting

Source record: 43830

All of this hoohah about EMF reminds me of something that happened over a decade ago.

The time had come to move KBAY/KEEN's studios from the Pacific Valley Bank building to a purchased stand-alone facility in Campbell. The location, at the edge of a residential neighborhood, required the acquistion of numerous permits from the city of Campbell--a town noted for its disproportionate bureaucracy.

After securing conditional permits, we constructed the STL structure on the roof which consisted of two PR450s aimed at Loma Prieta and one aimed north toward the now-defunct site on Old Oakland Road. It was early on in the studio-building process and we had not yet even purchased the new STL transmitters.

But the moment the STL antennas were up, complaints poured in to the city offices and to KBAY/KEEN. Most dealt with "severe TV interferrence", although there were reports of other electronic malfunctions. Yours truly was summoned before the city planning commission to address these complaints. You can imagine the buzzing in the room when I stated (under oath) that those antennas were connected to absolutely nothing!

Incidently, months later when the STL transmitters were quietly put on the air at the time of the studio switch, there was not one single complaint. We made the switch in the middle of the afternoon and did not mention it in any way on the air, which I am sure helped us a great deal.

There are still a few talk show hosts around who are capable of providing intelligent discussion. One is Gene Burns, erstwhile Libertarian presidential candidate. Burns was with WRKO here for many years...and he's just moved to WOR New York, which syndicates him nationally. He can be heard in the Northeast over WOR (710) from 3 until 5 in the afternoon. In Boston he's tape-delayed on WHDH (850) from 6 to 8 PM...check your local listings.

And at my own place of employment, David Brudnoy holds forth weeknights from 7 PM until midnight. David is also a libertarian, and vocal about it. His show never fears to appeal to people with brains, but at the same time it's accessible as well. David can be heard over WBZ (1030) in most of the Eastern US after dark. Give him a listen if you get a chance.

[Moderator's Note: All this talk about talk-show hosts just reminds me of how much I, and many others miss Bob Lassiter (former WLS PM drive powerhouse). Although he is gone he is not forgotten. Anyone know if he has an e-mail account anywhere? Compuserve maybe?. Bill ]

Scott Fybush -- fybush@world.std.com
If this post were speaking for WBZ/Group W, it wouldn't mention any other stations, now would it?

## 96. Re: Late nite talk show - KMOX

There was a piece in the paper the other day about how in general the
radio stations are firing talk show hosts who are civilized and have
knowledgeable guests, and replacing them with those who are confrontational
rabble rousers. I guess it shows the public would rather watch a fight
than be informed. At least the public who tune in radio talk shows.

Message-ID: <1993Jan20.071308.18251@gagme.chi.il.us>
Source record: 43840

The subject line just about says it all.

As many of you know, I produce and host a monthly segment of *SIGNALS* devoted to the history of radio. This month's is a remembrance of the late Stanley E. Hubbard (KSTP St. Paul), and should air Saturday 1/23 (although propagation problems this week may delay the next show by a week).

For February, I'm planning a segment on the colorful history of AM 1050 in New York, the station that has been known through the years mostly as WHN, with short forays as WMGM and WFAN. I would appreciate hearing from anyone with airchecks of the station...or just from anyone with memories of AM 1050.

Ideas for future segments are also welcome!

*SIGNALS* airs Saturday nights, 11:35PM Eastern (0435 UTC Sunday) over WWCR, 7435kHz SW, and on the Let's Talk Radio network, S3/21 5.8 audio.

From: u94_dbelson@vaxc.stevens-tech.edu
Message-ID: <1993Jan20.071319.18288@gagme.chi.il.us>
Source record: 43841

This is a serious question, so try not to laugh too hard....
Does anyone out there want a used UREI 1681 console? We just replaced our broadcast console, leaving us with the UREI. At this point, it would basically be good to use for spare parts, assuming that anyone else out there was silly enough to buy a UREI. Make me an offer, and I'll see what we can do.

This question is a bit more serious, and in several parts...
Does anyone know if the FCC rules can be found anywhere on the net, or can they only be ordered from the fcc (or found in the local library, etc.)? We want to try broadcasting low-power AM, and are wondering what the legal allowable limits are, without needing a license. For that matter, what would the low-power FM limits be without needing a license? Can we even do such a thing? Right now, we are on carrier current, and would like to get away from it because it severely limits our listening audience.

Thanks in advance for any and all help....

-David Belson

>I live here; I've worked at a few of these; if any of my lists are
>accurate, this better be it! :-)

>BOSTON AND NEARBY SUBURBS (within Rt. 128)
>
>1060 WBIV Natick contemporary Christian

I believe 1060 mostly broadcasts Spanish-language programming.

[stn serves Boston from outside Rt. 128]
>1150 WMEX Boston oldies, // WMJX-FM, co-w/WCDJ-FM as well

They still simulcast soft adult contemprorary sound of #1 adult-rated(25-54)
WMJX-FM. Celtics-owned WEEI(SportsRadio 590),the most miserable lowest-rated
station in the Boston market, shifts/sells Bruins games to WMEX if
there is same night Celtics/Bruins conflict.

>1430 WXKS Everett big bands (co-w/WRKO, WHDH, WBMX, WXKS-FM)

I think they're actually in Medford(off Rt.16). Same building as their
sister disco station WXKS 108FM. Since Pyramid Brdcasting and Atlantic
Ventures merged last fall to form BRG(Boston Radio Group) I wonder if they
might move all 5 stations into 1 building.(WXKS-AM,WXKS-FM are in Medford,
WBMX-FM,WRKO-AM are in the office building next to Fenway Park and WHDH-AM
is downtown)

FM

99.5 WSSH Lowell soft ac "Wish", just bought by WBOS

Actually,they're in Woburn(off Interstate 93) and I had a pleasure of
visiting and using their studios once. The station will be relocating
to Granum's WBOS-FM studios in Brighton as soon as FCC OK's the deal
between Noble(WSSH) and Granum(WBOS). The other part of WSSH(1510-AM)
is up for sale,too and can be had for a cool $2million.

[above stn serves Boston from the north]
>105.7 WVBF Framingham ac "Boston 105"

They're located in the Prudential Tower in Boston.

-Mark

## 102. Finding used broadcast equipment

Source record: 43835

Fellow net-folk
I am searching for sources of second hand broadcast equipment in
the USA. This equipment would be for export to New Zealand for use
in temporary warrant installations in resort areas during the
summer months .
Specifically I seek :
Small modern consoles
Transmitters in the 20 -> 250 watt range, both 540/1620 AM and
88/108 FM.
Outboard gear ie cart machines, limiters, phone interfaces, UHF links
etc.
Any ideas where to start looking ?
cheers
Mike.

## 103. Radio Stations Number 1 Hit results

Source record: 43836

R.r.b. continues to carry messages from people who would like to start an FM station. I know of a perfect oportunity. See the last couple of issues of Radio World. Under "stations for sale", you'll find that the holder of a suburban Class A FM CP is willing to sell all or part. A California, MD, address is listed. There was a fairly recent grant to California, so I suppose that they find they don't have the money to build the station - here's your chance. California is only about 60 miles from Washington, DC, and is near the Pax River Naval Air Test Center. There are only three or four local-signal FM stations in the area - population over 50,000 - maybe 100,000.

Don't blame me if you lose money....

Bob Carpenter, W3OTC

## 105. Pacifica news at WTJU

Newsgroup: rec.radio.broadcasting
Date: 1993-01-20 07:22:27 UTC
From: AMARC@p2.f406.n250.z1.Fidonet.Org
Message-ID: <1993Jan20.072227.18609@gagme.chi.il.us>
Source record: 43839

The following comes from the ACTIV-L list.

/* ---------- "Threat to Pacifica News Broadcast a" ---------- */
Although this message is of immediate concern to the University of Virginia community, please distribute it to the ACTIV-L. The issue of an maintaining an independent source of news is of universal importance.

Yesterday at 4:30 PM, when I tuned in to Pacifica news on WTJU radio at the University of Virginia I found that Pacifica was not being broadcast that day. I immediately called the station and was told that another satellite feed was being picked up that day for technical reasons. I was also told that there had been complaints against Pacifica to the University Administration and that an investigation examining the criteria for choosing Pacifica for daily broadcasts was underway.

I wrote the following letter to the manager of WTJU radio station. I will include it here. Anyone who is within listening range or who has a desire to see independent new sources survive attempts at censorship should also write a letter to the station.

Charlottesville, VA. 22903

January 13, 1993

Charles Choi, Manager
WTJU Radio
711 Newcomb Hall Station
Charlottesville, VA. 22904

Dear Mr. Choi,

I have been a listener of WTJU for twelve years. I enjoy the great variety of programming that you offer.

It has recently come to my attention that there have been questions about the suitability of continuing to air Pacifica news every afternoon at 4:30 PM.

I never miss Pacifica news. It is a part of my daily routine. It offers a refreshing perspective of current events in contrast to the major newspapers, radio and television broadcasts.

One thing that is particularly outstanding about Pacifica is that it doesn't rely on government and other 'official' information sources, but goes to the trouble of obtaining the perspectives of groups that are underrepresented in our society.

To give one example, on October 12th, (known 'officially' as Columbus Day), Pacifica covered a demonstration by Native Americans at the United Nations building in New York, who were celebrating 500 years of resistance after the invasion of their lands. The other radio stations gave perfunctory coverage of the demonstration. It was only through Pacifica's in-depth coverage that the significance of the event could be comprehended.

Pacifica presents investigative, independent journalism in an environment where mass media independence is badly compromised due to corporate ownership. If some listeners are offended by Pacifica's coverage of Israel, perhaps it is constructive for them to hear an alternative to the mainstream perspective.

The issue here is not whether one is pro or anti-Israel. The issue is whether or not we are going to allow independent voices to be silenced on our public airwaves. Please resist any pressure to take Pacifica off the air. Are you truly in favor of democracy? Do you truly believe that we have a full spectrum of political viewpoints available to the average radio listener? The information that Pacifica gives me is crucial to my knowledge of world affairs. How can I exercise my responsibilities as a well-informed citizen without this knowledge?

Don't give in to censorship and intimidation. Keep Pacifica on the air. That is your responsibility.

Yours truly,
Florence Steele

> .. and, much to my surprize the best performance yet!!

In contrast, mine appeared to be in almost-new condition; like you might expect from a store demo. But after I had it for several weeks, I found that the audio output would occasionally act funny & sometimes cut out completely. This was a *very* intermittent problem, & tapping the radio would cure it. To make a long story short, I opened it up and found a cold solder joint in the audio path...a nice easy fix. It makes me wonder if this could have been the original reason the radio was returned, but because it was so intermittent, maybe Thompson never found it.

Performance seems to be right up there; although I don't have a whole fleet of SR-IIs to use as a comparison. Dial accuracy on both bands was right on target; usually within a few KHz on AM and 100 KHz on FM. This radio replaced an 18-year old Radio Shack Patrolman-4 portable which I'd been using in my shack for AM-FM listening. Compared to the Patrolman (which has seen better days), the SR-II is much easier to tune, and has much better audio characteristics. It's really the best of both worlds: a good high-fidelity portable and DX radio in one; an excellent value.

Does anyone know if the service manual for the SR-II is readily available, and how much it costs. Hopefully I'll never need it, but it's one of those things that's nice to have kicking around...and I enjoy studying the technical aspects of my equipment anyway.

>From: Bruce Bacon <bwb@SIRIUS.TRIAD.COM>
>Subject: SRII Dial Hack

Hello Netters,

I've had my SRII for a couple of years now, primarily tuning on the MW side
of the dial. The SRII is a great MW DX machine except for one main drawback-
dial resolution. Last weekend, I made a modification which has made the
resolution much more livable. If you're into taking radios apart, give the
following a try:

CAVEAT: If you haven't had an SRII apart before, be very careful with the
power switch. Take careful note of what it looks like before removing it!
I gave up and installed an NCR receipt printer rocker switch (P/N 006-1050121).
Much better, but a bit of a hack.

Remove the knobs from the front of the chassis (volume, bass, treble, tuning).
Remove the 6 screws from the back of the chassis.
Remove the screw from the battery compartment.

Rock the handle and the chassis should split open (watch out for the power sw).
The speaker wires connect both sides of the chassis, so be careful.

The pointer is a piece of plexiglass with an orange colored stripe in the
middle. You won't be using the orange stripe anymore for frequency ident-
ification, you'll use the left side of the plexiglass!

Find yourself a suitable scribe (I used an exacto knife). The receiver
should still operate (careful with the power switch) even though it's opened
up. I used batteries to reduce the chance of electricution.

Turn the dial shaft and start identifying stations. Using the scribe and the
left side of the plexiglass, make a vertical mark every 50Khz (550Khz, 600Khz,
650Khz, etc). Be careful to tune the *center* of each station! I made a
double vertical line for each 100Khz marker (600Khz, 700Khz, etc..)
I guess you could get fancy and make a mark every 10Khz, but I think the dial
face would get too crowded.

When you've finished with your scribe marks, you can button it back up. I've
found by using the scribe marks in conjunction with the left side of the
plexiglass, parallax is virtually eliminated. Frequency identification is
much easier. The main thing is to take your time and make sure the frequency
you think you are on *is* the frequency you are on!

Source record: 43849

I heard something very interesting on Thursday. I was dx'ing on the AM band, when I heard a station on 1610 kHz. This station was broadcasting a religious program, and when it was over, an announcer with a low voice said something unintelligible.
The station then went to CNN radio news.
I could not hear any call letters, but it was on 1610. I was listening on a Pioneer KS-330AM am stereo radio.

There is a power house station in the West Indies on 1610 that broadcasts religious programming at nights. I have heard it in Chicago when I am away from the TIS transmitters. Bill]

## 109. Station on 530kHz ??

Newsgroup: rec.radio.broadcasting
Date: 1993-01-24 02:08:09 UTC
From: w1gsl@athena.mit.edu
Message-ID: <1993Jan24.020809.4102@gagme.chi.il.us>
Source record: 43750

Recently while doing some late night "BC DXing" with a new hot car radio
I have been hearing a station on 530 kHz. On alternate nights it seems
to be in French or English. The French version never seems to have any
comercials or ID. Then again my French isn't all it might be.

The English versions has an ocasional spot and IDs on the hour as
"chow 740 (??)" where chow is pronounced as a word, and on the quarter
hour as "chow 530".

Both signals seem relativly strong and fade free here in the Eastern
MA area. I have been able to copy it quite easily as I drive home
in the early morning (0200 to 0500 local).

What is going on here? Have the Canidians laid claim to one more channal?
I thought 530 and 1610 were reserved for travlers aid type limit area
broadcasting.

What kind of arangement would allow shifting format and language on alternate
days? Or has propagation been playing some weird trick these last couple
weeks!

From: kludge@grissom.larc.nasa.gov
Message-ID: <1993Jan24.020831.4144@gagme.chi.il.us>
Source record: 43753

In article <1993Jan15.084442.5869@gagme.chi.il.us> rerickso@cwis.unomaha.edu (Ronald D. Erickson) writes:
>What I have in mind is to purchase a FCC type accepted
>transmitter and FM monitor. As I understand it, I can
>make the antenna if I am using a translator. Some engineers
>claim that FM and TV gain antennas can skip over the
>intended area of reception. The best way is to use one
>or two radiators depending if the FCC will not allow a
>one radiator installation.

Yes, but you can't do any local origination over a translator station. The FCC will not allow it, and there is a NJ station which has been in the courts over the issue recently. You'll have to get a 100W or greater license.

At 100W, you can pick up a surplus exciter and homebrew the transmitter with a couple cheap power transistors as the finals. The problem is that you're gonna pay to get the license paperwork through and to get the contours required for the license.

>I assume that a Radio Shack mixer would do for a console.
>The frequency bandwidth is 20 Hz to 20,000 Hz. I do not know
>what the THD would be, but I have heard of engineers building
>their own consoles from scratch with no problems.

Yes, I have built an 8-channel stereo console from scratch. It cost me about $2,000 or so, but it sounds amazingly good. It's usually more expensive to homebrew than to buy commercial equipment, and if you figure in the cost of your labor it gets even worse. (I even did the sheet metal work on the case myself). The Radio Shack mixer is probably okay for temporary work, but it will break down in a couple of weeks. Trust me; I used one on the air while my board was being constructed and it was a big incentive to get the real board finished.

>I do not see how it would cost even $5,000 for a decent and
>legal installation unless you know something I do not know.
>I would consider a reconditioned transmitter instead of a new
>one which might not be debugged. An AM station I used to work
>for went to a new state-of-the-art transmitter and had more
>problems than it ever had with the old reliable 1966 transmitter.
>Not all new ideas are better ideas.

No problem.... the cost of refurbishing that old gear is pretty high, though. I used to maintain a 1956 RCA transmitter up until about a year ago, and the cost for replacement finals was amazingly high. One of our local AM stations is running a 1938 Crosley transmitter, which

sounds amazingly good, but they've put about $30,000 into refurbishing it over the last few years (though admittedly that includes re-nickel plating the cabinet). I strongly recommend the older gear but I wouldn't expect much of a cost saving.

>As I understand it, commercial FM translators can broadcast 30
>second commercials every hour or similar type of messages from my
>1980 FCC Rules and Regulations. I know, I should purchase the
>latest copy so I am more up to date.

Yes, but that's not much local origination. 30 seconds every hour isn't too terribly useful, although admittedly it reduces the demand for translator licenses.

>The station I used to work for bought second-hand test equipment
>they often had recalibrated from "TUCKERS ELECTRONICS".

Tucker is horribly overpriced and don't do all that good a job of calibration.
You can get better prices in the classifieds in Radio world, and frankly the condition probably won't be any worse. Check the local government surplus scene as well.

>anomolies prove nothing.

There is plenty of good evidence linking various ill-effects to living near high tension lines. There is, however, no evidence whatsoever linking those effects to electromagnetic radiation.

After watching the trucks disgorging used PCB-laden transformer oil over the dirt roads along the power lines, in an attempt to keep the dust down, and seeing this go on over the course of twenty years, I would be very wary of living in the neighborhood. I don't think PCBs are half as harmful as some of the claims, but I don't want to plant my vegetable garden in the stuff.

>
>So much for the days of Joey "Try and fill these shoes" Reynolds to Danny >"Move your Fanny" Neaverth. Those were the days when radio was good.
>

Unfortunately, in order to hire Stern, KB had to fire their entire news department (which was only 3 or 4 people), including long time newsman Jim Faggin who worked at KB since the '60's. The situation at KB is a good case study in how to screw up a station (a 50kW no less).

Price Communications overpaid to buy KB and sister station WKSE-FM during the mid '80's. Kiss 98.5 is Buffalo's top 40 outlet with consistently high ratings among the teeny-bopper crowd. KB, a full service adult contemporary with slightly lower ratings a few years back (10th or 11th in the market) could not generate the revenue to pay the mortgage. Being strapped for cash after an acquisition binge, the Price solution was to fire everyone and carry syndicated programming at KB. They tried everything under the sun from music to business and until Stern, CNN most of the day. Now that the station has a totally muddied image and virtually no audience, Price is going to try something new. Hopefully they will try to emulate WLUP's format. If they give it some time to catch on, maybe 1520 on the dial in Buffalo will stop being a waste of bandwidth for the first time in a few years.

[Moderator's Note: KB could do a lot worse than to emulate WLUP-AM, still one of the few stations in the nation that maintains its own self-created format of 'morning personalities all day long' and maked mucho bucks. Bill]

>Libertarian presidential candidate. Burns was with WRKO here...
>
>And at my own place of employment, David Brudnoy holds forth
>weeknights from 7 PM until midnight. David is also a libertarian...

These were the two names that I thought of too, although I find Gene occasionally to be excessively strident, even arrogant, in standing up for his principles.

I don't get to listen to DB much, since my exposure to talk radio is generally limited to work hours (which usually don't go too far beyond 7PM ;-). If I am around and the radio is on, it's usually tuned to HDH anyway. I used to like listening to Bruce Williams, but his tendency to be condescending and impatient with some of the (more naiive) callers gets annoying real quick.

As for Rush, well, I'd put up with his partisanship and self-aggrandizement for the sake of hearing him skewer some sacred cows, but he sounds more and more like a broken record lately - maybe I've just reached my saturation level.

[Moderator Notes: I still miss Bob Lassiter, the great American antidote to Rush, who was fired from WLS last year. I got an address for him and have written a letter inviting him to join the mailing list for the Internet Radio Journal. We'll see if he responds. Bill]

## 117. Changing Freq. Allocations?

Newsgroup: rec.radio.broadcasting
Date: 1993-01-24 02:17:55 UTC
From: brownsh@libra.unm.edu
Message-ID: <1993Jan24.021755.4527@gagme.chi.il.us>
Source record: 43848

I recently visited my old home town of Pueblo, CO, and
noticed that at least three stations in the Pueblo/ Colo.
Spgs. market have been given new frequencies. Does anyone in
Netland know what the story is
behind this move? Just the FCC being obnoxious??

Shad Brown [brownsh@juris.unm.edu]
Who wishes the FCC would be obnoxious in Albuquerque!

## 118. Ownership of Multiple FMs

Newsgroup: rec.radio.broadcasting
Date: 1993-01-24 02:18:06 UTC
From: brownsh@libra.unm.edu
Message-ID: <1993Jan24.021806.4553@gagme.chi.il.us>
Source record: 43754

I'm ashamed to admit it, but I must not
have been keeping upto date on FCC actions lately...

Did the FCC recently modify the local ownership rules to allow a
broadcast group to own two (or more) FM stations per market?

This seems to be a popular passtime here in Albuquerque lately...
the two top "rock" stations in town have announced
they will be merging under a new broadcast group.

Since my broadcasting professors always said this was
illegal, I assume the FCC has loosened the reins?

Frankly, I think it's a bad move
myself... consolidating large numbers of ratings points in
one broadcast group is going to absolutely DESTROY the
Albuquerque ADI. This in a market already glutted with
loser stations and stations dropping off the air like
flies (witness the short lived KNUA-FM, which was on the
air for all of a month.)

Anyhow, I'd appreciate some net-wisdom on the subject. Flame
away if you like, but don't be too nasty :)

[Moderator's Note: Shad, it is not a shameful thing to have been living in a cave for the past couple years. :->, just joshin'. Anyway, sad but true, the Commission has allowed for some time now, the ownership of multiple stations of the same service in a given market. AM and FM are included and like you said, it is a bad move from a listener or 'radio fan' point of view, for surely it will result in a couple of mega-conglomerates controling the scope and direction of radio even more than already exists. This, along with LMA's, mindless, generic satellite fed programming and a general lack of creativity is making 'real' radio pretty much a thing of the past. From a corporate accountant's point of view, however, these things are 'god sends' and good business. The Commission seems to be more for the bean counters these days than the broadcasters. Sad day indeed when the likes of Howard Stern is considered to be 'creative cutting edge broadcasting'. No wonder there is so much interest in old-time broadcasting. Bill

From: BLICK@vm.cc.latech.edu
Message-ID: <1993Jan24.022225.4707@gagme.chi.il.us>
Source record: 43760

A question has been running around in my mind for the last week, and
I thought this might be a good arena in which to seek information.

First, some background. The Fibber McGee and Molly show had two spinoffs,
the Great Gildersleeve and Beulah shows. Likewise, Jack Benny's program
had two spinoffs, with Dennis Day having his own show and Phil Harris
joining with Alice Faye on their show. (One might even suggest a third
spinoff in The Mel Blanc Show, but I don't consider that a spinoff, since
his handyman's character there was a character that did not appear on the
Benny show.)

Now, the question. Does anyone know of any other old-time radio programs
that produced spinoffs such as these? I can't think of any more.

>definite answer? Just curious.
>
>Gene--

Actually, that is not all true, change it to say that Canada has not licensed any *new* Christain stations. To my knowledge there are two, and they are in St. John's, Newfoundland. They have existed since before NFLD joined confederation (1949). They also have call letters that begin with V (VOAR, is one and the other is similar but I don't remember the sign. VOAR - Voice of Anglican Radio). Canadian stations need to be very balanced in their opinions and a Christian station would not offer a balanced station, at least this is what I am lead to believe. Since the NFLD stations existed before they were in Canada they have been allowed to remain. There does exist a multi-faith religous cable channel, but they are funded through various denominations and therefore are balanced. Perhaps no other group of Churches has tried to do this. This is quite strange considering how libreal some of the radio and tv stations are in this country.

Jeff

## 123. Make your own 'Select-Tenna'

Newsgroup: rec.radio.broadcasting
Date: 1993-01-24 02:23:10 UTC
From: caf@omen.UUCP
Message-ID: <1993Jan24.022310.4781@gagme.chi.il.us>
Source record: 43751

By request, here's how you can build your own Miracle Loop for Fun and Profit (or something like that).

For my experiment I used 20-30 feet of insulated wire. I wound the wire around a large sheet of cardboard, resulting in a rectangular loop of 8 turns, 15 inches on a side. I wasn't trying for anything exact; I just used the "inside antenna" hank of wire that came with my 2010, and didn't want to ruin anything.

I had a three-gang variable condenser from who knows where. I used all gangs in parallel to obtain a maximum capacity of 1000 pf or so.

I connected these together with some test leads and viola, a loop that tunes a fair portion of the AM broadcast band.

To use this contraption, place the radio next to the coil and tune the condenser for strongest signal. With a bit of searching, tuning and reorienting I was able to receive fine reception on some stations that were hardly there without the loop.

When building a loop from your own junkbox, the first trick is to find out what frequencies you can tune to. Find a quite spot on the dial. Tune the condenser back and forth listening for a rise or drop in the noise.

Try different spacings between the radio and loop for best results. The size of the loop can be changed, and you can experiment with different winding styles.

## 124. Those silly spanish language taped courses (humor)

Newsgroup: rec.radio.broadcasting
Date: 1993-01-24 02:27:18 UTC
From: Elliott Mitchell <MITCHEEC@ctrvax.Vanderbilt.Edu>
Message-ID: <1993Jan24.022718.4904@gagme.chi.il.us>
Source record: 43762

An old friend of mine is in the marketing department of the Speedy Gonzales School Of the Rapid Language Learning, you've probably heard their ads on network radio.

They've been wildly successful in selling foreign language tapes to people with nothing better to do but there's been a problem.

Their customers are buying the Spanish tapes and then travelling to Spain and Central America only to find out that they never learned Spanish at all. In fact, some of what they've learned to say is exactly the opposite of what they've been told it means.

In order to settle with the FTC, the Speedy Gonzales School Of the Rapid Language Learning had to drop all claims that their products actually teach a foreign language. But the business is so profitable that they can't just quit selling tapes. So they've decided to change their ads slightly so that they make no actual claims but still hold your attention. Sort of like the Taster's Choice ads with that guy and his twin sister, pretending they just met each other.

Here's a script my buddy smuggled out for me, see what you think, it's got the same two voices, the man and the female customerI

[customer] Whoa! It's sure dark in there! Is this where they're teaching Spanish?

[announcer] Sure is. Do you want to learn Spanish, French, German or any other language?

[customer] Whoa! That's what I want!

[announcer] Then come on in here and I'll give you a patented lesson you won't soon forget.

[customer] But I can hardly see, what's wrong?

[announcer] Somebody unscrewed the light.

[customer] Somebody unscrewed the light?

[announcer] Si*. But you can screw it in.

[customer] I can screw it in?

[announcer] Si. Come over here... stand on this chair... that's right.**

[customer] Over here... This chair... That right?

[announcer] Si! See? A loose light. Now just raise your arms up and screw it in.

[customer] Whoa! I never knew learning Spanish could be so much fun! Now it's so bright in here I can hardly see!

[announcer] That's much better. I'll help you down now and teach you a little French.

[customer] Whoa! Whoa! Whoa! What's that?

[announcer] You mean this?

[customer] Eso si, que es?

[announcer] I call it my 'poquito.'

[customer] Whoa! That's what it is!

* A little spanish lingo for you.

>I thought 530 and 1610 were reserved for travlers aid type limited area
>broadcasting.

[...]

I'm surprised this is the first time you've heard this. The Canadians
have used 530 since 1985, when they licensed CJFT in Fort Erie ON
(just across from Buffalo NY). CJFT ran an AC format with 250 watts...
but because there was NO other station on 530 in North America,
the 530 signal carried incredibly well.

A few years ago, CJFT was granted an FM license on 101.1, and in keeping
with CRTC policy, had to give up the AM.

The 530 frequency was taken by CIAO in Brampton ON (just outside Toronto),
which had been running 5kw on 790 for many years, earlier as CKMW
and before that as CHIC.

The "740" you're hearing is really 790, as CIAO still runs parallel on
both frequencies, with a multi-lingual format. Eventually I believe the
CRTC will make them give up 790.

530 is also used in Canada in High Level, Alberta, a license granted
not long after CJFT, and on the air around 1989.

And as you noted, 530 can be heard fairly well as far as eastern Mass.
after sunset. I'd be interested in how far out 530 has been heard
in either its CJFT or CIAO incarnations (or if anyone has logged the
High Level AB 530).

>The English versions has an ocasional spot and IDs on the hour as
>"chow 740 (??)" where chow is pronounced as a word, and on the quarter
>hour as "chow 530".

That's CIAO -- they have ethnice programming, including Italian. Hence
the pronunciation. I'm working without documentation here, but I think
their frequencies are 790 and 530. They're in the process of moving
frlom the former to the latter. City of license i Brampton, Ontario, I
think.

This isn't the first canadian station on 530... Before CIAO was a
station in Fort Erie, Ontario, right across the border from Buffalo.
Someone will remember the call letters. They left 530 when they went
FM. They were heard everywhere; I hear CIAO on occasion here in Eastern
North Carolina.

Fine, but please try to have a bit of an inquiring mind. We can no more do a controlled trial of RF radiation than we can do a controlled trial of
cigarette smoking. Because of the lack of controlled trials in humans, the Tobacco Institute continues to insist that "Causal statistical anomolies prove nothing. (This is *NOT* a flame against the poster!)

kludge@grissom.larc.nasa.gov (Scott Dorsey) writes:

> There is plenty of good evidence linking various ill-effects to living
> near high tension lines. There is, however, no evidence whatsoever linking
> those effects to electromagnetic radiation.

This is, of course, what I had in mind. There is plenty of statistical data linking bad things with living adjacent to power line routes. But in the usual manner of public idiocy, the populace, activists, and the media immediately upon hearing hoofbeats think zebras instead of horses (as Dr. Dean Edell would say). The instrument of doom just HAS to be those mysterious, invisible, magnetic waves that emanate from those wires. (The big insulators really add to the effect, no? Real Dr. Zarkoff stuff.)

Some years ago, there was a gigantic scare that involved mercury in fish. The national media went into a frenzy and people abandoned the consumption of seafood en masse. What actually happened was that a new technique was developed for detecting mercury at ultra-low levels. After everyone was scared to death, it was determined that the mercury had always been there; we just did not know it. I remember that fracus everytime a new scare comes along.

The fact of the matter is that people suffer from whatever toxics, fumes, and other things that infect power line rights-of-way. But to take one of the things present at those locations (EMR) and insist that it must be the cause of all ills is faulty reasoning. And besides, I have sat in front of video monitors day after day for years and have yet to have a single miscarriage!

> I don't think PCBs are half as harmful
> as some of the claims, but I don't want to plant my vegetable garden in
> the stuff.

I agree. I would not consume PCB-laden oil for a beverage, but as any broadcast engineer knows, the government has gone ape-excrement over the stuff. The tiniest amount must be removed by a certified toxics waste disposal company. If you chose to keep any PCB-filled capacitor in service, there must be stickers aplenty to warn people of their presence. If a fireman sees one of these stickers, he will roll up the hose and let your place burn down rather than expose himself to the fumes of this demon.

Extremes such as this make me very skeptical about ANY supposed hazard. Think about it: if you place your body across the 15KV plate supply, you will be fried. No one makes any stink about this or even discusses

it much. But it sure is a fact that no one disputes. REAL dangers are immediately and obviously apparent. The stuff we debate endlessly (EMR, PCBs, the ozone 'hole', global warming, and all the other trendy modern voodoo) mainly disrupts our lives only because of the kneejerk rules laid down by brain-dead politicians.

Actually, KOA Radio in Denver has been doing an actual parody of the commer-
cial, which is suprising considering the fact they're paroding their own
customers:

(Sound of vacuum cleaner in background):

Male: What are you doing?

Female: Vacuuming.

Male: And what does the vacuum do?

Female: Sucks?

Male: And can you spell sucks?

Female: Sure, S-U-C-K-S.

Male: Wow, you're only one letter off from speaking Spanish!

Female: How?

Male: Wow, you can speak American Indian. (don't flame me for the lack of PC)

Female: So.

Male: Wow, Japanese. Hey, what's another word for us?

Female. We.

Male: You're incredible. How many players on a baseball team?

Female: Nine?

Male: Wow. German.

These people get everything they deserve.

Source record: 43772

Hello,

I've been a college dj for 6 years (WRST-FM Oshkosh and WMSE-FM Milwaukee), and a "commercial" dj for one (WNAM-AM Neenah and WUSW-Oshkosh US96).

Could any programmers/talent suggest ways to improve voice quality, articulation, clearness, etc. I had braces when I was younger, and had them taken off a few years ago. Since then, I've noticed a laziness in my speaking, and some sounds do not "come out right." Certain letters give me more trouble than others, especially the "s". It's not a lisp or anything, just a lot more pronounced than it should be, and with mic processing, it really booms through.

So, can anyone suggest ways to clear up speech, ie tapes, books, lessons, etc. I enjoy broadcasting and hate to give it up because of a few little speech problems. Thanks much. Either reply to the net, or me personally.

Mark Bialik
aka Mark Allan
WMSE-Milwaukee 91.7fm

The booklet "Medium Wave Stations logged 15 June 1991 - 14 June 1992 in Finland, Norway & Sweden" says that CKHL High Level, AB had been heard just once in these countries during that time. It was heard by the dx-pedition number 56 in Lemmenjoki, Finnish Lapland. No other NA station was logged on the frequency of 530 kHz.

you get the advice and support you are seeking. Bill]

## 138. Duopoly <was Re: Ownership of Multiple FMs>

Newsgroup: rec.radio.broadcasting
Date: 1993-01-26 22:53:04 UTC
From: fybush@y
Message-ID: <1993Jan26.225304.9088@gagme.chi.il.us>
Source record: 43776

I've been thinking this over at great length lately, as the Boston market gets more and more consumed by duopolies. In the last few months we've seen:

1) The Boston Radio Group: WXKS AM-FM from Pyramid Bcstg, WRKO-WBMX(FM) from Atlantic Ventures merging and purchasing WHDH(AM) in the process.

2) Infinity (WBCN-FM) planning to buy Cook Inlet's WZLX-FM, thus consolidating the town's AOR and classic rock outlets. (This deal still awaits all-but-certain-now FCC approval).

3) Greater Media (WMEX-WMJX(FM)) buying Emmis' WCDJ(FM).

4) Granum (WBOS-FM) buying Noble's WSSH-FM.

Boston is now the most-duopolied city in America. And although I despised the duopoly when it was first made legal, I'm starting to change my mind. Here's my logic:

Each individual radio station still needs more or less the same amount of air talent to operate, no matter who runs it. So far, the total jobs lost to jocks here is exactly one, as WBMX's live overnight is replace with automation. Casualty of the duopoly? Not so...the live overnight had only been introduced a few months ago anyway, and it was just as non-cost-effective for Atlantic Ventures as for the new Boston Radio Group. There may be a second jock slot lost, but that would be if Stern lands somewhere, and THAT has nothing to do with duopoly. In fact, in order to win FCC approval to buy Cook Inlet, Infinity sent a letter to the FCC vowing NOT to run Stern on any of the Cook Inlet stations (WZLX, WUSN Chicago, or WZGC Atlanta).

As for consolidation of staffing, if that has any effect it will not be to the creative/talent types, but to the front-office salespeople and managers. I can't see where the number of sales or management jobs out there will affect the future of radio.

Another thing to remember: The listener doesn't know about a duopoly. They listen to stations, not companies. It's still in the duopoly owner's interest to make EACH of their stations interesting to listen to. And if a group owner wants to promote a WHDH talk show with spots on WRKO, so what? It's not harming the WRKO air product.

Will the duopoly rule force the "little guy" out of broadcast ownership? Let's get real. In the markets where duopolies are

allowed, those with 5 or more stations, the little guy's
been priced out of the market for years. Can you afford to pay
14 million dollars for a low-rated class B FM? Me either.

And in the markets where AM-FM combos still sell for $300K, the
big corporate duopoly owners will never want to buy anyway. If the
little guy had a chance in those markets before duopoly, that
hasn't changed.

I've been discussing the business end of the duopoly rule in e-mail
with Mark Guidotti, who has some points to make of his own as a
former "little guy" station owner...so maybe he can be persuaded
to post those. Mark?

And as for BENEFITS to duopoly...well, here are a few:

1) Programming shifts. Now that BRG owns Boston's two talkers,
WHDH and WRKO, they can more easily move programming from one to
the other. When Gene Burns left WRKO to find fame and fortune
at WOR in NYC, there was no open time slot on WRKO for Gene's new
syndicated show. No problem, though...it moved to an open
slot on WHDH. The same is likely to happen with Larry King.

2) Increased money to spend on talent. If a station owner owns
5 stations in one market and is profitable, that's 5 successful
stations...where there might once have been 2 successful ones
and 3 on the verge of failure. A station that's successful
can afford to spend more to maintain that success.

I'd be interested to hear if anyone in a duopoly market can
cite any legitimate, verifiable negative effect so far from
the duopoly.

Scott Fybush -- fybush@world.std.com. This is not necessarily the opinion of

Group W, which owns no duopolies (yet), or of WBZ, the only station in
Boston's= top 10 that's not part of a duopoly now.

[Moderator's Note: I started to reply to Scott's article here, but it got to
be too long for a Moderator's Note. See my followup article. Bill]

Scott Fybush (fybush@world.std.com) scribbles;
Moderator's unreasonable opinions :->, are enclosed in [brackets];

I've been thinking this over at great length lately, as the Boston market gets more and more consumed by duopolies. In the last few months we've seen:

[station descriptions deleted]

Boston is now the most-duopolied city in America. And although I despised the duopoly when it was first made legal, I'm starting to change my mind. Here's my logic:

Each individual radio station still needs more or less the same amount of air talent to operate, no matter who runs it.

[...]

In fact, in order to win FCC approval to buy Cook Inlet, Infinity sent a letter to the FCC vowing NOT to run Stern on any of the Cook Inlet stations.

[Moderator: Interesting! Although readers know that I have no use for Stern, it is troubling that licenses are granted based upon NOT carrying certain programming.]

As for consolidation of staffing, if that has any effect it will not be to the creative/talent types, but to the front-office salespeople and managers. I can't see where the number of sales or management jobs out there will affect the future of radio.

[...]

Another thing to remember: The listener doesn't know about a duopoly. They listen to stations, not companies. It's still in the duopoly owner's interest to make EACH of their stations interesting to listen to.

I've been discussing the business end of the duopoly rule in e-mail with Mark Guidotti, who has some points to make of his own as a former "little guy" station owner...so maybe he can be persuaded to post those. Mark?

And as for BENEFITS to duopoly...well, here are a few:

[...]

2) Increased money to spend on talent. If a station owner owns 5 stations in one market and is profitable, that's 5 successful stations...where there might once have been 2 successful ones

and 3 on the verge of failure.

[Like I say below, I have no issue with the purchace of stations that are 'in trouble']

I'd be interested to hear if anyone in a duopoly market can
cite any legitimate, verifiable negative effect so far from
the duopoly.

Scott

[Moderator's Note: I cannot site "legitimate, verifiable negative effects" as such, because formats are already so predicatable and generic anyway, and duopoly is still quite new to the marketplace. It just bothers me in a certain illegitimate, non-verifiable way that media is becoming more and more controled by a few large conglomerates. When the FCC made the rules against duopoly and set limits on media holdings, it was to assure a diversity in management styles and, thus, programming. Of course duopoly is a boon to broadcast companies who can now pocket money from several directions at once.

However, once all viable and profitable broadcast properties are pretty much bought up and divided among the few large corporations, it will be too late to change the situation. It is not like a newspaper or grocery store chain which can (in theory at least) be competed against by an upstart offering a better deal. Broadcast properties are a limited commodity and profitable ones in large markets even more limited. The effect of duopoly will be dulled somewhat by the fact that creative and new formats are rare anyway, so the changes will not be as visible to the public who already is confronted by the predictability of pigeon-holed formats.

Bean-counter/programmers and their armies of consultants are pretty unwilling to take format risks anyway. It is much safer to put a 'tried and true' plug-in format of familiar music or tedius talk than to try something new. Basically, duopoly IMHO like a cancer that is not visible until it's damage is already done. That damage will be the concentration of more and more media power in the hands of fewer and fewer people. Just one more nail in the coffin of what was once a great frontier for creative minds. One more win for the bean counters and one more loss for radio's creative side and the listeners
.
I can already hear the voice of John Higdon telling me to get back to the real world and smell the coffee. I know that complaining about this duopoly thing will not change the reality of it. But it still makes me sad to see it happen and in such an uncontrolled fashion. I always thought that multiple-ownership in a market should be limited to buying up stations which are in trouble financially, as sort of a 'life preserver' effect to keep stations from going belly-up. This I would support. But the current duopoly situation is merely a way for the big to get bigger and for listener's choices to get smaller. I felt this way when satellite formats overtook rural radio (Yes, Mark, I know they have their purpose and place) and now I feel a similar way about this duopoly thing. Not so much about the loss of jobs, because Scott is right, the impact there will be minimal (as opposed to

the loss of jobs factor with satellites), I am concerned with the loss of variety and the passing of the time when broadcasting was an art *first*, and a business second. I even miss the days when the two ideals were basically equal. Now-a-days radio is a business first, middle and last and what comes out of our speakers is basically nothing more than what's needed to attract the mice to the trap. Listeners are catagorized, numbered and fed their daily dose of mediocrity. With fewer providers, that situation is only going to get worse.

Let's say Mc Donalds, Burger King, Taco Bell and Jack-In-The-Box bought up all (or most) existing restaraunt licenses in a city and that there was a freeze on any new restaraunt licenses. So those fast-food companies dictated the type, quality and price of food in virtually every restaraundt in town. Let's say you did not like the Mc Donalds run restaraunts. Sure, you could go to the Burger King or Taco Bell chains, but most of the real choice would diminish. Duopoly is. IMHO, quite similar to that scenerio.

So talk all you want about how nice it is for broadcasters and how the listeners don't know any better... I, for one, do not like it.

[Disclaimer: I have the utmost respect for the professionalism of John Higdon, Mark Guidotti and Scott Fybush even though we differ on this (and probably other) issue(s). Bill]

## 140. Stations that carry Pacifica radio

Newsgroup: rec.radio.broadcasting
Date: 1993-01-26 22:54:05 UTC
From: AMARC@p2.f406.n250.z1.Fidonet.Org
Message-ID: <1993Jan26.225405.9167@gagme.chi.il.us>
Source record: 43778
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Some time ago someone asked about where Pacifica programming was
available. I'm not sure if the request was answered, but I came
across the following list on the APC Network recently.

bg

/* Written 12:31 pm Jan 21, 1993 by jad@hopper.ACS.Virginia.EDU in
igc:soc.culture.us */
/* ---------- "List of PACIFICA RADIO Stations Fro" ---------- */
You can hear Pacifica News and National Programming on these
community radio stations from coast to coast:

P = Pacifica Station
A = Affiliate station which carries the news and all other programming
S = Subscriber station which carries Pacifica News Service
and some other Pacifica programming

All stations are FM, unless otherwise noted.

## 141. Re: How to Prepare For the Startup of an AM Radio Tower Nearby

Newsgroup: rec.radio.broadcasting
Date: 1993-01-26 22:57:59 UTC
From: caf@omen.UUCP
Message-ID: <1993Jan26.225759.9286@gagme.chi.il.us>
Source record: 43779

Let's face it, folks. We've been broadcasting in the MW and SW bands since the 20's. If there were insidious health effects from all that RF we'd have something more to show for it than stories about RF burns, falling off towers, musical tooth fillings, and the odd electrocution.

|> of what they've been told it means.
|>
[...]

This isn't really surprising, considering that their first (?) *AD* had
a blatant mistake in it. They actually fixed this one, rerecording
the ad exactly the same except for one subtle change:

"Eso si, que es" from "That's what I want"
to "That's what it is."

--Robert Book
rbook@rice.edu

"Eso no si, que quiero!"

## 143. Re: Those silly spanish language taped courses (humor)

>Their customers are buying the Spanish tapes and then travelling to Spain
>and Central America only to find out that they never learned Spanish at
>all. In fact, some of what they've learned to say is exactly the opposite
>of what they've been told it means.

The careful listener would have been scared off by a change in their
commercial that occurred about a month or two ago. The original ad was:

M: You know what that means in Spanish?
W: S O C K S?
M: It means, 'That's what I want'!
W: Wow, Spanish is easy!

Someone apparently tipped them off, since the line has been changed to:

M: It means, 'That's what it is'!

It's fairly easy to detect that this was dubbed in, but the witty
tie-in at the end of the ad ('If learning a language is what YOU want')
remains.

Of course, having studied a language for ten years (German), I find
the notion that tapes full of such tricks would actually impart much
real fluency laughable.

Regards,
Tony Matt tonym@world.std.com

## 144. Re: Station on 530kHz ??

Newsgroup: rec.radio.broadcasting
Date: 1993-01-26 23:01:32 UTC
From: wurton@netcom.com
Message-ID: <1993Jan26.230132.9466@gagme.chi.il.us>
Source record: 43782

(deleted discussion on Canadian use of 530 AM)

I've heard CJFT/CIAO down here in SC-not well, but you could make out the id. The equipment used was simply a car radio whose buttons defaulted to 530 AM after the battery died and I had to get it jumped plus the Sony 2010 I have indoors here in the computer room.

## 145. Chicago AC starts split-format AC/heavy-metal operation.

Newsgroup: rec.radio.broadcasting
Date: 1993-01-26 23:01:50 UTC
From: rrb@airwaves.chi.il.us
Message-ID: <1993Jan26.230150.9492@gagme.chi.il.us>
Source record: 43783

Chicago's "New Rock/Heavy Metal" fans will be in for a pleasant surprize as west Suburban WYSY (Y-108) begins the Chicago market's first single-owner-dual-format. operation.

The "Hot AC" station was tied for 31st in the fall book and hopes to bolster those numbers as it begins airing hard rock from 7pm to 5:30 am to coincide with the recent demise of the brokered heavy-rock format on WVVX a north suburban class-A. WYSY will continue to air it's current format during the remaining hours.

Two promoters from Jam Productions, Jerry Mickelson and Arny Granat, who had been instrumental in the WVVX show, will be heavily ivnvolved in the new venture, along with Scott Loftus, PD.

The format will feature what WYSY GM calls "guitar-heavy" music (Extreme, Nirvana, Pearl Jam, etc), from 7 to 11PM, after which the mix will get heavier. What is meant by 'heavier' is still unclear.

WYSY will be competing directly with WWBZ (The Blaze) and is hoping to lure listeners away from album rockers such as WLUP-FM and new-music/alternative stations WXRT and WKQX. Managememt assures the market that they remain commited to the AC format through AM and PM drive, but feel that the core audience for that music does not listen to much radio in the nighttime.

WYSY GM, Frank DiMatteo said that they do not plan to become the "B-96" of rock (refering to WBBM-FM, Chicago's only CHR outlet). DiMatteoo says (paraphrased) We plan to dig deeper into albums and to feature local talent. WYSY hopes to become the "lifestyle station" for what is called "Generation-X" listeners, between 18 and 29.

WYSY, which is licenced to Aurora Il (about 35 miles west of Chicago) recently moved it's transmitter from Aurora to Bloomingdale Il (about half that far west, atop WMAQ-AM's tower) which has brought about a much needed increase in signal strength throughout the metropolitan area. WYSY is a class-B at 107.9.

All information in this article was re-written from that found in the Robert Feder column in the Chicago Sun-Times for Tuesday Jan 26, 1993. Chicago area media fans are strongly encouraged to read Mr Feder's column for the best in Chicagoland radio and TV comings and goings. He is in Monday through thursday's paper.

Bill

## 146. Texas radio station list -part 1 of 3-

Newsgroup: rec.radio.broadcasting
Date: 1993-01-26 23:46:46 UTC
From: "Chip (C.D.) Kelley" <chipk@bnr.ca>

Source record: 43784

[Moderator's Note: I received ***SO*** many requests for this file
that I split it into 3 parts of about 30k each so I could post and
mail it easier. In the future, people, could you try to keep postings
at a reasonable size? I believe that 10 -15k is reasonable. If your
opost is long and you feel it MUST be posted, please break it up into
pieces yourself. I cannot guarantee that I will have the time to
split and seperately post/e-mail large articles such as this. Thank
you for your cooperation. Bill]

---

Here's my updated list for Texas. I included the entire state this
time. The list is pretty accura(+<My_k{yV.Hiwte, although I do not
normally travel out to West Texas, so some of those listings
may not be that current. I have been to or near Austin, San antonio,
Dallas, Waco, Temple/Killeen, Bryan/College Station, Abilene, San
Angelo, Wichita Falls, Houston, Beaumont/Pt Arthur,
Lufkin/Nacogdoches, Tyler/Longview, andSherman/Denison within the last
4 months. So listings for those stations in or near those places
should be current.

## 149. DecalcoMania, the CLUB for radio fans

Newsgroup: rec.radio.broadcasting
Date: 1993-01-28 04:11:27 UTC
From: "testnet!decal\\"@pegasus.att.com
Message-ID: <1993Jan28.041127.28270@gagme.chi.il.us>
Source record: 43787

INTRODUCING DECALCOMANIA, "the club for fans of radio"

FREE SAMPLE ISSUE FREE AIRCHECKS LIST
see below

Decalcomania is THE club for radio enthusiasts who collect and trade AM &
FM stations' promotional materials and airchecks, and like to keep track of
what stations are doing in other markets, while keeping members updated on
what's happening in their own market.

The newsletter, issued 10 times annually, has these member write-in columns:

Market Lists - list of the stations, by frequency, call letter, and format,
in a given market, with the potential for an up-to-date and more
in-depth analysis of formats than an annual publication can give
with one,two,or three letter abbreviations
Stix Tipz - tips on which stations have what promotional items available,
including a description of the wording and colors of stickers, to
help you determine if you have this one or not.
Trading Post - what promotional items members have to trade
Aircheck Arcade - members tell about airchecking trips taken, what
stations they recorded and have available for trade, or what
they're looking for on tape
Chatter Box - like the Forums and Musings in other clubs, the general
write-in column where members can introduce themselves, give
radio news, opinions on their local stations, etc
Care and Feeding of a Promotional collection - tips on how to increase
response when writing or visiting stations, how to store, arrange,
display ones materials, etc.
Mailbag - members and non-members can write in with general requests,
mention items for sale [a recent entry was a 50 POUND box of
New York City music surveys for auction], catalogs available, etc.
Musical Time Machine - a sampling of music surveys from the past. As an
example, a list of the top five at 10 different stations this
week, 20 years ago. Sometimes the history of one station's music
surveys is detailed.
Jock Block - the life story of a particular radio air talent.

The now ten year old club also offers several publications, such as
the UnID Guide, aimed at helping you put call letters on that sticker that
just says "Rock 92" that you've had all these years.

In summary, DecalcoMania is a club for the hobbyist who lives and breathes
radio. Unlike most other radio clubs, it is not a DX reporting club, though
most of its members have their roots in DX clubs.

A year's dues are just $11 US, ($12 Canada, $17.50 Europe,$19 elsewhere)
and a trial 6-month membership is available.

If you're ready to join now or if you would like a FREE SAMPLE issue, which
includes more introductory information and a membership application, send
e-mail to

att!pegasus!testnet!decal or testnet%decal\@pegasus.att.com

with your name, mailing address, questions, and other pertinent information.

Also indicate if you would like an 8 page listing of AIRCHECKS for sale or
trade.

This offer is good to anyone ANYWHERE ON THIS EARTH.

---
Not affiliated with AT&T, CBS, or the Columbia School of Broadcasting, lo-
cated just half a mile South of the blinking light. Classes that begin
in February can have you on the air by June. Offer void where prohibited. Your
mileage may vary. Batteries not included. Today's best music without any rap,
hard stuff, or sleepy elevator music. We don't stop the music more than twice
an hour for commercials, but we do stop the music 4 times an hour to tell you
that. All the promotional information, without all the DX. DecalcoMania.

## 150. EBS Mistake in San Antonio

Newsgroup: rec.radio.broadcasting
Date: 1993-01-29 04:53:11 UTC
From: sbooth@lonestar.utsa.edu
Message-ID: <1993Jan29.045311.9765@gagme.chi.il.us>
Source record: 43788

According to one of the local papers, an FM station here accidentally ran an EBS test that said 'This is NOT a test, stay tuned for further information'. No major panic resulted, but the worst part about it was the way the mistake occurred: a trainee in the studio loaded the wrong cart (cartridge tape).

I wonder how the two different carts are marked? At the college radio station a friend of mine works at has in it's cart rack a tape clearly marked: 'EBS NAT. EMERGENCY', so there's no way it could ever be loaded by mistake.

So, what are the chances of this happening again? How often has this happened, and what do the FCC rules have to say about this?

Simon

## 151. Re: Duopoly <was Re: Ownership of Multiple FMs>

> certain illegitimate, non-verifiable way that media is becoming more and more
> controled by a few large conglomerates.

Anyone remember the TV show Max Headroom,
where everything was very tightly controlled and ratings were
everything... measured by the minute? Where commercials had their own
ratings? Remember that? Think we're moving towards that?

## 152. Re: Duopoly <was Re: Ownership of Multiple FMs>

Newsgroup: rec.radio.broadcasting
Date: 1993-01-29 04:53:51 UTC
From: fybush@world.std.com
Message-ID: <1993Jan29.045351.9819@gagme.chi.il.us>
Source record: 43790

In reading my comments again, and in reading the Moderator's comments, I thought of a few more points...

I think Bill is getting the _art_ of radio mixed up with the _ownership_ of radio. I think Bill would likely agree with me that some of the best radio in the history of modern formats (ie post-1955) has taken place at stations like WABC, WLS, and WNBC...all of which were owned by THE largest broadcast conglomerates of their days, ABC and NBC. I agree fully with Bill that the art of good radio is sorely lacking, but I also firmly believe that the ability to hire the people to create good radio depends in large part upon the financial stability and resources of the station owner. That's one reason WABC eventually outgunned WMCA, WINS, and WMGM in the station wars in NYC...ABC could afford the promotions and the contests and the DJs (770 also had that killer signal, to be sure, but that cost money as well...).

I find it odd to be _defending_ huge corporate ownership, but having worked under the alternative, I can say from experience that even the most dedicated, radio-loving, creative person cannot last long under an owner who can't afford to update the facility from 1950s equipment and who can't pay enough to make rent. Especially these days, it takes money to create a competitive product, and that money just doesn't exist outside the big guns of ABC, CBS, Infinity, Group W, et al.

There are of course exceptions, such as the KPFA's and Pacificas of the world, but noncommercial radio has existed as a creature unto itself for many years now, and duopoly shouldn't affect it at all. But in the real world of commercial radio, it takes dollars to create product, and those dollars just aren't coming in enough for the smaller standalone operators out there.

Finally, a point about control. I don't believe that the ownership of a station really influences content on a daily basis. I don't think all of Group W's stations are toeing a single corporate line. Even among the all-newsers, there are a variety of philosophies ranging from the hard-edged sound of WINS and WMAQ all the way to the laid-back West Coast news-talk of KFWB and KFBK. John Higdon has plenty of experience with Infinity, and he's written before about how independent their stations are.

In short, I would maintain that if formats are stagnant right now, the best way to change them is to provide a flow of money for talent into AS MANY stations as possible, and the way to do that is duopoly. Keep an eye on those "second and third" FMs...that, I think, is where we'll start seeing some creativity coming (as well as on

the co-owned AMs.)

Scott Fybush -- fybush@world.std.com

CORRECTION: WBZ is not Boston's only non-duopoly in the top 10. WZOU (Ardman) and WODS (CBS) also placed in the 12+ top 10 in fall 1992.

[Moderator's Note: Once again, my verbose whining has taklen up more space than I like to use in a moderator's note, so I posted a followup. Bill]

## 153. Re: Duopoly <was Re: Ownership of Multiple FMs>

Newsgroup: rec.radio.broadcasting

Source record: 43791

Scott Fybush (fybush@world.std.com) types:
... and the moderator whines in response [enclosed in brackets]:

I think Bill is getting the _art_ of radio mixed up with the _ownership_
of radio. I think Bill would likely agree with me that some of the best
radio in the history of modern formats (ie post-1955) has taken place
at stations like WABC, WLS, and WNBC...all of which were owned by THE
largest broadcast conglomerates of their days, ABC and NBC.

[Bill: See my shocking commentary on top-40, at the end of the article. ]

I agree fully with Bill that the art of good radio is sorely lacking, but I
also firmly believe that the ability to hire the people to create
good radio depends in large part upon the financial stability and
resources of the station owner.

[Bill: Having the financial ability to hire good talent is certainly an
important aspect of a quality station, as is having equipment that can
produce a technically high quality signal. But having the best CD players
and the highest paid consultants/air talent does not mean the station will be
interesting or innovative. In fact, some of the smallest, lowest budget
signals often spawn the most unique programming (ala WADN). ]

That's one reason WABC eventually
outgunned WMCA, WINS, and WMGM in the station wars in NYC...ABC could
afford the promotions and the contests and the DJs (770 also had
that killer signal, to be sure, but that cost money as well...).

[Bill: Yes, and WMAQ had one of the most expensive and flamboyant promotions
anywhere when it was a country format. They regularily gave away $10,000
dollars in the "WMAQ is gonna make me rich" promotion. They failed anyway
because promotions and 'buying listeners' only does so much. It helps in the
short haul, but as the previous thread on the subject of contests suggested,
it IS expensive and it does not really make a station successful. ]

I find it odd to be _defending_ huge corporate ownership, but
having worked under the alternative, I can say from experience that
even the most dedicated, radio-loving, creative person cannot last
long under an owner who can't afford to update the facility from
1950s equipment and who can't pay enough to make rent.
Especially these days, it takes money to create a competitive product, and
that money just doesn't exist outside the big guns of ABC, CBS,
Infinity, Group W, et al.

[Bill: I have no real quarrel with corporations owning and/or operating
stations. I DO have a quarrel with the current trend (law) allowing and
promoting the duopoly mania. Like I said before, I can see exceptions to the

old rule regulating a given owner to one station per service/per market. Like if a certain station is losing money big time, is in danger of going belly-up and no 'new' entity is available to purchase the property at a reasonable price. I would support a very liberal 'exceptions' policy to that rule. But to basically 'open the floodgates' and allow multi ownership of a very limited commodity (broadcast channels) is IMHO a very unsettling reality and certainly opens the door to allegations of anti-trust and other ugly words. The original idea behind anti-duopoly rules was to make sure that no single entity (or limited groups of entities) gained 'undue' control over the public airwaves in any given location. I think that is a very healthy idea. Especially, as I have pointed out all to many times, considering that there are only so many licenses to go around. The wealthiest corp's wind up with all the desireable broadcast properties, then feed satellite programming to the less desireable ones. ]

There are of course exceptions, such as the KPFA's and Pacificas of the world, but noncommercial radio has existed as a creature unto itself for many years now, and duopoly shouldn't affect it at all.

[Bill: Agreed. ]

But in the real world of commercial radio, it takes dollars to create product, and those dollars just aren't coming in enough for the smaller standalone operators out there.

[Bill: But it is not just 'stations in trouble' that are being snapped up, and it is not just 'smaller stand-alones' either, Infinity bought Cook-Inlet's 3 stations. It is bigger fish swollowing smaller fish for the sheer profit of it. I cannot see how this scenerio can do anything but make the already bleak state of radio even bleaker.... sorry. ]

Finally, a point about control. I don't believe that the ownership of a station really influences content on a daily basis. I don't think all of Group W's stations are toeing a single corporate line. Even among the all-newsers, there are a variety of philosophies ranging from the hard-edged sound of WINS and WMAQ all the way to the laid-back West Coast news-talk of KFWB and KFBK. John Higdon has plenty of experience with Infinity, and he's written before about how independent their stations are.

[Bill: I am not saying that corporate ownership 'per-se' is bad, and that corporate stations are un-interesting dogs. What I am saying is that as these corporate owners swollow up two, three or more same-service properties in each market that the stage will be set for some substantial control over what passes for radio. Duopoly is not the grim reaper, it is just the most recent nail in a well nailed coffin. As more corporate money machines come in and throw the bucks around, those 'stand-alone' or smaller operators, who are most likely to try something new, will have a tougher and tougher time as advertizing dollars are more and more funneled to the BIG BUX Broadcasting stations in their market. If the stand-alone hits upon something good, the corporate giant will take 'one' of it's major stations and just blow the little guy away with those big budgets you talk about. The

little guy fails, and then one more station goes on the block. ]

In short, I would maintain that if formats are stagnant right now,
the best way to change them is to provide a flow of money for talent
into AS MANY stations as possible, and the way to do that is duopoly.
Keep an eye on those "second and third" FMs...that, I think, is
where we'll start seeing some creativity coming (as well as on
the co-owned AMs.)

[Bill: A flow of money is important, but a spirit of adventure and risk is
also neccessary. A spirit that corporate America is not known for. ]

Scott Fybush -- fybush@world.std.com

[Below is the original whiny sermon :-> that I had originally put at the end
of Scott's post and a Moderator's Note, and then reconsidered and felt that
because of its length, it should be put here as a follow up. There may be
some duplication with the above (there's a shock), since that is what I was
responding to. Bill ]

[Moderator's Note: Well, <Re: Top-40 radio> I hate to shock you, and the
net, but I do not really feel that the top-40 programming of WABC et al was
the *best* programming in modern ages. For it's day, it was innovative, and
it holds many a fond memory from my youth. However to say that a rigidly
controlled playlist of some 30 - 40 'hits' and a handful past hits in tight
rotation was really the epitome of broadcast excellence, (no Limbaugh pun
intended) is something I cannot agree with. In fact, I would go so far as to
say that the top-40 of WABC, WLS, and such probably did more to set the stage
for the stagnannt nature of today's tightly formated radio experience than
anything else. The wild success of such a format convinced programmers that
the 'public' needs to have their entertainment (music) in neatly parsed
portions carefully crafted into 30-45 minute 'clocks' predictable and
polished. That same philosophy now governs, not only popular music formats,
but 'Newsradio' as well ("You give us 22 minutes, we'll give you the world").
In Chicago we have two 24-hour news stations and they both sound EXACTLY THE
SAME. Corporate programmers would tell you that the 'public' only listens
for 5-20 minutes at a time. Why listen longer?, the stories (or the songs)
just repeat and repeat.. The idea that one can get any real grip on the
world in 22 minutes (minus 'traffic-and-weather-together-every-ten-minutes',
commercials and jingles) is just as absurd as thinking that your local CHR or
rock-40 station is supplying you with any real exposure to the music scene.

I think that a station like WADN is a good example of creative programming
with it's folk music format. I cannot see ABC Cap Cities running the WADN
format on their major market duopolies. WLUP-AM is also a shining example.
While WLUP *is* corporate owned, it is the exception, not the rule, and they
succeded in the face of a lot of nay-sayers in other broadcasting
orginizations. Nay-sayers who now eat many of those words.

Like corporate farming over family farming or corporate restaraunts over
privately owned ones, the coropration is primarily in the 'attract the mice
to the trap' business. It is a lot harder to sell anything risky or new

(sometimes those are one-in-the-same) to a corporate board somewhere than it is to a more localized company. I can understand the fact that the corporation has bucks to spend, and that is an important consideration, but once the limited pie is sufficiently sliced among the big boys, I fear that the corporate mentality that brought us Drive-thru-food, strip malls, disposable cars, and disposable lives, will bring us even more predictable, vanilla, tightly controlled, over processed mass media devoid of any real differentiation between stations. I know that most major market station ARE owned and operated by corporations, I am not suggesting we ban them, I am bemoaning the fact that radio is, at this point, operated by accountants and lawyers, not broadcasters.

For years one of the last vestiges of 'something new' was rural radio, now that is all but gone. Now, the rural towns are swollowed up by satellites and now the cities are being swollowed up by duopolies (I still think the correct term is 'MONO-POLIES'). Like the satirical top-40 jingle says ...

"ALL THE HITS - ALL THE TIME ..... ALL THE SAME!"

Sad, but I feel it is getting truer every day.

You may close your hymn books now....

Bill

Someone posted a request for suggestions as to how to improve voice quality. The following applies only to males. Forget pronounciation...for that listen to the big guys (except Sam Donaldson) and practice how to sound mid-western. As to the tonal quality of your utterances, when I was an announcer at WVTM in Manila, I found that a good strong cigar would irritate the vocal chords enough that they vibrated with greater resonance. I don't know whether it tightened them up, or loosened them up, but I could tell the difference. I sounded like I had three or four of what most guys have only two of. There was a secondary benefit....it kept people out of the announce booth. I can reccommend a Phillipine brand, El Conde de Guell (the count is well). It is available in the US (or at least was, about 15 years ago). They are about 8 or 9 inches long and should last about an hour. Unfortunately, to gain the effect, you must inhale, at least a little bit. It is an awful price to pay, especially if you get hooked.

[Moderator's Note: Great to hear from you again, Stan. Got any more stories for us? Bill]

## 157. How does one get a translator licensed?

Newsgroup: rec.radio.broadcasting
Date: 1993-01-29 04:59:38 UTC
From: Russ Crisp <ecsvax!crisp@uncecs.edu>
Message-ID: <1993Jan29.045938.10063@gagme.chi.il.us>
Source record: 43795

Hello.

I've seen some discussion here about translators, and thought
I'd put out a request for some info from you knowledgable
folks.

Here's the scoop. I'm in a very hilly remote area in western
NC. FM coverage is really poor in the moutains here. You can
go up on a hilltop and receive stations from Charlotte, NC,
Greenville-Spartanburg SC, Knoxville, TN, among others. Come
down off the hills, and you get nothing but static. We do have
a translator for a public station out of Asheville, NC, but
they play classical music. This is not a format that is in
big demand around here..

Now that I've got your hearts bleeding for me, here are my questions:
What is the prescribed process one must follow to put up a licensed
translator? Is it possible to get type acceptance and use homebrew
equipment? How difficult is it to get the paperwork through the
bureaucratic maze of the FCC? How much money should one expect to
invest in getting one on the air. My pockets aren't too deep these
days, so maybe you could answer the last question first. If it's
gonna put me in to poorhouse, I'm not interested..

Thanks!

Scott D Fybush writes:

> I'd be interested to hear if anyone in a duopoly market can
> cite any legitimate, verifiable negative effect so far from
> the duopoly.

Can I give you a raincheck on that? We are about to see in the SF south bay area just exactly what happens in a duopoly situation.

A little background:

KRTY, a class A in Los Gatos was purchased by Gammon from some local Portugese owners. Like so many of the Gammon stations, it was seized by the bank and has been operated in receivership for some time. After a period of "manager of the month" stuff, a real manager was installed. He has managed to make the station haul ass, as it were, in the country market. In fact, it is a significant factor in the demise of KEEN as we know it.

But of course the bank ultimately wanted to rid itself of the property. A one-day bidding war ensued, with the players being the owners of all the other stations in the area since the duopoly rules had just been lifted. The winner was Empire Broadcasting, a locally owned, long-time respected broadcaster. (Actually, I think all the broadcasters in the San Jose area are respected. We are very lucky.)

However, the price was very high--being listed in the trades as 3.1 million dollars. Doing some quick math reveals that expenses are going to have to be cut to the bone for the station to pan out as a good investment. The question is going to be: where will the expenses be cut? Talent? Engineering? Management? As of this writing, the deal has not yet actually closed but should by the end of the January.

Currently the station sounds good technically and has a very slick presentation on the air. It also has ARB numbers and good revenue. Let us come back in six months and see how things are going. This should really be a good test case for duopoly.

> class-B at 107.9.

Does this mean that both stations are broadcassting off the same stick? Do they just pay some sort of rent to WMAQ or are they associated in some way financially?

Just wondering.

Todd

P.S. BTW I think you are doing an excellent job. I don't know too much about the ins and outs of broadcasting, but find a lot of the stuff in this group very interesting.

[Moderator's Note: My understanding is that WYSY-FM has a multi-year lease with WMAQ for the tower space. I don't know the terms but it took some fancy engineering and directionalizing the antenna to avoid interference with O'Hare airport signals. WYSY is 107.9, right next to the aircraft band. Jim McNicolas (who reads this group) works there and maybe he can fill us in. As for doing a good job, thanks for the roses, but as I have stated many times, it is the posters who deserve the credit here, and we are lucky enough to have many great radio minds (and Scott Fybush too :->) on this group. Glad to have you aboard. Bill]

## 160. UK) Capital buy Midlands Radio Group.

Newsgroup: rec.radio.broadcasting
Date: 1993-01-29 05:36:44 UTC
From: 9LORKIN@WINVMJ.VNET.IBM.COM
Message-ID: <1993Jan29.053644.11123@gagme.chi.il.us>
Source record: 43798

It passed almost unnoticed in the media, but in the financial pages yesterday it mentioned that shares in the Midlands Radio Group have been suspended following an accepted bid of ₰1.30p per share by Capital Radio. Another dark day for the radio industry in the UK - This now means that just three groups control 50% of ILR stations in the UK. Southern Radio Holdings own Ocean, Southern, Invicta, Mercury, Mellow, etc (a monopoly on the South and East) while GWR have very expansionist plans in the west, which now include Spire (Salisbury) and 51% of Isle of White Radio, and include most of the West country, as well as aspersions towards Ludlow.
Now we have Capital taking over Midland... Apparently their sale of Rivera Radio in France last month was to fund this move.

Julian Lorkin.

## 161. Re: Duopoly <was multiple ownership of FM>

Newsgroup: rec.radio.broadcasting
Date: 1993-01-29 06:03:11 UTC
From: Shad Brown <brownsh@libra.unm.edu>
Message-ID: <1993Jan29.060311.11745@gagme.chi.il.us>
Source record: 43799

I doubt this is "conclusive" proof of a negative effect of market duopoly, but since I sent the initial question on multi-ownership, I'd like to illustrate with the situation here in Albuquerque.

The first multi-group I learned about purchased a struggling AM/FM operation (KOLT 106 FM purchasing KUCU-FM/KDEF-AM). KUCU was a twisted country/spanish weird format, while KDEF was the only live sports station in town. Not a very promising start.

Shortly thereafter, KDEF gave its walking papers to almost the entire air staff (actually, they chose to leave instead of becoming satellite operators) and defected to another station which has happily reinstated their programs. KDEF sunk to mediocraty with all-satellite programming except for the PD's morning show.

Meanwhile, KUCU was slated to become a new age format, changing its call letters to KNUA-FM and starting on Dec. 24 with 24 hrs of "Stairway to Heaven." From a revenue standpoint, it probably was a good idea (the last new age station, KLSK-FM, switched to classic rock about two years ago after a wildly successful run).

But the guy they hired to run the station jumped to North Carolina after the transmitter "blew up" (according to the laid-off PD) on New Year's Eve. The FCC was never notified and the station ceased to exist. No one knows what will happen to the license at this point.

What does this have to do with multi-ownership? I believe in their efforts to keep THREE distinct stations on the air, the KOLT gang spread their resources too far, thus eliminating one station from the market and killing the listenership of their AM. Not that this is bad for the Albuquerque market, mind you (we have 17 stations on FM alone, fighting for every dollar, not to mention the translators feeding in Santa Fe and Las Vegas, NM stations, and rebroadcasting "because of poor radio reception in albuquerque.")

Now, with KLSK and KZRR-FM/KZSS-AM merging, will we see a similar situation? Unknown. I doubt they'll botch things as badly, but it could happen.

So I would dispute Scott's claim that duopoly will free up more money for air talent. It seems like (in ABQ at least) it's

cutting into DJ dollars and pushing more stations into wimpy satellite operations to keep the profit margins high. IMHO, it's bad for the listeners, but probably good for the market, since it'll force some of the deadwood out of the city.

I think it could be handled better by cutting back on the freq. allocations to Albuquerque and limiting the use of translators, but that's not too likely.

## 162. Boston AM aircheck available

Newsgroup: rec.radio.broadcasting
Date: 1993-01-29 06:03:25 UTC
From: fybush@world.std.com
Message-ID: <1993Jan29.060325.11769@gagme.chi.il.us>
Source record: 43600

I have just completed assembling a 60-minute aircheck of the best of
Boston AM radio. Among the contents:

WBZ Morning News, David Brudnoy talkshow (WBZ), Jerry Williams (WRKO),
Clapprood and Whitley (WHDH), Eddie Andelman (WEEI), WADN's folk,
and WJIB's easy listening.

I'll trade a copy of this tape for airchecks from _your_ market,
or (less preferably) for a few bucks postage/tape cost.

E-mail me at fybush@world.std.com if you're interested.

Scott Fybush -- fybush@world.std.com

## 163. Toronto has FM Country

Newsgroup: rec.radio.broadcasting
Date: 1993-01-29 06:03:33 UTC
From: Timothy R Veatch <veatch@cs.toronto.edu>
Message-ID: <1993Jan29.060333.11802@gagme.chi.il.us>
Source record: 43601

I was bombarded on the TV last night with ads announcing that that there is finally a FM Country station in Toronto. I've been waiting for it ever since I moved here in 1990.

So, what do you think? How does it compare to the AM station (I don't know the call letters)? The FM station is CISS (pronounced like 'kiss', not 'cyst' or sis :) )

I listened to it for about an hour around noon. The usual - Reba's version of 'Think', Garth, Judds, something called 'Nude Country', etc., but there were a couple songs I hadn't heard before (good news! - bad news for the AM station). I didn't think that Wayne and Garth's (joke) 'If I had a million dollars' and Alanah Myles' 'Black Velvet' were country, but I guess it is now.

All and all it sounded pretty 'formula': put the CD player on shuffle, slip in a few prerecorded DJ words, but have someone come by to do the weather every once in a while.

Or maybe it's just me - not used to hearing country in stereo anymore, unless it's a CD.

## 164. New FM in Toronto, Ontario

Newsgroup: rec.radio.broadcasting
Date: 1993-01-29 06:03:48 UTC
From: jeffb@audiolab.UWaterloo.ca
Message-ID: <1993Jan29.060348.11836@gagme.chi.il.us>
Source record: 43602

A news report on CITY-TV (57) in Toronto, ON, Canada stated that a new FM country station went on the air on Tuesday, January 26. The station is the first FM country station in Toronto. The call letters are CISS-FM (They call is KISS-FM) and the frequency is 92.5 MHz.

The frequency was a highly contested one. A group called Milestone Corp. was also in the running for the channel back in 1990. They would have broadcast with a format a "Black" Music. The frequency 99.1 MHz was briefly mentioned as another one which should be available in the near future.

The new station will be competing with CKYC 590 kHz (Toronto's Country 59).

*** CLASSIC HITS 4 MILLION

The first preliminary results from the new RAJAR audience research figures have been announced. The new radio ratings cover both Independent and BBC radio, instead of the previously separate ILR and BBC figures. The research suggests that Independent Local Radio has a lower audience share than previously thought - a 42 percent reach compared with 52 percent for the last JICRAR research for ILR only.

Classic FM did better than expected, with a 9 percent reach - around 4 million people - they had been expecting under 3 million to tune in. Atlantic 252 and Classic FM make up 25 percent of Independent Radio listening. Radio One's reach was down 4 percent to 34 percent. The full report will be out in January.

*** LUXEMBOURG CLOSES

Radio Luxembourg's English service closed down at midnight on December 30th after 59 years of broadcasting. The station ran a two-hour programme covering the history of 'The Great 208' as part of its final night, put together by its longest-serving deejay, Mike Hollis. The final six hours were also broadcast on Luxembourg's previous home, the 1.2 megawatt AM transmitter now used by the company's German oldies station.

*** FLUFF SAYS GOODBYE TO PICK OF THE POPS

Alan Freeman signed off from his Sunday Pick of the Pops show on Radio One for the last time on December 27th. He first presented the programe, then on the BBC Light Service, 32 years ago. The sixty-five year old broadcaster will continue with his Saturday night rock show. The Sunday slot will be taken by The Man Ezeke, the first black deejay on daytimes at Radio One.

*** MORE TALK ON ONE-FM

The BBC are to increase the amount of talk on Radio One and Radio Two. Radio One will carry more news items in the Steve Wright show and there will be more documentaries and social action campaigns.

*** INR FEE REDUCTION CRITICISED

The Radio Authority has been criticised for reducing its licence fees to Classic FM and Virgin Radio. One of the applicants which failed to win an INR licence has complained that had the lower fees been present in the first place, it would have influenced their business plans submitted to the Authority as part of their application - and possibly altered the winner of the licences.

*** WORLD SERVICE CUTS ATTACKED

John Tusa, outgoing Managing Director of the BBC World Service, has criticised the Government's plans to cut the organisation's budget by 5 million pounds a year from 1994. The World Service, which has just celebrated its sixtieth birthday, reaches 120 million people worldwide each week.

*** LOCAL LICENCES

The Radio Authority has advertised the regional licence for the north west of England, covers a population of 4.3 million adults.

A new local licence covering Scarborough and Filey in Yorkshire has been announced.

The licences for Luton and Bedford, currently held by Chiltern Radio, Northampton, held by Northants 96, and Ayr, held by West Sound Radio, have been re-advertised by the Radio Authority.

Four groups have applied for the High Wycombe licence: Beech Radio, South Bucks Broadcasting, South Buckinghamshire Radio and Radio Wye.

Wey Valley Radio has taken to the air in Alton, Hampshire, serving 40,000 people.

*** FINANCIAL NEWS

The Glasgow-based Radio Clyde group saw its profits soar by 30 percent for the last financial year. Profits hit 1.83 million on a 12.99 million pound turnover. Its success was helped by the take-over of Edinburgh's Radio Forth the previous year. Radio Clyde has also pulled out of funding Birmingham's Buzz FM. Since its take-over of the Midlands dance music station, Clyde has managed to reduce the losses there from 90,000 to 50,000 pounds a month. However, it has now decided to write off its losses in the station, opening the way for a new backer or buyer for Buzz.

Chiltern Radio moved into the red last year. For the financial year ending in September it lost 392,000 pounds, compared to a 114,000 pound profit the previous year. This was the first time the company made a

loss since its first station began broadcasting in 1981.

Pre-tax profits at the GWR Group doubled in the last year, up from 339,000 UKP to 721,000 UKP. Turnover for the year ending in September was up by 1 million pounds to 8.64 million. Great West Radio owns stations in Bristol, Bath and Swindon as well as a stake in national broadcaster Classic FM.

EMAP, owners of Liverpool's Radio City and London's Kiss FM, saw their radio profits move up to 300,000 UKP on a turnover of 3.5 million UKP.

Profits at the Metro Radio Group are up 10 percent to 1.9 million pounds on a 15.2 million pound turnover. The company had better than expected local advertising revenue. up 19 percent over the previous year compared with just a 2 percent rise for national revenue.

Capital Radio are eyeing the Midlands Radio Group. The seven-station group are in negotiations for a friendly take-over by Capital. Turnover at Midland was up 3 percent to 10.4 million UKP for the year ending in September. Profits fell by 8,000 UKP to 679,000 UKP.

Southern Radio has moved back into profit in the financial year ending in September. The station made a 774,000 UKP profit compared with a 363,000 loss for the previous year.

Westward Broadcasting Group is looking to acquire West Country Broadcasting, which operates DevonAir in Exeter and Plymouth Sound in Plymouth.

*** BITS

Record producer Pete Waterman is to launch a Save Radio One campaign to counter what he sees as the threat to the way the station currently operates from both BBC management and the Government.

Stewart Francis, Chairman of the Association of Independent Radio Contractors, has suggested that funding of BBC Radio should come out of general taxation, rather than the licence fee. The full response to the Green Paper by the AIRC will be issued in January.

Jazz FM have moved their national advertising sales in-house. The station believes that because it is selling a different product to the generally pop-based ILR stations and it is in London, home of the ad agencies, it would make more sense to handle national sales itself.

South East London's Radio Thamesmead have conducted their own listening survey, giving them 7 percent of the audience in their local area. This is up from 4 percent when they last surveyed in 1991.

A licence for the spare bandwidth on Classic FM's transmitters will be offered to the highest bidder early in 1993. Capital FM and LBC already carry data services piggyback on their FM transmitters.

National Transcommunications, the former IBA Engineering department, has signed an eight-year contract to distribute Virgin Radio to the station's 25 AM transmitters around the UK.

Classic FM has launched a charitable trust to raise money and carry out work to increase the appreciation of classical music in the UK.

Vatican Radio has taken a transponder on the Eutelsat 2 satellite. The station will carry 'cultural' advertising - those for pharmaceuticals or luxury goods will be banned.

## 167. Forwarding available for alt.radio.pirate

Newsgroup: rec.radio.broadcasting
Date: 1993-01-30 03:37:32 UTC
From: wdp@gagme.chi.il.us
Message-ID: <1993Jan30.033732.23313@gagme.chi.il.us>
Source record: 43605

Any Rec.radio.subscribers who would like to read alt.radio.pirate
but do not get alt groups, can sign up for a service that will foreward
the articles in a digest form as they become available.

I am currently sending these articles to one r.r.b poster at his
request, and it would be just as easy to send to several, using
aliases.

If you want to be on the list, send e-mail to me at
wdp@gagme.chi.il.us and include the words 'add.pirate' in the subject
matter.

***NOTE**

I am not supporting posting to alt.radio.pirate via this digest, only
reading. You must make other arrangements if you want to post.
Also, this is being done as a service to a regular reader
of this group who lives overseas and may be discontinued if it becomes
a problem. In addition, I will only send out these digests when it is
convenient and i make no guarentee that they will contain every
article in the group, since my site might expire some before I make
the digest.

All that being said, if you CANNOT recieve this group via Usenet,
write to me and I'll add you to the list.

Seeya.

## 168. New Toronto FM Station Debut!

Newsgroup: rec.radio.broadcasting
Date: 1993-02-01 22:59:40 UTC
From: lhpalter@nexus.yorku.ca
Message-ID: <1993Feb1.225940.7301@gagme.chi.il.us>
Source record: 43606

On Tuesday, January 26th, 1993: Toronto's newest radio station went on the air for the first time. CISS-FM 92.5, playing "Modern Country" and being known as "Kiss-FM" serenaded Toronto listeners with such Country artists as Anne Murray, Billy Ray Cyrus, Mary-Chapin Carpenter, etc. The station, owned by Rawlco Communications, based in Western Canada, is the company's first foray into the largest English-language market in Canada. The CRTC granted Rawlco the licence for the last FM frequency designated in the Toronto area in 1990. (Note: There is a 99.1 channel available, due to an all-news radio station, CKO-FM folding in 1989 - the 99.1 frequency is still available - but the CRTC hasn't yet made a decision on the spot's future). Toronto's television stations are being turated with CISS-FM commercials this week to familiarize the listeners with the station. There is competition for CISS-FM, though. CKYC-AM 590 (Country 59) is into its second year as an AM Country-Music station. The startup surrounding the new station was very "hush-hush". No comments were made by anyone on staff, nor was any comment made about announcing staff, some of whom are well-travelled, and experienced Toronto broadcasters.

Note: CRTC - Canadian Radio-Television & Telecommunications Commission Canada's equivalent of the FCC!)

Clearly, society is rapidly taking on the same "fixation" that was shown
on MH. Polls (ratings) seem to replace reason: WHat the majority of those
polled want, that is how the politicians react.

MH was about 20 minutes ahead of its time, right?

## 172. Re: Duopoly <was: Ownership of multiple FM's>

Newsgroup: rec.radio.broadcasting
Date: 1993-02-01 23:04:19 UTC
From: john@zygot.ati.com
Message-ID: <1993Feb1.230419.7499@gagme.chi.il.us>
Source record: 43610

Realities of radio:

Think of a broadcasting channel allowcation as a piece of real estate. It shares a number of attributes: limited quantity, market pricing, improvement potential, etc.

Now let us say that you own a twenty acre parcel that you bought for about twenty grand, or $1,000 per acre. You use that property for assorted things such as a place to race radio controlled model cars or a makeshift playground. You are very popular with the kids.

Now imagine the pages blowing off the calendar. You find that this "kids playground" is worth about two hundred times what you paid for it since it now sits in the middle of an industrial park. At some point, your kindheartedness and eccentricity will have to give in to economics and you WILL sell it to a developer for about 4 million.

So it is with radio. Broadcast properties are worth money. There are few rich eccentrics around who will buy them or hold them while shoveling money out the door at the same time. This is the reality of duopoly. Those "big corporations" are not trying to deprive anyone of what he wants to hear. No, indeed. In fact, the more people that enjoy what they hear, the better. After all, the bottom line is profit, whether you are the "Really Big Corporation" or a local Ma and Pa owner.

Does this make sense? You are no more likely to hear whale farts and wind chimes from Ma and Pa any more than from the RBC. Both have to make enough money to pay the bills and justify the return on investment for a radio station. This INCLUDES long-time owners, since they have to justify keeping the station vs selling it. If it loses money, what possible reason would there be to NOT sell it to RBC?

The days of the radio pioneers are over. Frankly, most of them have long since sold their channels to Really Big Corporation. And even if someone did not, he is still under the same constraints as if he WAS the Really Big Corporation (having to justify sitting on valuable property).

Granted, some broadcasters do a better job than others, but that is so in any field and not relevant to this discussion. NBI (Nationwide) is one of the biggest laughs in the industry. Its collective idiocy knows no bounds. Infinity and a few others do a respectable job. But radio as we used to know it will never return. No one can afford it. And the easing of duopoly will have precious little effect, one way or the other.

Of course, you can always turn to "educational radio", which with rare exceptions are high school/college sandboxes where kids get to play "rock DJ", or highly funded propaganda outlets for religious or political institutions.

Or you can do what I do most of the time: turn the radio off and listen to CDs.

## 173. Re: Duopoly

Newsgroup: rec.radio.broadcasting
Date: 1993-02-01 23:04:35 UTC
From: guidotti@attain.ICD.Teradyne.COM
Message-ID: <1993Feb1.230435.7522@gagme.chi.il.us>
Source record: 43611

On Jan 26, Scott Fybush writes on the subject of Duopolies...

>I've been thinking this over at great length lately, as the Boston
>market gets more and more consumed by duopolies. In the last few

<text deleted>

>I've been discussing the business end of the duopoly rule in e-mail
>with Mark Guidotti, who has some points to make of his own as a
>former "little guy" station owner...so maybe he can be persuaded
>to post those. Mark?

also on Jan 26, in a reply to Scott Fybush, our moderator Bill Pfeiffer writes:

>Let's say Mc Donalds, Burger King, Taco Bell... bought up all...
>and dictated the type, quality and price of food in virtually every
>restaurant in town... most of the real choice would diminish. Duopoly
>is, IMHO, quite similar to that scenario.

.....
My comments on the matter:

Anyone who has owned a business, whether it be a small market station
any other type of business, learns a brutal truth very early: the business
needs profits. I will always remember that ever so subtle tightening of
the underwear I felt upon signing my first run of payroll checks. It was
a graphic reality check if ever I had one.

My view of dupolies is rather simple. Back before FM matured and
WABC was still king of New York with a 25 share, there were only a
handful of companies in each market. With the maturation of FM and
the addition of Docket 80-90 FM's, the market share per company has
eroded so that no one station owns more than 10% (give or take a few
for the sake of argument). New forms of competition have arisen from
cable tv, which often sells spots cheaper than a local radio station,
direct mail and shoppers. However, the number of available advertising
dollars has not increased at the same rate as the growth in media
outlets. Result? More media but a smaller share for everyone.
To be sure, there's diversity due to the sheer number of outlets, but
most stations are starving. Over 50% of the radio stations in the U.S.
are losing money. That is not a healthy industry scenario no matter how
you look at it.

The common wisdom holds that stations are failing to live up to their
potential as evidenced by the number programming satellite and the
general purveyance of bland formats. But how can you expect a good
product from a company with no money to invest in its product?

It wasn't so in the "good old days." I see the new duopoly rules as an opportunity for oversupplied markets to consolidate and allow stations to return to profitability. The expectation of profits is the fuel that drives you to run your business. What would happen if IBM (salient example at the moment) did not have profits. No profits, no R & D. No R & D, no personal computer. OR, personal computer by a company other than IBM. etc. Profits fuel product development.

I've been a founder of a venture-financed high-tech company as well as a "little guy" station owner. There's no difference in the need for profits. In high-tech, you need to plow much of it into R & D and manufacturing. Your right of survival must be paid for by investment in your product line. Companies like IBM and Intel practice this daily. If you don't invest, there's someone out there with his war chest, full of ideas and drive, just waiting to eat your lunch the moment you stumble. The R & D counterparts in the radio business include programming, marketing and engineering (a great sounding signal is an imperative).

Bill speculates that under duopoly, stations would lose variety and force feed a substandard product to their listeners. (see fast food example) However, under a duopoly scenario, many station owners would experience profits for the first time in years. What to do with profits? The model of human competition suggests that someone is going to use his profits to invest in a more competitive product so he/she can earn even more profits. Once that happens, everyone who wants to play has to ante up to the higher stakes. It happens in industry all the time. If it weren't for Apple Computer, Microsoft Windows (and Microsoft, Inc.) wouldn't be what it is today. So too with radio. As duopolies kick in and station owners recapture market share lost since the 60's heydays, profits will return; and with them, the ability to compete more aggressively. That, in turn, will result in better programming. So I am not concerned at all over fewer companies dominating the format menu. Quite the opposite, in fact. The market will force things to get better. Let's bear in mind that, unlike the fast food example, every market will retain enough competitors to insure against monopolies.

To wit, let's consider the 1960's scenario. WABC in its heyday owned 25% of the market; WPLJ, perhaps 5%. American Broadcasting Companies, Inc. had a combined 30% share in New York. I doubt that 4 of even the biggest stations in a market would add up to 30% no matter how it's sliced. Let's consider San Francisco. There are over 60 signals penetrating the market, perhaps more (I haven't counted recently). If every AM and FM station were duopolied, there would be 15 owners. Ever try to get 15 people in a meeting to agree on one action item? Here in the SF Bay area, there are 3 major newspapers. Counting on the same basis, one could argue that each has the potential to own 33% of the market. How about markets with only one paper? Monopoly? Hardly. There are other media outlets all around. Radio and TV are chief among them. So when considering the market share owned by any one company,

it won't be any more than it was in the heyday of the 1960's. Rather than an aberration, I view it as a return to normalcy.

I view the future under the new duopoly rules with optimism. Duopolies will restore meaningful market shares to radio groups, which in turn will mean profits. Profits and competition will precipitate a higher dollar investment in programming and the "other stuff" of radio. The dull format situation should _improve_ as profits increase.

regards,
mark

## 174. A new element has been discovered (humor)

Newsgroup: rec.radio.broadcasting
Date: 1993-02-01 23:06:05 UTC
From: Roger Chesser <CHESSER@ukcc.uky.edu>
Message-ID: <1993Feb1.230605.7596@gagme.chi.il.us>
Source record: 43612

Dear Radio Friends, I think you may enjoy this little bit of
sarcasm. I didn't write it and don't know the author's name,
but it certainly is creative.
"Better living through chemistry."
-----Roger Chesser, WUKY, Lexington, KY.

==========

SCIENTISTS DISCOVER NEW ELEMENT

The heaviest element known to science was recently discovered by university physicists. The element, tentatively named Administratium, has no protons or electrons and thus has an atomic number of 0. However, it does have one neutron, 15 assistant neutrons, 70 vice assistant neutrons, and 161 assistant vice neutrons. This gives it an atomic mass of 247. These 247 particles are held together in a nucleus by a force that involves the continuous exchange of meson-like particles called morons.

Since it has no electrons, Administratium is inert. However, it can be detected chemically as it impedes every reaction it comes into contact with. According to the discoverers, a minute amount of Administratium added to one reaction caused it to take over four days to complete. Without Administratium, the reaction ordinarily occured in less than one second.

Administratium has a normal half-life of approximately three years, at which time it does not actually decay but instead undergoes a reorganization in which assistant neutrons, vice neutrons, and assistant vice neutrons exchange places. Studies seem to show the atomic number actually increasing after each reorganization.

Research indicates that Administratium occurs naturally in the atmosphere. It tends to concentrate in certain locations such as government agencies, large corporations and universities. It can usually be found in the newest, best-appointed and best-maintained buildings.

Scientists warn that Administratium is know to be toxic, and recommend plenty of fluids and bed rest after even low levels of exposure.

## 178. What Is Rec.Radio.Broadcasting? <newest version, archive info incl.>

Newsgroup: rec.radio.broadcasting
Date: 1993-02-01 23:54:55 UTC
From: rrb@airwaves.chi.il.us
Message-ID: <1993Feb1.235455.8135@gagme.chi.il.us>
Source record: 43616
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Greetings readers of rec.radio.broadcasting and Internet Radio Journal.

Here is a brief synopsis of what rec.radio.broadcasting is about.

Basically, rec.radio.broadcasting (r.r.b) is dedicated to just what
the name implies, radio broadcasting. It differs from
rec.radio.shortwave in that we concentrate more on 'domestic'
broadcasting than on international (i.e shortwave).

By domestic, we mean broadcasts which are intended, primarily,for
reception in the same country/nation in which they originate. R.r.b
is an international newsgroup, though, and the term 'domestic'
should not be taken to imply 'USA' or even North American. Readers
in other nations are encouraged to participate.

********** Appropriate Subject Matter **********

Subjects which are appropriate are many. Basically, if it has to do
with broadcast radio, and not _specifically_ international
shortwave, it is welcome here. Occasionally an article which IS
primarily about shortwave will be posted if the subject seems broad
enough that the readership of r.r.b might be interested, or be able
to assist the poster in some way. We do not encourage articles
pertaining to television, except for the occasional article pertaining to
technical or engineering matters, and/or dealing with the
reception/transmission of the actual signal. Articles regarding
the 'content' or 'production' of television, are usually not posted.

Generally, if a subject 'seems' like it would be of interest to the
broadcasting community (which includes those involved in creating,
transmitting or listening to broadcast radio) will be published.
These subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters and interests.
3) DXing (long distance reception) on the standard broadcast bands.
4) Community broadcasting (including non-commercial or utility stations).
5) Pirate broadcasting (especially non-shortwave, domestic pirates).
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.
9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.

13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

****************************** Moderation ********************************

R.r.b is a _very_ loosely moderated group. Basically, the only articles which don't get through are ...

* Articles which are not on (or reasonably near) the stated charter and scope of the group (domestic radio broadcasting).

* Articles pertaining to 'non-broadcast' radio services, such as cellular, two-way, ham, citzens-band, and such.

* Articles that are too long for submission as-is. If your article is longer than 10k (10,000 bytes), consider splitting it into two parts, or better yet, edit it down to a more reasonable size. Check to see if you can eliminate any quoted text. If you believe that your article is of an especially urgent or inforamative nature, and you also feel that you cannot reduce the size without damaging the content, let me know and I will try to work with you.

* Articles which are merely multiple repetitions of an identical answer which has already been offered several times. Often these will be bundled together into a single article to conserve bandwidth and increase readability.

* Articles which contain 'miles' of quoted and multiple quoted text followed by a few lines or less of original text. Please edit quoted text to a minimum and try to adhere to the *50% rule*, that is 51 (or more) percent of original text to 49 (or less) of quoted text. If the thread is old, (not current) more quoted text is appropriate. Only the worst offenders are omited, usually I will edit quoted text myself, when I have time. If you feel the need to offer one or two sentence replies, consider e-mail. Conversely, if your e-mail reply contains information of potential interest to others in the group, consider posting it AS WELL as mailing it to the original poster. We can all benefit from good information.

* Articles which are unwarrantedly offensive, abusive or contentious for the sake of contention. Personal attacks and ridicule are considered such. Discussion, even argument, of issues and opinions are welcomed and encouraged. Flame-wars and such are not. We have discussions here, not shouting matches.

********** If your article is rejected for publication **********

If your article *is* rejected, you will be notified via e-mail with a form letter explaining why the article was rejected. If you post an article, and DO NOT receive such a reply, AND do not see your article posted within a few

days after sending it, please notify me via e-mail. Include your article, if you can with that letter. Occasionally e-mail and news software gets goofy, and an article gets lost. If you DO resend, be sure to mark your article as a 'repost'. Do not assume that your article was rejected, unless you receive a notification.

********** Internet Radio Journal: **********

R.r.b is also available in a digest form via e-mail. This is called the "Internet Radio Journal". If you, or a friend, does not get Usenet (or does not get rec.* groups) please feel free to subscribe to the Journal by sending mail to the Internet address of - journal@airwaves.chi.il.us -. The Journal is also available for 'bursting'or local distribution within a non-Usenet system. If you run such a system, and it is non-commercial (privately owned boards which are either free or charge a nominal 'cover' fee) you are welcome to receive the Journal for distribution within their system.

I am open to suggestions on how to improve this group. Send them via e-mail to wdp@airwaves.chi.il.us. Feel encouraged to post. The group is only as good as its contributors. I would like to extend a special invitation to the engineering and programming folks among us. I would love to see more technical postings. This is an area where I feel r.r.b could use some more input, but that's just me :-). The group is yours and what you make of it, that it will be.

********** Archives **********

The Internet Radio Journal is currently archived at 'deja-vu.aiss.uiuc.edu' and is available there for anonymous FTP. The digests are arranged in 'issue number' order and can be found in the directory '/misc/rec.radio.b-cast'. All Journals are in compressed form and lder digests are stored in packs of two or three issues each. Newer ones are available seperately. We are open to other sites, perhaps a European one, which would like to offer the digests for FTP from their site. Please contact the moderator, William Pfeiffer, at wdp@airwaves.chi.il.us, if you run or know of such a site.

**********

Thanks to all who have, and continue to, participate.

We now return you to your regularly scheduled newsgroup :-).

## 179. Boston RadioWaves

Newsgroup: rec.radio.broadcasting
Date: 1993-02-05 23:11:50 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993Feb5.231150.15987@gagme.chi.il.us>
Source record: 43617

* Big news in Boston this week is Infinity's official take-over of Cook's Classic Rocker WZLX-FM on GroundHog Day. Apparently,Infinity will change 'ZLX's format to "lighter rock" so that it wouldn't compete with Infinity's 25-year old AOR veteran,WBCN-FM("The Rock of Boston"). 'ZLX softer sound should go up against Granum's WBOS-FM("Soft Rock").

It was also reported that 'ZLX's morning personality,Annalisa, will be finally shown the door by Infinity people as had been rumored for months. Mid-morning man,Jeff Gonzer(this guy is not only a bad-sounding DJ but he also eats on the air),will be placed on "life-support" during Infinity's takeover of 'ZLX because of his on-air insults of WBCN's morning old-man, Charles Laquidara(this man is the sole reason why Howard Stern will never be on the air in Boston and not Jesse Helms :-)

* Larry King remains off the Boston air for now. WRKO-680AM which used to carry his show at night,has very popular and well-established Jerry Williams on from 2-6 and he'll not be moved. The other place for King to land would be WRKO's new sister station WHDH-850AM but according to Monday's report in the Boston Globe,WRKO-WHDH's prorgam director will not put a syndicated show in the afternoon when there is a lot of need for local news,traffic info,and weather. He offered tape-delay but Mutual people killed the idea. According to Tuesday's report in the Boston Herald,the local 3-6pm talk-show on WHDH will be history at the end of this month to accommadate King's move to the afternoon or to make room for a 3-hour all-news block(this would be risky since WBZ-1030AM is the all-news authority in this town and they have the best news staff by far than WRKO-WHDH combo). Funny thing is that the Globe listed WRKO carrying King's show in its Tuesday TV/Radio listings with Mickey Mantle as the guest at 3pm. I'll tune in just to check it out...

* Boston might finally get a country station(there has been no country 24-hr format since WBOS-FM switched to AOR/Soft Rock about 4 years ago) very soon. Greater Media which owns #1 rated adult station WMJX-FM will take over WCDJ-FM(Currently playing "Smooth Jazz") in early March. The possible formate change was reported in the Globe last Friday. Considering the source,I think the country music invasion is unlikely into the Boston market.

-Mark

## 180. Polls (was: Duopoly )

Newsgroup: rec.radio.broadcasting
Date: 1993-02-05 23:12:14 UTC
From: seb@draper.com
Message-ID: <1993Feb5.231214.16009@gagme.chi.il.us>
Source record: 43618

Barry Mishkind <barry@jab.tucson.az.us> e-writes:

>Clearly, society is rapidly taking on the same "fixation" that was shown
>on [Max Headroom]. Polls (ratings) seem to replace reason: WHat the
majority of those
>polled want, that is how the politicians react.

Even our vaunted public radio stations are not immune. "Listener surveys" to track what sort of programming attracts the most people (read pledgers) are commonplace. What - preserving the culture? Providing a noncommercial alternative? But - how can PBS survive if it doesn't give its audience what it wants, right?

At least one person I spoke to seemed to suggest that Joe Frank might still be making "Work in Progress" if public radio stations weren't so strapped for funds. So I guess it is inevitable that they'll go for the big draws for their respective audience, just like everyone else.

And programs like JFWIP will continue to be relegated to the graveyard shift where they can't have a negative impact on the stations' pledge drives. One good thing - JF has never been interrupted for a fundraiser, at least not here on my side of the country!

I'm not really complaining. I think our 2 NPR stations here in the Boston area have carved out complementary programming directions, and most of what they have is goot to excellent. But the "excellent" is fewer and farther between. I still miss "Heat" with John Hockenberry...

## 181. Anyone heard of 'sperdvac' ???

Newsgroup: rec.radio.broadcasting
Date: 1993-02-05 23:12:49 UTC
From: gtephx!blackj@ihlpa.att.com
Message-ID: <1993Feb5.231249.16044@gagme.chi.il.us>
Source record: 43619

This is for a friend who does not have net access.

He was reading a book ( I do not have the title, sorry)
on old time radio broadcasting and which mentioned a
'database' called sperdvac but did not provide further
information on what it was, how to access it.

If anyone could email me information, I can pass it along.

You should use email as our news feed is not very reliable
lately for all the news.

My path is :
gtephx!blackj@enuucp.eas.asu.edu

Thanks to all for this strange request.

73,
Jim Black

```
::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::
:: EURONEWS - February 4th, 1993 ::
:: Edited by Risto Kotalampi, rko@cs.tut.fi ::
::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::
```

EDITORIAL NOTE: Since January 1st, 1993, Spain, Portugal, Andorra, Azores and Gibraltar (ie. "Iberia") aren't covered in EuroNews. News from those countries are edited nowadays by Mr. Jari Vanhatalo from Oulu.

NEW COUNTRIES: At midnight on December 31, 1992, the state of Czechoslovakia ceased to exist after 74 years. The two new states are Czech Republic (Czechia/Cesko) and Slovak Republic (Slovakia/Slovensko). Population (approx.) is 10.6 millions in Czechia and 5.3 millions in Slovakia. Area (approx.) of Czechia is 79000 sq. km and Slovakia 49000 sq. km. (Hans Wolf Koehler in InterNet)

ALBANIA: 657 Rrogozhina normally 648 kHz has been heard on this frequency. (EBU via BE via ARC)

1089 is now used for local programs. R Gjirokastir gave ID at 1305 with the following frequencies in use: 1260, 1089, 909, 864, 693 and 1458 and at 1600 "Kanalit dyt experimental". (Horst Rauch via BE via ARC)

BELGIUM: There are two local stations of BRT on AM: BRT Brabant Regional on 540 kHz and R Omroep West-Vlaanderen on 1188 kHz. Brabant regional has local programs at 06.00-07.00, 12.00-13.00 and 17.00-18.00 Belgium's time. Other times national program. V/s for Brabant Regional is Director Guido Cassiman. (JHY)

BOSNIA-HERCEGOVINA: The radio station of the Bosnian Serbs, Studio S, has been heard on 1395 kHz. It makes no mention of that frequency, but announces instead 1242 kHz and a number of FM frequencies. (BBCMS via SCDX)

Radio Bosne i Hercegovine address: V Putnika, 71000 Sarajevo. The station have been on 6220 kHz. (I.Stekl in InterNet)

BULGARIA: Financial difficulties have delayed the 2x500 kW project Kalyakra Cape (1125 kHz). (Kovatchev via BE via ARC)

Addresses and frequencies of local stations: R Blagoevgrad (747), 56 blv. A.Velitchkov, 2700 Blagoevgrad. R Plovdiv (648), 2, kn.Dondukov-Korsakov Street, 4000 Plovdiv. R Shoumen (963), 7, D.Voynikov Street, 9700 Shoumen. R Sofia (774), 4, blv. Dragan

Tzankov, Capital Programmes Section, 1040 Sofia. R Stara Zagora (873), 75, N.Nikolov Street, 6000 Stara Zagora. R Varna (774), 22, blv. Primorski, 9000 Varna. (MPO)

BYELORUSSIA: Die Antwort via R Minsk can be heard every Sunday at 2030-2100 on 6010, 7210, 7255, 7420 and 9710 kHz. Address: Die Antwort, Postfach 767, CH-1701 Freiburg, Switzerland. (A.Silickas via Communication via DIS)

CROATIA: Errata: In the last bulletin, I mentioned that ECR was moved to 6220 due to the interference of Hrvatski R on 6230 kHz. Of course, ECR moved from 6210 kHz, not from 6230 kHz. Sorry! Thanks to (VJR).

CZECHIA: RFE is now also on 1485 kHz //1287 kHz. (BDXC via ARC)

The new Radio Prague has taken over the previous Radio Czechoslovakia schedule. The only change is that all previous broadcasts in Czech and Slovak are now only in Czech. There are also new broadcasts in Slovak, at 1030 and 1430, on 5930 kHz. (BBCMS via SCDX)

ESTONIA: The medium wave transmitter in Tartu on 612 kHz which previously relayed Mayak programs from Moscow, is now carrying Estonian Radio's Fourth Program, in Russian. This includes local programs, as well as relays of Radio Liberty and the BBC. The transmitter in Tallinn on 1512 kHz, which previously carried Estonian Radio's Fourth Program in Russian, now carries the First Program, in Estonian. (BBCMS via SCDX)

FRANCE: Radio France International is to broadcast programs in Turkish, Cambodian, and Laotian to Paris on medium wave 738 kHz, Sundays 1000-1100. (AFP via SCDX)

GERMANY: SFB started to use 1449 kHz transmitter in Kopenicke (250 kW) on November 4th, 1992. (BE via ARC)

801 and 520 kHz are now used by B5 Aktuell. Between 1800 and 2120 UTC 801 kHz is used for foreign language programs. (BE via ARC)

Frequencies and transmitter sites of DLF: 153 Donebach, 207 Aholming, 549 Nordkirchen and Thurnau, 756 Braunschweig and Ravensburg, 810 Berlin, 1269 Neumunster, 1359 Berlin, 1539 Mainflingen and 1575 Burg. (SWN via ARC)

ICELAND: Latest RUV-schedule is as follows: to Scandinavia, United Kingdom and Europe at 1215-1300 on 13835 and 15770 kHz; and at 1855-1930 on 7870 and 11402 kHz. To North America at 1410-1440 on 13855 and 15770 kHz and at 1935-2010 on 13855 and 15770 kHz, and at 2300-2335 on 9275 and 11402 kHz. (Jari Perkiomaki)

Errata: in the last bulletin, dated November 18th, the frequency was missing from NBS Keflavik. It should be 1530 kHz. Thanks to (OSY).

IRELAND: Radio Fax closed down on September 10 according to a QSL-letter asking support letters to be send to UK government. (JHY)

ITALY: 1584 "Musica Romagnola" is a new private station near Bologna. (Horst Rauch via BE via ARC)

Radio Europe, Piotello is testing on weekends 13-17 on 25900 kHz (USB). The address is Via Davanzani 8, I-20158 Milano. (Play-DX)

Erre Ci 107 (ex-R Campogalliano), Modena is heard on 1405 kHz. (Play-DX)

KALININGRAD: A German religious program "Lutheran Hour" is now using Russian facilities in Kaliningrad (1386) and St.Petersburg at 1945-2000 (Sundays only?). (RIAS via SWN via ARC)

LATVIA: Riga 945 150kW is now used by VOA Europe 0400-1545. (BE via ARC)

The Latvian Radio and Television Council has granted transmission frequencies to 9 commercial broadcasting stations. Two of them, Radio SPH and Radio 2 (which relays VOA Europe), will be audible in the entire country. Vards, Un Co, Radio 2A, and one other service will be received only in Riga. There are also three regional stations: Jurmalas Radio, Jelgavas Profils M, and Balvu Merkurijs. (Latvijas R via BBCMS via SCDX)

RFE in Latvian at 1600-1700 on 945, 1071 and 1539 kHz. (BDXC via ARC)

LITHUANIA: 684 Swedish Telecom has withdrawn their OK for using 981 kHz. Therefore Baltic Radio International has changed their frequency. They will start broadcasting on spring 1993. Transmitter site is north of Palanga just at the border of Latvia. Address: BRI, 107 Woodland Drive, Anlaby HU10 7HP, Humberside, England. Fax: +44 482 65 82 27. (BT via OA and BE via ARC)

1458 Radiocentras is now using 12 kW according to the latest reports. (WRTH via BE via ARC)

The transmitter in Vilnius on 612 kHz, which formerly relayed the Mayak program from Moscow, is now carrying Lithuanian Radio's First Program. This transmitter has also been observed carrying Radio Vilnius in English at 2000. Mayak is now heard on 1557 kHz. Two other First Program transmitters, in Klaipeda and Viesintos, have switched from 1557 to 612 kHz, to create a new synchronized network. (BBCMS via SCDX)

Radio Vilnius has added a new broadcast in English at 2000, apparently only on medium wave 666 and 1557 kHz. The broadcast at 2230 continues on 666, 1557, 9675, and 9710 kHz, and the broadcast at 0000 on 7150, 17605, and 17690 kHz. (R Vilnius via BBCMS via SCDX)

LUXEMBURG: Radio Luxembourg's English service closed down at midnight on December 30th after 59 years of broadcasting. The station ran a two-hour programme covering the history of 'The Great 208' as part of its final night, put together by its longest-serving deejay, Mike Hollis. The final six hours were also broadcast on Luxembourg's previous home, the 1.2 megawatt AM transmitter now used by the

company's German oldies station. (AMFM)

Country Nites 1440, with close ties to the former Irish station R Nova, plans to hire airtime on the RTL transmitter during the European evenings and nights. As the name suggest, County & Western music programs will be aired, presented by English language DJs. (SWN via ARC)

MOLDOVA: R Pridnestrovye broadcasts daily on 999 and 1467 kHz. Pro-Russian programs are aired at 1900 in Russian, 2000 in Romanian and 2100 in Ukrainian. On 999 kHz, the Moldovans are deliberately jamming the broadcasts. Address: 25 Oktyabrya 1-134, Tiraspol 278000. (A.Silickas via Communication via DIS)

NORWAY: The Democratic Voice of Burma, which broadcasts from Oslo using Norwegian transmitters, announces in English at sign-on that it is broadcasting between 1430 and 1555 on 15140 kHz. (BBCMS via SCDX)

POLAND: 531 New polish transmitter with program IV. Location Gabin (Lodz) or Raszyn (Warzaw). (BE via ARC)

The new transmitter of Polish Radio's First Program was formally started on December 16th at Raszyn. It has been testing since October 26th, on 225 kHz. (BBCMS via SCDX)

RFE in Polish at 05-07 and 16-23 on 738, 819, 1080, 1206 and 1305 kHz. (BDXC via ARC)

ROMANIA: The external service of R Moldova was conducting tests on SW, presumably via R Romania International transmitters on January 6 & 7. Schedule was: Wed 1900-1925 on 9620 to France, 1935-2000 on 9620 to Spain, 0130-0155 on 9755 to Latin America and 0205-0230 to U.S.A. On Thursday 1300-1325 on 15390 to France and 1335-1400 on 15285 to Spain. (MN and Mick Ogrizek via Australian DX News)

RUSSIA: 1188 DW St.Petersburg is new // 702 Moscow. (JJK), (Osipov)

1260 R SNC is silent, not heard since September 27th with own programs. Radio Golos Nadezhy can be heard in the mornings 0430-0515+, and BBC WS during the day. (See next item!) (JJK)

A 24 hour relay of the BBC World Service has begun in Moscow on 1260 kHz. (BBCMS via SCDX)

Because of material difficulties, Radio Pamyat has reduced its schedule. It is now on the air once a day, 1430-1600 on 7230 kHz. (SCDX)

7230 R Kompaniya Ostankino, Moscow heard here on November 28th at 1255-1430 when QRMed by R St.Pamyat. Has U.S.A. Top 20 on Saturdays at 1330. (JJK)

Radio Ala has moved from 3995 kHz to 5900 kHz, where it is scheduled to broadcast 24 hours a day. (Voice of Russia via BBCMS via SCDX)

1395 R Titan Kompani, Ufa heard here on December 5th. The station announces the address: Ul. Sovietskaya 14, kabinet 9, 450008 Ufa. See also the next item! (JJK)

R Titan, Ufa, Bashkortostan is a new station of the Radio Titan Company formed by Body-Building Association of the Russian Federation, according to BBC Monitoring Service. The organization claims a longstanding, friendly association with the VOA, hence relays VOA programs at certain times. Programs from Radio Sweden have also been aired. R Titan broadcasts in Russian and is heard 0800-0900 daily, as well as 0900-1000 on Saturdays. (BBCMS via Communication via DIS)

1539 R Delovaya Volna, Moscow reactivated with a high power transmitter. (JJK)

5780 R Shark, Ufa is silent. (JJK)

6185 R Shark, Ufa now here. Has also R Titan Kompani programs //1395. (JJK)

6030 Radio "Nika-M4", Murmansk // FM 66.02 MHz. Schedule: Mon/Wed/Fri 11-12, Tue/Thu 10-11 and Sun 22-02 UTC. Address: Z. Kosmodemyanskoy Str., 16-35, Murmansk 183008. V/s is V.Yefremov, Director. (JJK)

918 Open Radio has the following schedule: 0300-0400 RL; 0400-0500 Open R in English (Mon-Fri), VOA Europe (Sat/Sun); 0500-0530 BBC WS; 0530-0600 BBC WS (Mon-Fri); 0600-0700 BBC WS; 0700-0800 VOA in English (Mon-Fri); 0800-0830 RM WS in English (Mon-Fri); 0830-0900 VOA Europe (Mon-Fri); 0700-0900 Open R Europe in English (Sat/Sun); 0900-0915 BBC WS; 0915-1400 VOA Europe; 1400-1700 Open R in Russian; 1700-1900 RL; 1900-2100 VOA in Russian; 2100-2200 BBC WS and 2200-2300 VOA Europe. (Moskovskie Novosti via URSC via ARC)

R Polis seems to be only on 1053 kHz (no longer on 6045 kHz) since November. Schedule: 0430-1700. (Dave Kenny via Communication via DIS)

R Vedo, Volgograd latest schedule: 0500-0900 (Sat/Sun) on 1467, 5915, 7125 and 7185 and 1500-1900 (daily) on 1467, 7185, 9655, 11760 and 13710 kHz. (A.Silickas via Communication via DIS)

AWR Europe via Russia transmitters is not as the schedule issued suggests. AWR have released the schedule while admitting that they have no control over frequencies allocated by the Russians. (Dave Kenny via Communication via DIS)

R Art, Moscow broadcasts business and cultural news, also carrying popular music and commercials, in Russian. Programs are presented by voices of popular actors/actresses of theater and cinema. Address: Academician Koroleva Street 19, 127427 Moscow. Schedule is 0515-0700 on 11655 and 1500-1800 on 11700 kHz. (BBCMS via Communication via DIS)

SLOVAKIA: 1521 is now running in parallel with 1098 kHz. Both seem to be 24h/day. (OA via ARC)

Slovak Radio's new external service in Slovak has been heard at 0130-0200 on 5930 and 7345 kHz and at 1900-1930 on 9505 and 9580 kHz. The station is announcing as well an hour long program at 1400 on 6055, 7345, and 9505 kHz. (BBCMS via SCDX)

UKRAINE: 1476v R Nezelesnic, Lvov announced this address: Ulitsa Teatr Romanova 12, 290005 Lviv (not 100% sure). Carries R Liberty in Ukrainian in the mornings and late in the evenings. Own programs seems to start at 1500 UTC on Sundays. Has a rock-format. (JJK)

1395 Trans-M-Radio, Simferopol, transmitting 0600-0900, is the first local radio station in Crimea. It started on June 22, 1992. R Mayak uses the frequency 0900-0600. (SWN via ARC)

1550 Radio Gromada, Chernihiv/Chernigov, is a private station. (I.Sannikov via Play-DX via DIS)

UNITED KINGDOM: The BBC have delayed the launch date of their new rolling news service in an effort to try and placate listeners. The new service will not now launch until the Governors of the BBC are "satisfied that transmission arrangements meet the listeners' needs throughout the UK". In practice they have set an "operational planning" date of April 5th, 1994 for its launch on Radio Four's Long Wave frequency. (AMFM)

The BBC has brought in massive cuts to its six local stations in Scotland. The services in Aberdeen, Orkney, Shetland, Tweed, Solway and the Highlands previously opted out from Radio Scotland for their own local programming. Under the new scheme, their only local input will be for short news, weather and travel bulletins. (AMFM)

GLR, the BBC Local Radio station for London, are to move to an all-talk format for an hour at breakfast, lunchtime and afternoon drivetime. Station staff are reported to be unhappy at the move which was forced on them by management higher up in the BBC. Management at the Corporation are keen to push the news side of BBC Local Radio to distinguish it from ILR, which in most parts of the country has diluted its local news output. GLR had argued that they were a special case given the rather different competition they face to most BBC Local Radio stations. (AMFM)

603 Invicta R is now continuous 420 watts, earlier 120 watts day and 420 watts nights. Invicta on 603 and 1242 have same program, but commercial advertisements are split, ie. two separate feeds controlled by presenter. (JHY)

Local community station R Maldwyn, serving Newtown and Welshpool, will eventually take over 756 kHz, as the final BBC R Shropshire news bulletin heard on 756 kHz confirmed. (Tony Rogers via Communication via DIS)

BBC R Shropshire is not quitting 1584 kHz after all. (MWC via ARC)

Sunshine 855 v/s is Dave Porter. (many)

1458 BBC R WM v/s is Tony Wadsworth, Programme Organizer (J.Burnell)

1323 South Coast R v/s is Guy Hornsby, Programme Controller.
(J.Burnell)

Essex ILR station Mellow 1557 has increased its weekly reach to 26% and is now second to Radio One in its transmission area, according to new research from the station. (AMFM)

Capital Radio has bought Midlands Radio Group. This now means that just three groups control 50% of ILR stations in the UK. Southern Radio Holdings own Ocean, Southern, Invicta, Mercury, Mellow, etc (a monopoly on the South and East) while GWR have very expansionist plans in the west, which now include Spire (Salisbury) and 51% of Isle of White Radio, and include most of the West country, as well as aspersions towards Ludlow. Now we have Capital taking over Midlands. Apparently their sale of Rivera Radio in France last month was to fund this move. (Julian Lorkin in InterNet)

Frequency allocations for the new national Virgin R are likely to change from previously published information. Previous reports indicated use of 1197 and 1215 kHz as main channels, supported by ex BBC local radio channels such as 729, 1485 and 1521 kHz. In an attempt to rationalize the distribution of frequencies nationally, Virgin R is hoping to use only channels between 1197 and 1242 kHz. Specific allocations are not yet public and if the Radio Authority doesn't give the go ahead, Virgin will fall back on the previously published frequency allocations.

It seems that frequency uncertainty will not put back start of test transmission due for next spring, and tests with new frequencies or at new sites may be brief. This could mean new UK activity on three channels, 1206, 1224 and 1233 kHz, except the already allocated channels 1197, 1215 and 1242 kHz. Any activity on channels other than 1215 kHz is intended to fill holes in the main coverage area, so transmitters are likely to be low power, probably 0.5-2 kW. (Virgin Radio via MWC via DIS)

YUGOSLAVIA: Tanjug news agency, as heard by BBC Monitoring Service, reported that R Yugoslavia External Service is broke. Management said it no longer had money to pay its power bills or staff salaries. Station Board after an emergency meeting said it would shut down unless the Serbian Government could provide operating funds. Since January 1992, staff had been cut from 180 to 140, and program hours had increased from ten to 34 daily. (MN and Mick Ogrizek via Australian DX News)

## 183. US AM/FM guide?

Newsgroup: rec.radio.broadcasting
Date: 1993-02-05 23:17:17 UTC
From: stuart@apollo.hp.com
Message-ID: <1993Feb5.231717.16192@gagme.chi.il.us>
Source record: 43621

I know this is probably one of the proverbial "frequently-asked
questions", but I have no answers to it at the moment.

What can you folks recommend to me as a good current North American
AM/FM frequency guide? Years ago, I picked up a copy of Sam's, which
I thought was pretty good, but that copy is now pretty outdated. Is
Sam's still in business? Does the World Radio/Televison Handbook
list domestic frequencies?

> falling off towers, musical tooth fillings, and the odd electrocution.

O.K. here's one for ya, the incidence of testicular cancer among
air talent. I've lost one to it and I can name at least 10 in my
immediate circle of friends. The incidence of this type of cancer
in the general population is miniscule, the incidence in the air
talent population is significant if not alarming! Do a study?
One is being done right now! I'm not at liberty to say by whom
but we'll report the results when it's done!!

## 187. SuperRadio II ?

Newsgroup: rec.radio.broadcasting
Date: 1993-02-06 03:59:13 UTC
From: Mark Field <field@bedford.progress.com>
Message-ID: <1993Feb6.035913.19102@gagme.chi.il.us>
Source record: 43625

I just called GE at 800-933-5489 and asked if they had any Model
7-2885's in
stock (SRII). I was told they had none and asked if she had any idea when
they might
get some in she asked me to hold and she would ask her manager. When she came
back to the
phone she said there was a model 7-2887 in stock and I could have it for the
same price.
Model 7-2887 is an upgraded version of 7-2885 but she couldn't tell me what
the mod was,
any way not wanting to miss a chance at a SRII I ordered it. Now I want to
know if I got
hosed, so if anyone knows what the difference between a 7-2885 and a 7-2887
(besides +2)
please let me know.

thanks,
Mark

[Moderator's Note: Mark, fix your editor *please*? This is how I received
your letter. Bill]

Greetings Netters:

Being the mid-day jock at Y-108 I would be happy to answer any
and all questions people may have. By the way our cume is about
200,000 mon.-sun. the problem is we're considered the suburban
station until now that is!!

[Moderator's Note: Although I am older than your rock demographic and do not consider myself a real 'fan' of the heavier rock, I must say that your nighttime programming sounds damned good! I hope you can sell it. I have travelled to some of the places that use Y-108 on their background music systems and they don't seem to notice the fact that instead of Madonna and such their speakers now resound with the likes of Metalica and Pearl Jam! As for your station being known as the 'suburban' station, perhaps the positioner of "doin' it in the burbs" might have something to do with it. Confidentially (yeah right!) I never thought that that positioner cast a very positive image, but then again, it aint my station :-). Best of success to you. Bill]

## 193. Looking For Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-02-06 04:08:47 UTC
From: wvhorn@magnus.acs.ohio-state.edu
Message-ID: <1993Feb6.040847.19502@gagme.chi.il.us>
Source record: 43631

I am looking for an AM/FM radio with an external AM antenna feed. I'm in an office building that neatly absorbs most AM signals to the point that the little internal loopstick antennas that most AM/FM jobs have can't pick up my local AM news station. Are there any lil radios out there that allow one to hook-up an external AM antenna?

Thanx,
---Bill VanHorne

## 194. WNEW/WQEW

Newsgroup: rec.radio.broadcasting
Date: 1993-02-06 04:09:19 UTC
From: stuart@apollo.hp.com
Message-ID: <1993Feb6.040919.19528@gagme.chi.il.us>
Source record: 43632

*** Please excuse me if this has already been mentioned here. I combed back through the posted messages as far back as my system archives them, but I saw nothing about this.
Can anyone fill me in on what happened on New York City's AM airwaves some time ago between these two stations? Two of the country's oldest and most established broadcasting traditions - WNEW and WQXR. The former was a very historic station at 1120Khz, with a format of traditional jazz and pop music, principally from the 30s/40s/50s, with some legendary programs like "Make-Believe Ballroom" and "Milkman's Matinee". It was also the longtime home of dj Al "Jazzbo" Collins. The latter was one of the country's few all-classical music commercial stations, at 1560Khz, owned by the New York Times organzation. Both stations were clearly receivable over much of the eastern US.

Sometime in the last months (year?), WNEW moved to (I think) an all-news format (are they still using the same call letters?), WQXR dropped the classical format and picked up the WNEW music format, now calling itself WQEW, still owned by the Times.

Was this just another result of financial/business decisions? It's a loss to fans of WQXR (although there have always been arguments against using AM to broadcast fine music full of subtleties and wide dynamics). Who owns or owned WNEW? And, if it is indeed now all-news, doesn't that spell imminent failure, with WCBS already serving that function? (Yes, I know, I could probably read all about it in some past issue of the Times, but I have no idea when this change occurred, and I'm sure someone here knows all about this.)
-stuart@apollo.hp.com

[Moderator's Note: Yes it has been discussed at length here. The short version is this. WNEW AM-1130 (not 1120) was sold to a guy named Bloomberg who changed it to WBBR with a business/news format. WQXR AM-1560 picked up the old WNEW format and changed it's calls to WQEW. That's it, in a nutshell. Anyone want to re-open this thread? Bill]

## 195. New York Radio News

Newsgroup: rec.radio.broadcasting
Date: 1993-02-06 04:09:35 UTC
From: slutsky@tesla.njit.edu
Message-ID: <1993Feb6.040935.19564@gagme.chi.il.us>
Source record: 43633

Some New York Radio News:

1. Jim Kerr has left WYNY-FM and will start on March 1 on WMXV (Mix 105) as the morning man. Dan Daniel has moved from PM drive to the morning slot of WYNY which will be sold to Broadcasting Partnership Inc. They will keep the country format.

2. Larry King will be heard from 3 - 6 PM on WPAT-AM. Could this mean that WPAT AM and FM will be splitting? WPAT-AM covers the New York Islanders and the New Jersey Nets. Larry King can be heard on Long Island from WICC Bridgeport, CT.

3. WMCA is increasing its power to 50,000 watts in the day and to 30,000 watts at night. Since Salem made it a religious station, their ratings have been next to nothing. Is a format change in the works?

4. There will be a new station at 103.1 FM from Bayshore Long Island. Its calls are tentatively WBSI. Paul Colford of Newsday reports that Ron Gold the general manager will not say what the format will be. His guess is that it will be an oldies station since Dennis Flacone who worked in the music department of WCBS-FM will be the program director. This station will begin broadcasting on February 10at 1:03 PM.

Bruce Slutsky
New Jersey Institute of Technology

[Moderator's Note: WMCA is going to 50,000/30,000 watts? On 570khz? I thought that 570 was a regional channel with a maximum of 5000 watts. What am I missing here? Did they change frequency? Bill]

## 198. WBBR launches Bus Shelter Radio... and crashes..

Newsgroup: rec.radio.broadcasting
Date: 1993-02-15 01:56:31 UTC
From: slutsky@tesla.njit.edu
Message-ID: <1993Feb15.015631.8018@gagme.chi.il.us>
Source record: 43636

And just what is Bus Shelter Radio? I am quoting Emily Sachar from New York Newsday of February 10,1993.

"Hoping to stave off another cacophonous nightmare in noisy New York, officials yesterday put a halt to all news radio playing inside 25 bus shelters.
The radios were installed without the city's knowledge early this month by Gannett Outdoor Advertising on behalf of Bloomberg Business Radio 1130-AM [WBBR] which debuted as a round-the-clock station on Jan. 4.
For $150,000, Bloomberg paid for print ads to be mounted on 50 bus shelters; at 25 of those shelters, the campaign also included the real thing-radios playing Bloomberg news according to a Gannett spokesman.......Gannett says it heard no complaints from bus patrons. But the city which licenses Gannett to maintain advertising at the city's 2,800 bus shelters, said the plug must be pulled."

You can't blame Bloomberg and Gannett for being innovative. But according to the old saying "You can't fight city hall."

## 199. Starting an FM Station?

# 200. Re: EBS Mistake in San Antonio

Newsgroup: rec.radio.broadcasting
Date: 1993-02-15 02:02:24 UTC
From: blair@obdient.chi.il.us
Message-ID: <1993Feb15.020224.8221@gagme.chi.il.us>
Source record: 43638

In article <1993Feb1.232258.7899@gagme.chi.il.us> KAZEL@vmd.cso.uiuc.edu writes:
>
>On Saturday morning, February 20, 1971, NORAD accidentally activated the
>national EBS system. While many stations realized it was a mistake, a few
>stations (including KHJ in Los Angeles and WGN in Chicago) actually ran
>the 'NATIONAL EMERGENCY' tape.

Mitch et al:

I'm sure your recollection of this incident will be cause for many of us
to dredge up old war stories about this incident. Here's mine:

I was program director of WLRW in Champaign-Urbana, IL, at the time this
message cleared the wire. It moved somewhere around 9-10am, when the
fledgling Saturday morning part time guy was doing his (I think) second
airshift ever. I was en route to the station when WLRW, I'm proud to
say, followed the posted EBS instructions and signed off the air, instructing
our audience to listen to another station (WDWS?). Around the time I
got there and dashed in the back door the teletype clacked over a painfully
slow message cancelling the emergency, BUT this was NOT accompanied by the
two authenticator words in the red envelope. We stayed off the air until
we heard WMAQ broadcasting normally.

WHY am I proud that we went off the air? Because we were one of only a
couple dozen stations nationwide that actually followed procedure to
the letter. The vast majority didn't believe the first message, which
was, in fact, a bona fide emergency message. And this served to demonstrate
the poor design of the EBS at the time and the immediate need for overhaul, as
well as the need for improved training at virtually every facility in the US.
'Cept ours, natch :-).

Incidentally, the appropriate EBS deactivator message wasn't transmitted
later that day, or since, so we're still under alert, waiting for the
bombers to fly over from....er....ah..... wherever country it was when they
left it :-).

>Sam's still in business? Does the World Radio/Televison Handbook
>list domestic frequencies?
> -stuart@apollo.hp.com

A quetion worth answering every once in a while:

For my money, the most accurate guide out there is the M Street Radio
Directory. M Street is a listing of every radio station in the
US and Canada. with addresses, ownership, format, power, frequency,
and even brief history of ownership/format/tech changes. M Street
does not list station personnel. M Street *does* include the latest
Arbitron, Willhight, BBM (Canada), Asesores (Puerto Rico), and
Birch (well, the final ones anyway) ratings.

M Street is $35 from M Street Corp., 304 Park Ave. S. Floor 7, NY NY
10010 USA. Phone +1 212 473 4668 FAX +1 212 473 4626.

Tbe Broadcasting and Cable Yearbook will release its 1993 edition
soon. BCY is huge, in two volumes this year, with everything in M Street
except the ratings, but with TV, cable, programming, history, and all
kinds of other info. It's also VERY pricey...list $159.95, pre-pub
discount $143.95. Call 1-800-521-8110 in the US for info...or write
PO Box 31, New Providence NJ 07974-9904 USA.

FM Atlas is now in its 14th edition. It lists only FM in North America,
including maps of every FM transmitter, listings by frequency and
by geographic location, powers, formats, but no addresses or
personnel. FM Atlas is the only guide to list stereo and subcarrier
info, and station slogans. FM Atlas is $12 postpaid from Bruce Elving,
PO Box 336, Esko MN 55733-0336 USA. Tel +1 218 879 7676.

FM Atlas and M Street each publish newsletters as well.

The National Radio Club puts out directories also; I've never seen them
myself.

Scott Fybush -- fybush@world.std.com
Satisfied customer of all the above, but no other connection!

## 202. FM portable radio broadcaster

Newsgroup: rec.radio.broadcasting
Date: 1993-02-15 02:02:44 UTC
From: s29@osiris.cso.uiuc.edu
Message-ID: <1993Feb15.020244.8254@gagme.chi.il.us>
Source record: 43640

Hello all,

Damark (an electronics catalog) once sold an electronic device that I
am trying to locate.

Description: This device has an ear phone plug that plugs into any normal
ear phone jack on any portable CD player or cassette player
and the other end plugs into a standard car cigarette lighter
socket. This device then takes the output from the ear phone
jack and turns it into an FM signal that can be picked up on
a car radio thus "broadcasting" your CD player so you will
not have to directly wire your portable unit into your car
radio.

I would like ANY help ANYONE can provide on finding a company who makes
this, a company who sells this or any electronics article that has the plans
in it so I can build it.

Please send your comments to:
Don Ingli

|> AM/FM frequency guide?
[...]
|> Does the World Radio/Televison Handbook
|> list domestic frequencies?

The WRTH lists all North American (USA, Canada, Mexico) and I believe Central American AM (medium wave, ie, 530-1610 KHz) stations above a certain power (I think 1 kW).

The stations are sorted by frequency, not by location or callsign, so this listing is good if you are listening on a certain frequency and want to know the station, but not so good if you want to know the frequency for a station or get a list of stations in a certain area. Also, the information listed is limited to frequency, callsign, location, power, hours of operation, and type of antenna (e.g., directional or not). There is no listing of network affiliations or format.

I, too, am interested in an answer to this question, especially if there is a listing of FM stations somewhere, or a listing of stations by location/market, which would be great for travelling.

## 204. Northeastern Caribbean Radio - LONG

Newsgroup: rec.radio.broadcasting
Date: 1993-02-15 02:18:55 UTC
From: rc@cmr.ncsl.nist.gov
Message-ID: <1993Feb15.021855.8589@gagme.chi.il.us>

Broadcasting Observations - Northeastern Caribbean, Jan - Feb 1993

I've just returned from a two-week vacation on Guadeloupe, in the northeastern Caribbean area. The following broadcasting "impressions" were obtained from hotel-room listening some evenings and car-radio listening some days. As in most non-USA locations, stations usually identify by slogans, not call letters, if they identify at all.

Background:
Guadeloupe is a French overseas Department (DOM), consisting of the main twin island, and a number of smaller islands. Most of the smaller islands are close to the main island, but the French part of St Martin, as well as St Barts, are about 200 km to the north, yet politically part of Guadeloupe ( from now on I'll use its ham prefix, FG). As an integral part of France, FG is part of the European Economic Community - EEC.

FM - Guadeloupe:
The FM band is seething with activity on Guadeloupe. It follows the European allocation, starting at 87.5 MHz instead of the normal Region 2 88.0 MHz. The main island pair, with overall dimensions about 50 by 70 km, has rather rugged terrain, thus the need for quite a few repeaters or translators. The main stations seem to have at least two frequencies, and probably a number of gap-fillers. In addition there seem to be loads of small locally-run stations. >From their coverage, I would guess the local stations to be roughly the equivalent of a good USA Class D station. There is only one significant radio tower on the island (RFO's), all other stations use a simple antenna on a building - or possibly a mountain top for the Government stations. My French (or Creole) is not good enough to correlate all the DOZENS of stations. Near Pointe a Pitre (the largest city), Radio France Outre-mer (RFO) can be heard on 87.6 and 100.3 MHz. SUN FM - a metropolitan French network - advertises two frequencies. Most stations play local popular music - Zouk, etc. Steel bands aren't a French West Indies product. RFO plays some classics and a bit of old-time big band at times like Sunday morning. It was really a surprise to hear a sequence of the best old-time Spirituals (in French) on an FG religious station.

FM - Nearby Islands:
With the car radio and/or my Sony IC-2002, from about 100 m elevation, near the northwestern tip of FG, I could hear a number of English-language FM stations. This is news, since, on a trip to Antigua only a few years ago, there was absolutely NOTHING on FM there. I had to get to a high spot to be able to hear FG from Antigua, back then. Now there is a chain of FM stations IDing as Gem Radio, as follows:
Antigua 93.9 Montserrat 94.5 BVI 90.9 St Maarten 92.9
St Kitts 92.7 "and soon coming to St Lucia".
I could hear Antigua and Montserrat well - especially when line-of-sight to them - only 70 or 80 km away. I heard St Kitts weakly at least once from a good location. They mostly play a US satellite rock service - with an 800 number - 800-832-0208 - which should identify it to many of you. They use Satellite News Network. I also heard the BBC fairly weakly on 89.1 from a few

places, and assume that it was coming from Antigua or Montserrat, and seemed to be only horizontally polarized - weak when car ant. vertical. From a Really Good Location, altitude about 300 m, I also heard Spanish from Puerto Rico, about 500 km away, one afternoon. Also US Virgin Is. on 104.3 MHz.

AM:
FG seems to be down to just one AM service, RFO on 640 kHz. It seems to me that they used to have a channel about 1240, but I didn't hear it. The BBC and
Deutche Welle share a Large shortwave relay station on Antigua (which I'm sure
is also used by the VOA), which partly accounts for the following. All listed

stations are in English except RFO.
Freq Location Comment
535 Grenada GBS, covers quite well, some VOA news.
620 Antigua ABS, Antigua and Barbuda Broadcasting Service, strong,

BBC news in addition to their Caribbean/local news.
640 Guadeloupe RFO, see above, local.
885 Montserrat ZJB, Radio Montserrat
895 St Kitts VON, radio voice of Associated States of St Kitts &
Nevis
930 Antigua Radio Antilles "RA", very strong, news from BBC, VOA,
other VOA evenings, and an hour of Deutche
Welle's English language service each evening.
1100 Antigua ZDK, "Magic Radio", VOA news, plays BBC all night,
except Saturday, when they have local music and RA
does the BBC.
1610 Antigua Paid religious, not really all that strong.
Note that the old late-nights-only VOA relay on about 1580 from Antigua was not heard. They now seem to buy block time on the regular stations - which sound MUCH better. A lot of South American and Puerto Rican Spanish AM stations could be heard at night. I'm surprised that I heard NOTHING from Dominica, since they used to be on the air and are no farther than Antigua.

Yes, I'm sure about the 5 kHz channels; the stations announced them.

TV: FG is on UHF, with translators all over the place. It is 625/50 SECAM. RFO has two TV services, and there were two other weak services on the hotel-room TV. The weekly TV program magazine section of the newspaper had a feature on one of the weaker services, which seems about to get stronger.

Enough, enough....

Bob Carpenter

## 205. College radio--carrier-current??

Newsgroup: rec.radio.broadcasting

Big news in the world of radio in BOSTON. At 4 pm (est) today (2-12-93) long time Fairbanks station WVBF 105.7 is dumping thier 20 + year calls for WCLB and will be known as 'Country Club 105.7' and YES they will be playing country music. This surprise move is sure to upset the owners of WCDJ who was rumored to turn country, VBF did this real quiet. Boston now has a country station once again.

As a side note there is a 24 hour country station in the area, about 28 miles south of Boston there is WCAV 97.7, they are in Brockton Ma. and have been country for over 10 years and yes they do reach Boston with thier 3Kw siginal.

I hope to get the cange over on tape. Sonny Jo White said 'goodbye' to boston radio listeners once again last night.

We shall see what happens in Boston now with a country station, will they do better than WBOS did?

Andy

## 207. Boston RadioWaves

Newsgroup: rec.radio.broadcasting
Date: 1993-02-15 02:26:08 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993Feb15.022608.8852@gagme.chi.il.us>
Source record: 43645

* One word will describe Boston's radio scene this week - COUNTRY.
Yes,it'll be back full-force on Boston's airwaves starting today(2/12)
at 4pm after a 4-year abscenece. It'll will land on Fairbanks' AC
station, WVBF-105.7FM. The station will also switch call letters to
WCLB-FM and call itself Hot Young Country. The DJ line-up will not change
with an exception of Urban-oriented Sunny Joe White whose nightly urban
R&B show was sticking out like a sore thumb in the Top40 AC format anyway.

The line-up will be :

6am-10am - very popular 12-year duo of Loren & Wally.

10am-2pm - Chris Guetta

2pm-6pm - Jeff McKee

The last station in Boston to try country was WBOS-92.9FM(Soft Album Rock)
The ratings for country were abysmal. When Ackerly bought 'BOS from Sconnix
in 1989
they immediately(after 1 month) killed country format and switched
to soft AOR("Rock Without the Hard Edge) sound. In 1992,Ackerly after
losing even more money sold 'BOS to the present owner,Granum Comm. Granumm
turned the station around and it has become #5-rated adult(25-54 group)
station in Boston.

As for 'VBF's Sunny Joe White who will become unemployed for the third time in
2 years,it looks like he has worn out his welcome in Boston. He was with
CHR leader WXKS-107.9FM(KISS-108) for 12 years as PD before professional
conflicts at the Pyramid station and a drug problem forced him out of the
business a couple of years ago. Then he came to the rival CHR station,
WZOU-94.5FM (Z-94) for 1-year stint. His downfall at Z-94 was a free outdoor
rap concert this past summer which resulted in a riot by mostly urban youth
when one of the rap groups announced to perfrom did not show up for the gig
and was replaced by a talentless pop band called "Mr.Big" who had a
big Top-40 hit last summer.

The riot gave the station alot of bad publicity and. Sunny was canned
a month. Z-94 fine-tuned CHR sound(eliminated any rap from their playlist)
to appeal to a slightly older crowd(over 18 :-). He landed at 'VBF this
past fall and now got canned again.

You have to give WVBF credit about being really low-key about the switch
to country. The Boston Globe which often doesn't get their story
right about the happenings in the Boston radioland predicted 2 weeks ago
that another station,WCDJ-96.7("Smooth Jazz), will be going country.
Greater Media(currently owns AC leader,WMJX-106.7FM) which will
acquire 'CDJ by April 1st still might change the station's format but

it's really unlikely that they're going country.

-Mark

Yeah. Even completely non-commercial college radio stations may feel
this way. Many don't, though.

## 209. random thoughts about media, trends and the NAB.

Newsgroup: rec.radio.broadcasting
Date: 1993-02-15 02:27:26 UTC
From: mitcheec@ctrvax.vanderbilt.edu
Message-ID: <1993Feb15.022726.8930@gagme.chi.il.us>
Source record: 43647

About 40 years, or so, ago, I first started hearing about the National Association of Broadcasters ("This station is a member of the National Association of Broadcasters and is proud to display the seal of good practice!").

About 30 years ago, when I began working professionally in the industry, I started paying attention to the NAB, what it did and, especially the NAB convention.

About 18 years ago, I attended my first NAB convention, got sore feet, loved it. Have even been to a few more since then.

About 17 years ago I became convinced that computers were going to change the way we do everything in life and, as a subset of that, everything in electronic media. The conviction became so strong over the years that the study of the confluence of computers and communication became increasingly important to me.

As a consequence I am now well away from "broadcasting," working on a terminal degree in educational technology at Vanderbilt University here in Nashville.

For years, the industry I left behind seemed not to notice that I was gone. (g) But then the indicators began to change, every so slowly at first... beginning with the not-quite so mainstream television journals (E&ITV, Videography and the like), later Video Systems, Broadcast Engineering and the late, lamented BM/E (most of which I've continued to subscribe to and read) began to report signs of the coming change, the revolution in the works.

This week, two things happened at my house which I think are watershed: I received a copy of the premiere issue of "Wired," which is the first cyberpunk magazine I've ever had mailed to me for free (I had to discover Mondo 2000 on the news stands). Inside Wired, it says this: "The medium, or process, of our time - electric technology - is reshaping and restructuring patterns of social interdependence and every aspect of our personal life.

"It is forcing us to reconsider and re-evaluate practically every thought, every action and every institution formerly taken for granted.

"...the computer 'press' is too busy churning out the latest PcInfoComputingCorporateWorld iteration of its ad sales formula cum parts catalog to discuss the meaning or context of social changes so profound their only parallel is probably the discovery of fire [actually, I'd rank the discovery of hyperbole right up there with the discovery of fire. em]

"WIRED is about the most powerful people on the planet today... the people who not only forewaw how the merger of computers, telecommunications and the media is transforming life at the cusp of the new millennium, they are making it happen."

ahem.

The other thing that happened at my house was my receipt of information about the 1993 NAB convention. At least I *think* it's the 1993 NAB convention... it's in April, in Las Vegas and lasts for 4 days so it *must* be the NAB convention, right?

The cover of the brochure says this: "This is just a Convention like Woodstock was just a concert."

"NAB Multimedia World Conference and Exhibition."

Inside, the executive committee for the show reads like a who's who of who's *not* in broadcasting.

Well, we have our nation's first MTV presidency, I guess even the old NAB can change too, right? Now give that seal another fish and let's hear "Lady of Spain" on the squeeze horns!

<arf!>

## 210. Strobe Aircraft Warning Lights

Newsgroup: rec.radio.broadcasting
Date: 1993-02-15 02:31:59 UTC
From: rc@cmr.ncsl.nist.gov
Message-ID: <1993Feb15.023159.9055@gagme.chi.il.us>
Source record: 43648

I drive around the Washington Beltway 1 to 3 times a week, past WWDC-FM's tower. (Former home of Howard Stern and "Greaseman", ulk) About half of the times I pass, they have strobe-type aircraft warning lights. On the other half, just the old flashing red beacons. Did they get a bad lot of strobe beacons, or what?

Curious.

a.k.a. Bob Carpenter

## 211. Detatchable Penis song, what are the rules pertaining to this?

Newsgroup: rec.radio.broadcasting
Date: 1993-02-15 02:32:03 UTC
From: mac18@po.CWRU.Edu
Message-ID: <1993Feb15.023203.9030@gagme.chi.il.us>
Source record: 43649

Hey, the modern rock station here in Cleveland, WENZ, just started playing this King Missile song called "Detachable Penis". This song has the word "penis" said many times, probably about 100. The End said that they can only play it once per day because of trouble with lawsuits, or something like that. So what's the rule on this?

Just curious

--
Mike Cornell | "I woke up this morning, with a bad hangover,
mac18@po.cwru.edu| and my penis was missing again.
-----------------| This happens all the time, it's detachable."
Let's Go Flyers! | -King Missile

[Moderator's Note: I, too have heard that record here in Chicago (can't remember the station) and I must say that despite the fact that stuff like this usually leaves me cold, the 'Detatchable Penis' song is very cute and entertaining. Bravo! Bill]

## 212. WCCC-AM and WDRC-AM (Hartford, CT) going to Talk format

Newsgroup: rec.radio.broadcasting
Date: 1993-02-15 02:32:52 UTC
From: jkearman@arrl.org
Message-ID: <1993Feb15.023252.9097@gagme.chi.il.us>
Source record: 43650

>From the Hartford (Connecticut) _Courant_, Friday, February 12, 1993:

Local AM radio turning to hot talk-show trend

"Talk is cheap; talk is easy; talk sells--syndicated talk
radio, that is.
"Just ask WCCC-AM (1290) and WDRC-AM (1360), both of which
will change much of their broadcasting schedules to syndicated talk
shows beginning Monday [February 15], following a trend set by AM
stations in Connecticut and across the country."
..
"Beginning Monday, WCCC-AM will start marketing itself as
'Talk 1290,' and its weekday schedule will open with a simulcast
[from WCCC-FM] of Sebastian's 6-1to-10-a.m. show, but then will
go to syndicated talk for the rest of the day.
"From 10 a.m. to noon, WCCC-AM will broadcast Lee Mirabel,
who deals with matters such as lifestyles and feelings; from noon
to 1 p.m., longtime investigative reporter Jack Anderson; from 1
to 3 p.m., politically liberal commentator Ellen Ratner; and from
3 to 6 p.m., Larry King."
..
"WDRC has put more effort into its AM side in recent
years than WCCC [WCCC has been a straight simulcast of the FM
twin for some time]. Six days a week, from 5 to 10 a.m., it has
offered Brad Davis, who has a modest but steady following for his
show that emphasizes talk and interviews about current topics.
"After Davis leaves the air weekdays, WDRC-AM goes to a
musical format that it picks up via satellite; the format
emphasizes easy-listening hits from the past four decades. Davis,
for his part, plays two or three records per hour when he is on.
"Starting Monday, its weekday schedule will be Davis from
5 to 10 a.m.; music from 10 a.m. to 1 p.m.; the Dolans, financial
advisers, from 1 to 3 p.m.; Gene Burns, who talks about current
topics, from 3 to 5 p.m.; music from 5 to 6 p.m.; simulcast of
WVIT, Channel 30's television newscast from 6 to 6:30; music
from 6:30 to 10; Dr. Joy Browne, psychologist, from 10 p.m. to
1 a.m.; and music from 1 to 5 a.m.
"WDRC general manager Wayne Mulligan says the changes
are being made 'basically to provide and additional service....
I think there's a segment of the audience that would prefer to
hear talk in the afternoon. I think this may attract a younger
listener to some of the day parts.'
"WDRC-AM's ratings slipped during the most recent rating
period, but M ulligan says that's not the reason for the change.
'I don't think the last [ratings period] is representative of

what this format is doing.'
"The syndicated talk shows that WDRC is bringing in all originate at WOR-AM (710) in New York City, the talk station that is owned by WDRC's owners--Buckley Broadcasting Corp. of Greenwich [CT]. ... "
...
"The movement of King from late-night to late-afternoon has affected a number of stations besides WCCC-AM. King's syndicated show is also being carried in Connecticut by WBIS-AM (1120) in Bristol, WATR-AM (1320) in Waterbury and WICC-AM (600) in Bridgeport. WPOP [1410] had carried King's late-night show until dropping it because of his time switch two weeks ago.
"Now WPOP's syndicated night schedule on weekdays, after its final live talk show of the day (Jeff Katz), is Talknet with Bruce Williams from 7 to 10 p.m.; Myrna Lamb from 10 to 11 p.m.; and Jim Bohannon from 11 p.m. to 5 a.m.
"WTIC's (1080) new night-time schedule, after Arnold Dean's live 7 to 8 p.m. sports-talk show, is Michael Harrison's local call-in talk show (which starts later if WTIC is carrying a sporting event) from 8 to midnight, and Gil Gross from midnight to 5 a.m."

[The article also discusses the barter arrangements between syndicators and stations, for advertising time, and the fact that it costs less to use syndicated programs than produce them locally. Oh, brave new world!]

Canada

Community Radio Makes Waves
---

When Gugliermo Marconi applied for a patent for what he had
perfected in 1895, he described it as "wireless telegraphy." The
name he chose tells us that Marconi fully expected the operator
of his "wireless" to both send and receive.

What quickly developed as the most popular application of his
invention is said to have shocked Marconi. From the beginning,
radio broadcasting has been, in large part, a one-way street: a
powerful transmitter at one end and thousands of receivers at the
other, their operators quite content to sop up what they were
being fed in total passivity.

By 1932, Bertolt Brecht had heard enough of the new medium to
remark: "Radio could be the most wonderful public communication
system imaginable... if it were capable, not only of
transmitting, but of receiving, of making the listener not only
hear but also speak."

The Brecht statement opens the introduction to _A Passion for
Radio_, a new book edited by Bruce Girard. A few pages in, the
reader realizes that -- all over the world -- the medium has
suddenly become something very close to what Brecht had in mind:

* An elderly widow in Sandy Lake, Ontario, uses a radio station
to ask her one of her grandsons -- any one will do -- to come and
chop firewood for her.

* The Feminist Radio Collective of Peru, angered by blatant and
public sexual harassment, broadcasts spot announcements that
warn: "Remember, men. You don't dance the lambada on a minibus!"

* "Echo of Moscow" -- an unlicensed, commercial station "located a few steps from the Kremlin" -- moves its sign-on back to provide the city's only coverage of an attack on the Lithuanian radio and television building by Soviet forces.

One of the 27 contributors to _A Passion for Radio_, Eugenie Aw, rocked me back on my heels with this seemingly innocuous statement: "Ideas, emotions and feelings are better expressed by voice than by a text read from a letter from the listener which lacks the original rhythm and intonation."

Reading those words, I felt a flush of shame: my memory took me back to 1985 and my first days as a CBC (Canadian Broadcasting Corporation) radio announcer in Montreal. My duties included reading messages heard "on the Northern Service" that covered the huge area above the tree line.

It was only after I had converted the message into my style of speaking that I would consent to croon it out over the CBC's massive transmitters.

_A Passion for Radio_ realigned most of my thinking on community broadcasting. I'm afraid I had equated it with the sort of chaos I'd heard in the early days of Radio Centre-Ville (a Montreal community radio station) -- gleeful amateurs turning up late for their shifts to play scratchy discs in the wrong sequence and sometimes at the wrong speed.

I wouldn't have missed _A Passion for Radio_ for anything. After all, it isn't often you get to read a book that changes your attitudes. maybe it's time I swallowed my pride and gave Radio Centre-Ville another listen.

## 215. Bahamas Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-02-17 23:22:40 UTC
From: Roger Chesser <CHESSER@ukcc.uky.edu>
Message-ID: <1993Feb17.232240.5556@gagme.chi.il.us>
Source record: 43653

I just returned from a trip to Nassau in the Bahamas islands.
The Bahamas are popular vacation spots for people in the eastern
half of the U.S.; the islands are just a few minutes by jet or
a couple of hours by boat off of the Florida coast.
In Nassau there seem to be only one AM, one FM, and one TV
station. The call letters for all three are ZNS, pronounced
"zed-n-s." Programming on the radio stations is a mix of
US pop music and carribean music. They do quite a bit of
local news, though the weather forecasts seemed to be wrong
all the time. The TV station operates all day and into the
evening on weekends, but only late afternoon to late evening
during the work week.
The popular resort hotels get US television by satellite, I
assume. It's a most peculiar mix at the place where I stayed.
NBC-TV was represented by a station from Atlanta, GA;
CBS-TV was from Raleigh, NC; and ABC-TV came from
WABC-TV in New York City! They also had ESPN, and HBO,
but no CNN!
The FM band has only the one ZNS station. On AM there are a couple
of Bahamian stations, and several Florida stations which bounce
in. WIOD, WMRZ, WINS and some spanish language stations cross
the water into Nassau. Roger Chesser, WUKY, Lexington, KY.

## 216. Help--LPB??

Newsgroup: rec.radio.broadcasting
Date: 1993-02-17 23:23:04 UTC
From: jow@eniac.seas.upenn.edu

Source record: 43658

an8785@anon.penet.fi (8 February 1993) writes:

>Does anyone know where I can get a comprensive list
>of AM stations that broadcast in stereo? Thanks.

[Moderator's Note: Why don't the readers all send in AM stations in their area that they *know for a fact* are stereo. Meaning that they have personal knowledge about. I will try to maintain a list. Bill]

Well, anonymous, that's a pretty tall order. Out of about 5000 AM stations in the US, close to 1000 now have or once had stereo. Worldwide, I'm told a significant percentage of Canada's several hundred private AMs are stereo, as well as many of Australia and New Zealand's AMs, Japan's AMs, and those in several other nations as well.

One other complication: the standard in use outside the US is almost universally Motorola C-QUAM...but in the US, there are still a handful of stations (mostly in New York City) using the alternative Kahn standard. The FCC is proposing to make C-Quam standard now, 10 years after their desire to "let the market decide" killed off AM Stereo in the US, probably for good.

Here in my region of the Northeast US, stereo AMs include:

MA 740 WJIB Cambridge
1030 WBZ Boston
1150 WMEX Boston (presently not in use)
1510 WSSH Boston (presently not in use)

All are C-QUAM.

Some C-QUAMs heard well over the eastern US at night include 1180 WHAM Rochester, 1190 WOWO Fort Wayne IN, 890 WLS Chicago, 650 WSM Nashville, and many Canadians.

>Any suggestions?

Get
-a used Bird wattmeter.
-Half a dozen cheap DVMs. You can't have too many.
-A good scope. I'd recommend an old Tek 200-series... they are hard to kill
and easy to repair, but they are also expensive to ship.
-A cheap spectrum analyzer that will go up into FM. My first recommendation
would be one of the Tek plug-ins, if you bought an old Tek scope. They
sell for about $300 on the surplus market around here.
-A Weller temperature-controlled iron and a bottle of liquid rosin flux.
-A cheap Benz-o-matic propane-air torch. $10 at the hardware store.
-A Heathkit grid-dip meter. You can't survive without one.
-A bottle of Tweek ($9) and a case of Cramolin spray ($10/bottle).
-An MRL 2-track alignment tape, a cassette alignment tape, and a cart
alignment tape. Don't buy the RCA ones.
-A good frequency counter. Avoid the cheapies. Make sure it goes up into
the 200 MHz range and has an adjustable threshold level.

## 222. Country music is back in Boston!

Newsgroup: rec.radio.broadcasting
Date: 1993-02-17 23:28:36 UTC
From: fybush@world.std.com
Message-ID: <1993Feb17.232836.5829@gagme.chi.il.us>
Source record: 43660

After an absence of almost 3 years, country music has returned to the Boston airwaves. Adult contemporary WVBF-FM Framingham-Boston became 105.7 WCLB, "the Country Club" at 4PM Friday 2/12/93.

WVBF began life in the early 60s as WKOX-FM simulcasting then-1190 WKOX Framingham. In 1971, WKOX/WKOX-FM were bought by Fairbanks Communications. The FM became WVBF (for Virginia Brown Fairbanks, the owner's wife). Initially the city's first personality-driven rock station, WVBF changed formats to AC in 1981, when morning team Loren and Wally came on board. Around the same time, the station's studios were moved to Boston's Prudential Tower.

Last year, legendary Boston jock Sunny Joe White came on board as VBF's nighttime jock. White created WXKS-FM "Kiss 108"'s CHR format in 1979, and moved to CHR WZOU-FM in 1991 after a falling-out with WXKS's owner.

Now Sunny Joe is jobless again...as are the two "Girls Club" PM drive jocks.

WCLB brings country back to the Boston market. The last full-power country station here was 1510 AM, WKKU, which abandoned the format in 1991. Before that, 1330 AM, WDLW ditched the format in the fall of 1989, and 92.9 FM WBOS junked country in the spring of '89. Since then, country has been available on several FM's from fringe markets, including 97.5 WOKQ Dover NH, 97.7 WCAV Brockton, 98.1 WCTK New Bedford-Providence.

WCLB takes the "Young Country" format to a new extreme...with rock-station-style liners and artists like Garth Brooks. Loren and Wally stay on in AM drive, Jack West (formerly of AOR WBCN-FM) joins them, Chris Guetta handles 10-2, and Jeff McKee takes 2-6. No nighttime jock has been named.

WCLB's move throws WCDJ-96.9 for a loop. Soft jazz WCDJ was bought by AC WMJX-FM/WMEX(AM) early this year, and they already had consultants working on a country format to debut on 96.9 April 1. Rumor has it those plans will be junked.

We shall see whether country survives this time in Boston. I suspect this time it might.

Oh yes, airchecks of the format change, including a 15 minute WVBF retrospective are available...as well as my Boston AM aircheck compilation. I'm especially interested in trading with anyone in the Seattle market.

Message-ID: <1993Feb17.233228.5988@gagme.chi.il.us>
Source record: 43662

In article <1993Feb15.020132.8184@gagme.chi.il.us> scoons@news.weeg.uiowa.edu (SM Coons) writes:
>Our church is looking into starting a non-commercial FM radio station. We
>have received some info from the FCC but are having a hard time making sense
>of it.
>
>I am looking for any advice on the primary steps to take to start a radio
>station, and also where to get the equipment for such a venture. Any and all
>help is very much appreciated. Thank you!

You might find info on starting a NCE church related station
from the National Religious Broadcasters. You can reach them at
703 330 7000. You could also try the National Association of
Broadcasters at 202 429 5300. NRB is having a convention in Los Angeles
February 13-16. NAB is having a convention in Las Vegas April 19-22.
By the way, I can send exhibitor guest passes to NAB for anyone on rrb
who is interested.
You can find used broadcast equipment in the Broadcast Equipment
Exchange ads in the back of Radio World Newspaper. Call them at 703 998
7600. There are various suppliers of broadcast equipment. Probably the
largest is Harris Allied. You can phone them at 317 962 8596.
Finally, doing the paperwork for a new station is a bit
complicated. There are lots of consultants who do just that. For
commercial stations, the FM channels are allocated to various
communities, so it's a little simpler than doing an NCE. With an NCE,
you have to go thru all the interference calculations (figuring
distances between the proposed station and all others on the channel and
adjacnet channels). There are consultants who do this stuff listed in
Radio World. Also, NRB may be able to advise you.
A simpler alternative which might fit your needs is to put in an
FM translator. This can rebroadcast a station whose programming you
want to bring into the community. NCE translators can get their
programming directly off the air, or by any other means (including
satellite) from another NCE station. You are not allowed to do local
programming on a translator, but it might get programming you like into
the community. Other alternatives include buying time on an existing
station or buying a channel on a cable system (either on the FM band or
a TV channel). Cable systems will often give you an FM channel for the
cost of the equipment (between $1,000 and $2,000) needed to put the
audio on the cable (a cable modulator and stereo generator). There are
various satellite distributed networks that can provide you with
programming. These networks typically feed full power stations, but
they might also feed translators or CATV stations. These include Moody,
Skylight, Bible Broadcasting Network and Family Stations.

Good luck!

Harold

## 225. Re: Detatchable Penis song, what are the rules?

Newsgroup: rec.radio.broadcasting
Date: 1993-02-17 23:32:53 UTC
From: J.Theodore.Schuerzinger@Dartmouth.EDU
Message-ID: <1993Feb17.233253.6028@gagme.chi.il.us>
Source record: 43663

I believe we play "Detachable Penis" on the college station where I work (WDCR, Hanover, NH). I remember seeing the promo packet that came with the CD single -- there was a dot-to-dot puzzle which said at the top of it, "Why is Donny Osmond so happy?" When you connected the dots, it turned out that he was holding a "detachable penis".

I don't know about the laws regarding the playing of this song, but then again, WDCR has such a small listenership that probably nobody actually hears the song!

## 226. Detachable Penis

Newsgroup: rec.radio.broadcasting
Date: 1993-02-17 23:33:11 UTC
From: WEOS-FM <BLACK%HWS1%HWS.bitnet@CUNYVM.CUNY.EDU>
Message-ID: <1993Feb17.233311.6057@gagme.chi.il.us>
Source record: 43664

We have been playing "Detachable Penis" for quite some time, but in "Safe Harbor", currently after 9PM, but Feb 22 it will be midnight. According to an FCC staffer and our attorney, they "think" the sond would be considered indecent under their rules. Of course, a complaint would have to be filed, or the FCC would have to hear it. It is a funny song, but we live only 17 miles from an FCC monitoring station, and have left it "attached" until safe harbor.

This especially in light of WSUC in Cortland (about 60 miles from here) getting a $24,000 fine for indecency. Maybe this is why the one station is only playing it once per day.

> like that. So what's the rule on this?

There shouldn't be any problem. About 4 or 5 years ago, the FCC okayed
the use of the word "penis" on TV. Saturday night live celebrated with
a sketch about a nude beach where they said "penis" about 50 times or
so within five minutes.

Brian

[Moderator Jumps On Soapbox: With wars raging everywhere, starvation in many
countries, uncertainties about our economic and ecological future, hatreds
running amuck, riots in our cities, people dying of AIDS... it is reasuring
that the word 'penis' is now permitted on American airwaves! Save us, oh
FCC, from the ruination of lives, the cancer of profanity, the destruction of
our sensibilities that might occur if we were not so cared for by you. The
world is now safe for our kids. Bill]

## 228. Estonian Radio in crisis

Newsgroup: rec.radio.broadcasting
Date: 1993-02-17 23:37:16 UTC
From: tijoma@uta.fi
Message-ID: <1993Feb17.233716.6176@gagme.chi.il.us>
Source record: 43666

The state-owned Estonian radio corporation "Eesti Raadio" is in deep economical and administrative crisis. This was told recently by Finnish students working at the Finnish language department of the external service of the Estonian Radio.

Eesti Raadio's new director Mr. Herkki Haldre has demanded that all journalistis must accept 50% cuts in their salaries. He also demands that all journalists, including those working at the external service, must give all their programmes and stories for re-broadcasting without any extra charge to the joint Finnish-Estonian radio station "Radio Hyvatuuli". Radio Hyvatuuli is a commercial radio company which leases frequencies, transmitters and studio facilities at a nominal fee from Eesti Raadio.

Mr. Haldre, 28, was nominated as director of Eesti Raadio after the latest elections when conservative and right-wing parties achieved a clear majority in the Estonian parliament.

Finnish students from the University of Tampere have been working for more than one year at the external service of Estonian radio. They have provided Western know-how of broadcasting and corrected the Finnish language used in the external service. This has been based on an agreement between Eesti Raadio and the University of Tampere. Now Finnish students refuse to accept the 50% cut in salary and the re-broadcasting of their programmes via the commercial, practically Finnish-owned channel Radio Hyvatuuli. Students say that the original agreement was between Eesti Raadio and the University of Tampere, not with a commercial Finnish radio company. Students claim that Radio Hyvatuuli just tries to exploit cheap labour-craft in Estonia.

According to Finnish students staying currently in Tallinn, it is possible that both the external and the domestic services of the state-owned Estonian radio corporation are re-organized in the near future.

## 230. Adult commercial rock stations?

Newsgroup: rec.radio.broadcasting
Date: 1993-02-24 05:27:59 UTC
From: TISS: <>;
Message-ID: <1993Feb24.052759.1821@gagme.chi.il.us>
Source record: 43668

Saint Louis has a new FM station at 105.7 mHz - KPNT (actually licensed to Saint Genivieve, MO) which is billing itself as "The Point" and playing I suppose what would be called `modern rock'. The transmitter turned on at about 2200 CST Tuesday 2/16 with repeated Indy car noises, bird/jungle noises, TV theme songs, kids speaking in Spanish, and every ten minutes or so an announcement to the effect that "tommorrow afternoon at 1:05, Saint Louis will finally hear what it's been missing". Indeed, at 1305 Wednesday programming began with an R.E.M. song.

Despite (their) claims to the contrary, this is no WXRT (93.1 Radio Chicago, a serious music station). I have little or no problem with the music they play (Elvis Costello, Roxy Music, U2, Peter Gabriel, Matthew Sweet, Timbuk 3), although they do go a bit overboard with Pearl Jam/Nirvana. The problem is in THE WAY it is presented.

Is their an unwritten law that professional radio announcers have to have idiotic fifth grade nicknames like `Mud in the Morning'? (I'm not kidding about this one - apparently he came from Baltimore; I'm ready to send him back) Perhaps half of the chit-chat this morning was of the `this radio station is SO COOL!!' variety.

Also, they've already begun the inane `40 minutes of commercial free rock 'n roll' promos. Yeccch. Also, what of the slogan "The Point"? I think we've been Point/Edge/Blade/End -ed to death (see Cleveland, Dallas, Las Vegas, Seattle, etc.). How about being real original and calling it "KPNT"? Anyway I could go on and on . . .

They're playing mature music for serious music fans, but, unlike WXRT, presenting it to us as if we were still in junior high.

Some suggestions, for KPNT and any other stations who care:

* No contests, please. Just give me good music, not time-wasting, insulting gimmicks.

* How about live ads only? They give the listener the feeling someone is there with them, not that they're being subjected to some corporate, packaged, targeted `product'.

* Eliminate playlists - shoot from the hip. Pretend you're over at a friend's house and trying to turn him/her on to some artists you really like.

* How about some real variety? A Sunday night blues show; in-studio interviews and even performances by local and touring artists; BBC news every night at 6:00; Dr.

Demento (if your market doesn't have it), etc.

* Don't live and die by the book. Go for the long term, a solid, loyal listener base from which to grow.

* No fast talking, standup comic-wannabe DJs. Just knowledgeable, truly interesting announcers not ashamed to use their real name.

Does anybody know of any commercial rock stations like this? I realize what I've been describing is more like a college station, but why don't commercial rock stations treat their listeners like adults?

73,

Earl Higgins
Saint Louis

PS: Any Baltimore listeners want that Mud guy back?

[Moderator's Note: Earl, wake up. C'mon guy smell that 'mud in the morining'. You are dreaming. But then again, it aint a bad dream. Unfortunately, listeners do not buy the radio time. A classical station in Chicago (WFMT 98.7) has just gone through contortions and marathon beg-a-thons (they call it the fine arts circle) to 'manage' to offer only announcer read copy for ads. Live reads are especcially suited to the classical format. Nothing worse than listening to a CSO concert followed by a slick rock-based ad for Toyota. Apparently, a lot of advertizers demand produced commercials, and on rock stations it is almost a part of the 'sound'. BTW I do agree with you, but "I" don't buy the ad time either :-). Bill]

## 231. CR Broadcaster Jailed

Newsgroup: rec.radio.broadcasting

ACTION ALERT

German Community Radio Journalist Jailed in Turkey

On January 22, 1993 Stephan Waldberg, a freelance journalist with Radio Dreyeckland in Freiburg, Germany was sentenced to three years and nine months in prison by the Turkish State Security Council. Waldberg had been arrested in October and charged with being a courier for the Kurdish Workers Party (PKK), a movement whose eight year war for independence has claimed more than 5,400 lives.

The facts of the case are as follows:
1) In September 1992 Stephan Waldberg travelled to Turkey to investigate the war being waged on the Kurdish civilian population by the Turkish government. He was particularly interested in discovering whether the Turkish government was using German-built weapons against the Kurdish community.
2) While in Turkey Waldberg had an opportunity to visit a PKK camp in Northern Iraq. While there he witnessed numerous bombardments, including some in which the Turkish air-force was involved.
3) On October 22, 1992 he travelled back to turkey and was arrested at the border. He was held in prison and tortured by the Turkish police for a week before the German embassy was notified of his arrest. German embassy officials visited him on November 19. At that time he gave a detailed accounting of ill-treatment and blackmail attempts by the Turks.
4) Waldberg was tried by the State Security Court, a special "emergency" court that hears political cases, such as those against PKK members. The court rejected Waldberg's defence that he was a journalist and sentenced him to three years and nine months in prison. In a statement following the sentencing the court maintained that the audio tapes, written information and lapel pins carried by Waldberg were "evidence that he helped and sheltered the PKK".

Waldberg's case has been taken up by the German journalists union which called the sentence "legal terrorism" and by a Social Democrat member of parliament who questioned the legality of the conviction and demanded that Waldberg be freed. The newspaper Badische Zeitung wrote, "They made an example of Stephan Waldberg" because he questioned the "image of a democratic Turkey, a country with law and order which is orientated towards Western Europe."

The German government has not enthusiastically sought Waldberg's freedom. According to a statement by Radio Dreyeckland the government's reticence may be explained by its unwillingness to sacrifice its close political, economic and military ties with Turkey. Germany continues to sell weapons systems to Turkey, including bomber aircraft. The statement adds that Dreyeckland "is rather a small radio station which has always been a thorn in the flesh of the government and for whose journalists it doesn't seem worth getting involved."

The Stephan Waldberg case is of particular concern to AMARC because the prosecution successfully argued that Waldberg could not be granted the rights normally accorded to a journalist because he is not a paid professional. Radio Dreyeckland, like many other community radio stations, uses a network of volunteer freelancers for its programming. According to the Turkish court's decision, volunteer journalists do not have the rights normally accorded to paid journalists.

An appeal of the decision will be heard within the next few months. Radio Dreyeckland will be sending a delegation to Ankara to witness the appeal and is hoping that international pressure will help obtain Stephan Waldberg's freedom.

Action Requested

Radio Dreyeckland requests the following:

* Fax or write the German Foreign Minister requesting that he actively intervene in the case to obtain the release of Stephan Waldberg:
Mr. Klaus Kinkel
Minister of Foreign Affairs
Auswaertiges Amt
Adenauerallee 99-103
D-5300 Bonn 1
Germany
Fax: +49-228-17 34 02

* Fax or write the Turkish embassy in your country or region protesting the trial and demanding Waldberg's freedom.

* Ask your own Foreign Ministry whether they guarantee the protection of volunteer freelance journalists.

* Please send a copy of your faxes or letters to:

Radio Dreyeckland
Alderstr. 12
7800 Freiburg
Germany
Fax: +49-761-31 868

In response to a board about stereo AM stations, here is the list for Chicago.

Chicago AM stereo radio stations:

670 WMAQ
720 WGN
780 WBBM
890 WLS

Hope this helps.

Derek

[Moderator adds: WIND (560) WGCI (1390) WTAQ (1300) WOPA (1200) and soon WJPC (950) Bill]

```
Stereo AMs
Springfield, MA: WHYN
WNNZ (was stereo when it was a classic rocker;
now is talk format and mono. I don't know
whether stereo equipment is sitting there or
not.)
WMAS (Broadcasts the pilot tone to make your
stereo indicator come on, but freely admits
that the audio is mono! Anybody know of
others that are doing this, let alone the
legality?)
Hartford, CT: WTIC
WDRC
All above are CQuam. There are several AM stereo stations audible as
you traverse the Mass. Turnpike in Worcester and Boston burbs, but can't
recall them off hand.

## 235. AM Stereo Car Radios?

Newsgroup: rec.radio.broadcasting
Date: 1993-02-24 05:33:44 UTC
From: Marc Grant <marcbg@feenix.metronet.com>
Message-ID: <1993Feb24.053344.2106@gagme.chi.il.us>
Source record: 43673

OK - riddle me this -
Why is it so hard to get a third party car stereo with AM Stereo? GM and Chrysler seem to have it offered in their high-end car stereos, but a browse around the local "Best Buy" or other superstore draws strange looks and lots of laughing behind my back when I mention "AM Stereo".

Could it be that the FCC just agreed on the standard so maybe we'll see more? AM Stereo is quite impressive (as I'm sure you know).
Signed,
Mono in the auto

mac18@po.CWRU.Edu (Michael A. Cornell) writes:

> Hey, the modern rock station here in Cleveland, WENZ, just started playing
> this King Missile song called "Detachable Penis". This song has the word
> "penis" said many times, probably about 100.

> So what's the rule on this?

I searched Vol. 47 under "Detachable Penis" and came up empty. But checking auxiliary sources I came up with some information that may be helpful.

The word "penis" may be used without limit on bonafide doctor programs. One particular edition of the Dr. Dean Edell program revealed a penis count of around 10 within a two-minute period. However, there is strong opinion that penis counts in songs must be limited to two per minute. The FCC uses a "sliding penis scale", based upon distance in meters from either coast. Minimum penis allowance applies to Manhattan, Kansas, although Chicago has a strong influence from Lake Michigan.

Local inquiries indicate that the range in the southern Bay Area is from zero penis (the previous administration's ideal) to approximately ten daily. There are, of course, governing factors, but it would seem that the song in question easily exceeds even coastal penis allowances. An important consideration is the doctrine of "penis averaging". You may find that the average daily penis count of WENZ for the previous three penis-averaging years to be sufficiently low as to allow a limited airing of the song. There are bonus allowances for penis-free years.

On the other hand, a rule which may still be in effect is the "penis substitution penalty". Put in simplest terms, a word such as "cock" is worth four uses of penis. "Wee-wee" carries no penalty, and does not count against the daily penis allowance.

You need not worry about enforcement. The FCC has installed new equipment in the top twenty radio markets that tallies the uses of limited allowance words. When WENZ's penis allowance expires, an automatic citation will be sent with an invoice for forfeiture.

My question for y'all is: Does the issuance of the citation reset the penis counter and/or change the allowance? No one seems to be clear on this.

> Just curious

Me too.

Apparently playing it is OK, since they play it regularly on KROQ in Los
Angeles. The "world famous" KROQ (as they bill themselves) is one of the more
popular stations in LA, and in my opinion the best of the big commercial
stations.

I can't imagine there being any FCC regs against the use of the word "penis". It's a perfectly clinical term, and is used all the time on talk radio. I'll bet it's just the station limiting play in order to avoid bad publicity...maybe they're getting close to license-renewal time.

BTW, what King Missile album is that song on? I'm new to that particular band, and only have one album...is there a new one out?

Yes, a quick return to the radio list. This is to welcome Rocket 95, WRQI in Rochester, NY! The >4th< market for N.Y.State!

Also, there are a few additions to the list of cities that may get Howard soon, he had a list of about 30 markets but lost the piece of paper that he wrote them on (typical :-) He remembered about 5 at the press conference, take a peek to see if Howie is coming to -your- town!
---

Welcome to the monthly Howard Stern Radio Network posting! These are radio stations currently carrying the show. Also included are some cities which may pick up Howard in the future. All times are local times. Thanks to everyone who has sent e-mail making corrections and/or additions, they are greatly appreciated! Please continue to do so!

Last update: 02-19-93

*changed calls to KFBI?

End times have been left open since we don't know when Howard will shut up :-)

To write Howard:
923 K-Rock
600 Madison Avenue
New York, NY 10022

FAX: 212-759-KFAX (5329)
Prodigy: KROK92A (not sure if Stern crew reads it)

Cities that don't have the show, but eventually a station will pick him up:

Phoeniz, AZ - very likely
Fresno, CA - how much longer to wait?
San Francisco, CA - which stations likely to pick him up?
Denver, CO - how much longer?
Hartford, CT - been promising this one for months
Miami, FL - two stations want to pick him up
Atlanta, GA - may happen sooner than I thought
Boston, MA - WZLX, WBCN out of the running
Detroit, MI - been promising this one for months, too
Pittsburgh, PA - how much longer?
Providence, RI - very likely
Houston, TX - very likely
Seattle, WA - how much longer?

^^^^^^^^^^^^^^^^^^^^^^^^^

The WRAL/WXIA/WABC package comes from a company called PrimeTime 24.
PT24 sells the stations via satellite in areas where network
programs are otherwise unavailable.

>but no CNN!
>The FM band has only the one ZNS station. On AM there are a couple
>of Bahamian stations, and several Florida stations which bounce
>in. WIOD, WMRZ, WINS and some spanish language stations cross
^

Actually, 940 in Miami is WINZ, owned by former Home Shopping honcho
Lowell "Bud" Paxson. WINS is 1010 in NYC, owned by my employer Group
W. This confusion can be a problem sometimes. Once when I called
WIOD looking for a stringer, they told me they couldn't cooperate
with my station, "because you guys own Wins." No amount of
argument could convince the fellow at WIOD that the "Wins" we own
is in New York, not Miami :-)

Boy, I'd love a Bahamas vacation. It's been getting down around 0
Fahrenheit here at night...and up into the low 20s during the day...

Scott Fybush -- fybush@world.std.com

## 242. Boston RadioWaves(2/19/93)

Newsgroup: rec.radio.broadcasting
Date: 1993-02-25 03:30:13 UTC

Message-ID: <1993Feb25.033013.23717@gagme.chi.il.us>
Source record: 43680

* Infinity's president,Mel Karmazin, has signed a deal to to be CEO of a syndictation company, Unistar Radio Network. Basically, Unistar becomes Infinity's national distribution arm for such famous on-air talents as Howard Stern,Don Imus, Doug "The Greasman" Tracht and other top Infinity personalites from its stable of 21 stations.

Once again,the Boston Globe gave out erroneous info by suggesting that as a result of Karamazin's entry into the syndication business long-awaited arrival of Howard Stern to Boston will be on WZLX-FM. It doesn't seem likely. 'ZLX has started running brand new "The Classic Rock Station in Boston is 100.7, WZLX" station ids. They sound very slick and definetly have a K-Rock(WXRK-FM,NYC) side to them. It seems like Infinity is going to keep classic format on 'ZLX for a while. And the change in on-air talent is likely to take place in the morning drive-time and mid-day blocks any moment now.(but no Howard for sure) They also might bring in syndicated Greasman for the 6-10pm block where 'ZLX is very weak. Earlier this month The Greasman has begun simulcating his DC-based show on K-ROCK in NYC and an Infinity station in Phlly(WYSP). The victim of this move was a long-time and very popular K-ROCK personality,Meg Griffin(she currently hosts various countdowns on VH-1,music video channel).

Stern can't land on 'ZLX or the other two new Infinity stations in Chicago or Atlanta. Else, they'll be subject to the revocation of the FCC license in those markets. You'd think the Globe get the facts right sometimes!?

Imus publically stated he wants to be heard in Boston,Chicago and DC in addition to his home base in NYC(WFAN). There's been alot of talk that Celtics' o&o,financially troubled WEEI-590AM(SportsRadio) will make room for Imus in the morning. I think it would be a good idea. It can't be any worse than what they have right now(Tom Doyle and Craig Mustard) or what they had before (Andy Moes,Robert Buttery, and Suzanne Lee).

* Noble Broadcasting which is in the process of selling WSSH-FM(WISH 99.5) to Granum is also trying to unload WSSH-AM(1510) to a newly formed group that's comitted to distributing various family/health care/children information on 24-hour basis. Boston is their 1st market and WSSH-AM appears to be their first radio property.

* Boston's 14-year old CHR powerhouse,WXKS-107.9FM(KISS 108) has been named Station of the Year in the CHR category by the Gavin Report.

-Mark

## 243. Caribbean Talk Radio

Title: CARIBBEAN: TALK SHOWS KEEP GOVERNMENTS ON THEIR TOES

an inter press service feature

by eulalee thompson

kingston, feb 11 (ips) -- when indignant callers and outspoken
talk show hosts recently condemned plans to introduce a telephone
sex service in the island it took less than half a day for the
government to decide to scrap the idea.

prime minister percival patterson in a release hurriedly issued
said he had no intention of allowing the country to be used as an
offshore facility for marketing moral garbage.

''no proposal will be entertained for a service which is
vulgar, offensive or of an explicit sexual nature ... jamaican law
forbids transmission of material which is pornographic (or) lewd

this was not the first time that the government or other major
policymaking institutions had cowered under pressure from strident
callers on radio call-in programmes.

a securities act to protect the growing stock exchange tabled
in parliament in december is still pending as talk show hosts
deemed it an attempt to muzzle the media.

attempts to sweep scandals under the carpet have been thwarted.
one such scandal involving massive overspending in furnishing
government ministers' homes only this week resulted in the
conviction of a former clerk employed by the government.

in early 1992 it was a public outcry on radio talk shows which
caused patterson, then minister of finance, to resign from the
government after granting an international corporation a 23
million dollar duty waiver to import unleaded gasolene.

in the rest of the caribbean the story is the same. in trinidad
and tobago the government has started weekly press briefings
because of complaints from radio callers that the administration

is not open and that it is unwilling to explain what is happening in the economy to the electorate.

in barbados, the government is running scared with justice and public safety minister keith simmons last month complaining that something should be done to curb what is said on talk-shows. his fear is that there are too many anti-government sentiments being expressed; sentiments which are best left unsaid.

begun in the 1970s in jamaica and spreading afterwards to the rest of the caribbean, radio talk shows in the region have flourished because of their ability to get decisionmakers to sit up and listen to the population. (more/ips)

caribbean: talk shows keep governments on their toes(2-e)

caribbean:talk shows keep governments on their toes (2)

''caribbean people ... are very political, in our culture politics play a very large part and so people feel the need to express political and social news not just about local issues but about any number of international issues,'' says hopeton dunn, lecturer at the caribbean institute of mass communications (carimac) here.

radio, he says, is more attractive because it is not only participatory but also interactive.

''radio as a medium isn't one way...the audience isn't just the recipient of information on a top down basis but can also flow its views up as well. (the audience) can disagree and engage in dialogue with those involved,'' he said.

in addition radio talk shows are an easy method of communication.

''even among those people who are literate, skill levels ... are discouraging in letter writing. it is easier to resort ... to talk,'' he said.

sharpe talk, one of the newest talk-shows in jamaica, runs from 12 midnight to five in the morning -- the graveyard shift traditionally regarded as time for easy listening. the guests on the programme are government ministers and, judging from the number of calls, the show's popularity is growing.

''(the programme is popular) because it appeals to the head as opposed to the guts...the issues affect people's lives and they are up and prepared to deal with them in a more relaxed atmosphere,'' sharpe talk host michael sharpe said.

''the ministers participate (at that time of the morning) because they are aware of the impact of the talk programmes...and they can face off with the public,'' he continued.

politics covers a substantial portion of radio talk and so does whatever is topical. for example in trinidad and tobago the big debate now centres on two issues; that there is too much gyrating of the hips during the carnival and which calypso songs should be banned because they promote low morals.

issues normally range from garbage pile ups and utility bills difficulties to health matters and psychological counselling.

four of jamaica's nine radio stations produce a total of 12 talks shows daily, adding up to 45 hours of conversation each week.

trinidad's eight radio stations produce seven talk shows daily, in barbados there are five call-in programmes and in guyana, four.

Subject: Mystery Theater

Back in the mid-70s I used to do a lot of commuting between West Lafayette, Indiana and Columbus, Ohio. Around 10-11pm on Sunday evenings I used to scan the AM radio dial and find a program called *Mystery Theater*. I believe it was narrated by E. G. Marshall. Does anyone know if this program still exists and is carried by any AM/FM stations in the Columbus area?
Thanks

Steve Miller sdm24@cas.org

## 246. newswire software and data formats

Newsgroup: rec.radio.broadcasting
Date: 1993-02-25 03:35:04 UTC
From: elliss@unixg.ubc.ca
Message-ID: <1993Feb25.033504.23977@gagme.chi.il.us>
Source record: 43684

I am interested in developing newswire logging software -- that is, the software used by newscasters and sportscasters to grab stories from the wire and to edit them. What newswire data format is used in your country? About three years ago, I wrote a small logging program for CITR (UBC) Radio. At the time, we were using Broadcast News, a Canadian newswire service. If there's interest, I would post a summary of responses to this message.

## 247. Pledge-free public radio? Can it work?

Newsgroup: rec.radio.broadcasting
Date: 1993-02-25 03:35:55 UTC
From: SEB1525@MVS.draper.com
Message-ID: <1993Feb25.033555.24015@gagme.chi.il.us>
Source record: 43685

WGBH-FM here in Boston is taking a new approach to fundraising:
"pledge-free radio". Seems that they're promising *not* to interrupt
any programming with pledge drives and begathons in return for what
they hope will be a heartfelt outpouring of grateful dollars.

Who knows? Could catch on - what a concept, eh?

Are other NPR stations across the country doing something similar?

For nigh on a decade now I've been hearing about the President making speeches on the radio every Saturday. Clinton's doing it now, but I remember Bush and Reagan doing so as well.

I hear about this only as a passing reference in a news item, but I've never been able to find out which station(s) carry these speeches. (Scott F., can you tell me if there's one here in Boston?)

>
>a.k.a. Bob Carpenter

I recall from my radio days the white strobes were for towers under construction, or those not yet included on aircraft navigation maps. Once a tower was on the maps, they changed over to red. Of course, the FCC may have changed this in the last few years.

Why WWDC switches back and forth may be a question for their CE. Perhaps they're testing the red ones, or they're part of some sort of a government sponsored test.

>beacons, or what?
>

My understanding of this (thirdhand and a few years ago) was that the strobes are used during the day in lieu of painting, and the red lights are used at night. Strobes aren't used at night so the tower will be less conspicuous to the surrounding neighborhood.

## 255. WBBR Call Letters

Newsgroup: rec.radio.broadcasting
Date: 1993-02-25 03:55:26 UTC
From: e-bromberg@uiuc.edu
Message-ID: <1993Feb25.035526.24634@gagme.chi.il.us>
Source record: 43693

I'm a first-time poster, and please forgive me for reviving an old thread...but one more post about the WNEW/WQXR/WBBR changes in New York, if I may.

With all the discussion about the historic nature of the WNEW and WQXR call letters, few may be aware that the WBBR calls also have historic ties to New York City.

This material from some research I did for my M.A. degree 17 years ago...

As early as 1924---before there was a WNEW or a WQXR in New York--- the U.S. Dept. of Commerce Radio Division listed a WBBR with 500 kw on 1100 kc, assigned to Rossville (Staten Island), NY, and licensed to the Peoples Pulpit Association, 124 Columbia Heights, Brooklyn.

By 1926, the old Radio Broadcasting magazine identified WBBR as sharing the 1100 frequency with two other New York City stations: WEBJ and WFBH.

By 1927, WFBH was deleted, but WBBR and WEBJ (which was licensed to the 3rd Avenue Railway Co., 2396 3rd Avenue, New York) moved to 1170 kc. WBBR had increased its power to 1000 kw.

In 1928, WEBJ was gone, but WLTH/Brooklyn (licensed to the Voice of Brooklyn, Inc., 635 Fulton Avenue, Brooklyn) began sharing time with WBBR on 1170 kc.

In 1929, WLTH moved to 1400 kc while WBBR moved to 1300. At 1300 kc, WBBR shared time with WEVD. (The latter, of course, is still in operation at 1050 khz after many many years at 1330 khz.)

My research ended at 1932, so I cannot report what happened to WBBR after that date. Perhaps someone else can pick up on the thread of this long-forgotten station and call letters.

## 257. Three notes from "World of Radio"

Newsgroup: rec.radio.broadcasting
Date: 1993-02-25 03:59:56 UTC
From: ab276@freenet.HSC.Colorado.EDU
Message-ID: <1993Feb25.035956.24781@gagme.chi.il.us>
Source record: 43695

Here are three items from Glenn Hauser's "World of
Radio" #681, which appeared on the weekend of February 13-14,
1993.

1. George Thurman(sp?) reported in "The Chicago Sun-Times"
that Bob Lassiter is now the morning host on WSUN,
620kHz, in Tampa.

2. Buffalo K. Fooneman(sp?) and Jerry Starr(sp?) reported
in "DX News" of the National Radio Club that WMCA,
570kHz, in New York has been authorized to use 50kW day/
30kW night, even though it's on a "regional" channel.

3. Bruce Elving of FM Media says he has 100 SuperRadio II's
for sale. For information, contact him at

241 Anderson Road
Esko, MN 55733

For those who've lost track, the best times and frequen-
cies for hearing "World of Radio" in North America are the fol-
lowing:

Friday 2215(UT) on 15685kHz (WWCR)
Saturday 2130(UT) on 15420kHz (WRNO)
Sunday 0300(UT) on 7355kHz (WRNO)
Sunday 0405(UT) on 7435kHz (WWCR)
Sunday 2130(UT) on 15420kHz (WRNO)

Hauser concentrates mainly on shortwave, but pays con-
siderable attention to AM and FM broadcasting.

## 258. Re: AM Stereo Stations list

Newsgroup: rec.radio.broadcasting
Date: 1993-02-26 00:10:26 UTC

Message-ID: <1993Feb26.001026.11677@gagme.chi.il.us>
Source record: 43696

I know of two stereo AM stations in North Louisiana.

KNOE (540) in Monroe carries the Stardust satellite programming feed (big bands & ballads, etc.) music format.

KEEL (710) in Shreveport used to have a similar satellite format from a different syndicator (I don't know the name, but its DJs use the "Original Hits Station ID) with a little news and talk. Recently it has added more talk, and I'm not sure how much music it still carries. (I'm too far away to listen regularly.) One strong point is that they have live local DJs most of the day on Saturday rather than the satellite feed.

Marc Grant <marcbg@feenix.metronet.com> writes:

> OK - riddle me this -
> Why is it so hard to get a third party car stereo with AM Stereo?

If you were a car radio manufacturer and the number of AM stations broadcasting in stereo (in fact the number of AM stations, period) was getting smaller and smaller, how much effort would YOU put in to selling stereo AM receivers?

> Could it be that the FCC just agreed on the standard so maybe we'll see
> more? AM Stereo is quite impressive (as I'm sure you know).

>From a novelty standpoint, I suppose so. I used to go on about how superior FM stereo was to any AM stereo but now I save my breath. Most FM, with all the processing, clipping, and other hype has now joined the "not worth listening to" hall of fame. Of course, in addition to that AM suffers from noise, limited high frequency response, and heavy interference.

But maybe that situation will improve as more and more AMs go dark. Maybe a point will be reached where the interference from other stations will become tolerable. But then, I don't really care if the Vietnamese or Spanish programming is in stereo or not.

> [Moderator's Note: I smell the voice of Higdon. Bill]

Hey, it has all gotten worse in the past year, not better. What can I say?

I came across the following in the APC Network's media.issues conference. It is not exclusively about radio, but it does emphasize the importance of radio for groups that are culturally and politically marginalized.

bg

Copyright Inter Press Service 1993, all rights reserved. Permission to re-print within 7 days of original date only with permission from 'newsdesk'.

Title: AUSTRALIA: Aboriginal media wants equal time

brisbane, feb 23 (ips/kalinga seneviratne) -- australia has touted its new satellite television service to asia as being sensitive to the peoples of the region, but the country's domestic media itself may be guilty of bias against this country's indigenous people.

the state-owned australian broadcast corporation (abc) launched its satellite service last week, taking care to note it was ''asia sensitive''. almost simultaneously, australia's local broadcasts came under fire for being insensitive toward the aborigines.

australia's indigenous peoples make up about one percent of the country's estimated 16 million population.

according to a new study on australian television by the australian broadcasting authority (aba), during the rare times that aborigines appear onscreen, they are usually portrayed as victims, drunks or as threatening, suspicious characters.

viewers surveyed by the aba researchers also said such portrayals creates and reinforces negative stereotypes about aborigines.

''we always hear the white journalists talking about professionalism,'' said echo cole, programming manager of the western australian aboriginal media association. ''but the question should be asked: are they professional when reporting aboriginal issues? i honestly can say they aren't.''

in a recent broadcast, for instance, perth radio commentator howard saitler lashed out at australia's indigenous peoples while talking about the recent high court decision recognising the 'native' land titles of inhabitants of murray island off the coast of queensland.

''there's this hand-out mentality,'' saitler said on the air. ''youngsters have grown up believing that they don't have to

work for money, that it's just going to be handed to them.''

saitler added: ''worst, the parents tell the kids, go and rob that local store, this white people have invaded your territory, it's yours anyway.''

the segment was replayed in the conference on 'the media and indigenous australians' held here last week.

sponsored by the government's aboriginal and torres strait islander commission (atsic), the meeting was designed to be a forum for people from the rapidly-expanding indigenous media and the mainstream press to discuss issues of media stereotyping.

but only a few members of the australian commercial media came to the conference, which was attended by 300 delegates who were mainly indigenous media practitioners.

cole, reacting to saitler's broadcast, said: ''the white media need to take time out and need to talk to families in their reporting. they don't go to the people. they presume this is going to happen and report on that basis.''

as a result, said patrick dodson, chairperson of the council for aboriginal reconciliation, indigenous people are having difficulty mustering anything but a negative image of themselves.

radio broadcast executive margaret o'shane also said the lack of aborigine presence in media has made it a tool in the breakdown of indigenous cultures and values.

''when our children turn on the radio and tv, they hear a way of life totally alien to their ways,'' said o'shane. ''our ties to the land comes hand in hand with our language and culture and aboriginal media play an important role in their maintenance.''

indigenous community radio, however, has become the fastest-growing public broadcast sector in australia. last year, about 30 community radio stations broadcast over 140 hours a week of aboriginal programming around the country.

there is also a full-time aboriginal radio station in alice springs run by the central australian aboriginal media association (caama). two more such stations are set to begin broadcasting this year, one in brisbane and the other in perth.

atsic also funds the broadcast to remote aboriginal scheme (bracs), in which 82 aboriginal communities have been given the basic equipment to receive radio and television programmes and also broadcast their own.

but aboriginal journalists say the government should fund indigenous media to the same extent as abc's asian satellite service. they note while the whole bracs network got only 1.1

million dollars last year, canberra gave abc an extra 3.5 million
dollars for its overseas service.

abc receives an annual subsidy of more than 355 million
dollars from the government. (end/ips/pr/ci/ks/cb/93)

## 264. Some radio miscellany

Newsgroup: rec.radio.broadcasting
Date: 1993-02-26 22:57:23 UTC
From: fybush@world.std.com
Message-ID: <1993Feb26.225723.26733@gagme.chi.il.us>
Source record: 43702

Some radio miscellany I've been accumulating...

WSPR(AM) 1270 in Springfield MA, dark since 1991, could be back on the air soon. The one-time talker will probably return in a foreign language, though, since the prospective buyer is Edmund Dinis, who owns Portuguese-language WJFD-FM New Bedford MA.

WKFM(FM) 104.7 Fulton-Syracuse NY will ditch the classic rock format and "Kix FM" non-ID. It's been bought by the owners of Syracuse's WYYY(FM)-WSYR(AM), and will go country. Dumb move, IMHO, since it will go up against WNDR(AM) Syracuse, WPCX(FM) Auburn-Syracuse, and the new WTKW(FM) Bridgeport-Syracuse with the country format.

WJZR(FM) 105.9 Rochester NY is on the air as "North Coast Radio," with a soft jazz-adult rock format. The GM was associated with noncomm jazz station WGMC(FM) Greece-Rochester, and his father was Bill Rust, longtime owner of WHAM-WHFM Rochester.

The first Trends of 1993 are out, and without bragging too much, WBZ appears to have walked all over the competition. Our AM drive is even more solidly #1...going from an 8.2 12+ in the fall book to an 8.9 this time. No station has done this well in mornings here in about 10 years :-) This comes amidst rumors that WHDH(AM) will switch to news from talk in AM and PM drive.

SEB1525@MVS.draper.com (Steve Bacher) writes:

>For nigh on a decade now I've been hearing about the President making
>speeches on the radio every Saturday. Clinton's doing it now, but I
>remember Bush and Reagan doing so as well.

>I hear about this only as a passing reference in a news item, but I've
>never been able to find out which station(s) carry these speeches.
>(Scott F., can you tell me if there's one here in Boston?)

Few stations carry the speeches live. Their value, really, is more
to set the news agenda for the weekend than to be broadcast live. I
think most news directors balk at automatically giving the president
half an hour of free airtime every weekend.

I don't know of any station that carries them live on a regular basis...
but anyone doing news on Saturday (like WBZ :-) will have immediate
excerpts after the speech.

Source record: 43705

HADDONFIELD, N.J. -DJ- Vacation Home Rentals, Worldwide, a New Jersey villa rental company, said it sued media personality Howard Stern for business interruption and lost profits resulting from Stern's broadcasting of the business' toll-free telephone number on his television show.

An attorney for Lori Gedon, the company's proprietor, said Gedon filed a lawsuit in New Jersey Superior Court seeking compensatory and punitive damages from Stern and WWOR-TV Inc., which produced the show, and the company that rebroadcast the show in syndication. WWOR-TV is a subsidiary of BHC Communications Inc. (BHC).

Officials at at BHC Communications and WWOR-TV declined to comment, except to say that they had not been served with papers in the case.

Vacation Home Rentals, Worldwide, said that in a skit satirizing Dr. Jack Kevorkian, the physician who has assisted terminally ill people in supervised suicides, Stern urged viewers to call 1-800-MD-DEATH for advice on how to commit suicide. The company uses the toll-free number 1-800-NEED-A-VILLA, the same number Stern broadcast.

Gedon said she received thousands of calls for Stern after the broadcast, disrupting her business.

Stern's skit originally was broadcast in November 1991.

Gedon's attorney said in a press release that even after being notified of the problem, producers of Stern's show rebroadcast the show in reruns throughout the country.

> My research ended at 1932, so I cannot report what happened to WBBR
>after that date. Perhaps someone else can pick up on the thread of this
>long-forgotten station and call letters.

I posted on this when Bloomberg took the WBBR calls. WBBR stayed sharetime with WEVD on 1300 up till WW2 or thereabouts. It was licensed to the Watchtower Bible and Tract Society, which I believe is better known to us as the Jehovas' Witnesses.

WBBR died sometime around 1941. I have a listing for it in 1939, but not in 1946. So what happened to 1330? WEVD had it all to itself for another 35 years or so, adding WEVD-FM 97.9 in the 50s. WEVD abandoned the AM in 1977, and the AM became WNYM/WPOW. Those were consolidated under Radio Vision Cristiana last year, and the station became noncommercial WWRV, with a Spanish-language religious format. It's still on 1330 with an awful signal.

WEVD-FM stayed on 97.9 until 1988, when it traded the FM for Spanish Broadcasting System's WUKQ 1050 (formerly WHN - WFAN). 1050 became WEVD, 97.9 WSKQ-FM...and so it stands today.

Suppose the current WBBR knows anything about the call letters' history? Naaahhhhhh...

Word from friend in the know is that the fulltimers at Eagle 106, Malrite's one time (one book, after WCAU dropped the format) #1 top 40 station is dying at the end of this week. The fulltimers have been given notice. Recently "the best mix" Eagle 106 was more Hot AC (no rap, no metal, but all the same dance records as usual at night) than top 40 anyway, and was supposedly being beaten by Rock AC Star 104, dance-urban Q102, etc.

Tape is rolling.

## 272. Introduction To r.r.b and Internet Radio Journal (periodic posting)

Newsgroup: rec.radio.broadcasting
Date: 1993-02-27 06:14:48 UTC
From: rrb@airwaves.chi.il.us
Message-ID: <1993Feb27.061448.3731@gagme.chi.il.us>
Source record: 43710

Greetings readers of rec.radio.broadcasting.

Here is a brief synopsis of what rec.radio.broadcasting is about.

Basically, rec.radio.broadcasting (r.r.b) is dedicated to just what
the name implies, radio broadcasting. It differs from
rec.radio.shortwave in that we concentrate more on 'domestic'
broadcasting than on international (i.e shortwave).

By domestic, we mean broadcasts which are intended, primarily,for
reception in the same country/nation in which they originate. R.r.b
is an international newsgroup, though, and the term 'domestic'
should not be taken to imply 'USA' or even North American. Readers
in other nations are encouraged to participate.

********** Appropriate Subject Matter **********

Subjects which are appropriate are many. Basically, if it has to do
with broadcast radio, and not _specifically_ international
shortwave, it is welcome here. Occasionally an article which IS
primarily about shortwave will be posted if the subject seems broad
enough that the readership of r.r.b might be interested, or be able
to assist the poster in some way. We do not encourage articles
pertaining to television, except for the occasional article pertaining to
technical or engineering matters, and/or dealing with the
reception/transmission of the actual signal. Articles regarding
the 'content' or 'production' of television, are usually not posted.

Generally, if a subject 'seems' like it would be of interest to the
broadcasting community (which includes those involved in creating,
transmitting or listening to broadcast radio) will be published.
These subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters and interests.
3) DXing (long distance reception) on the standard broadcast bands
or (in rare cases) television bands.
4) Community broadcasting (including non-commercial or utility stations).
5) Pirate broadcasting (especially non-shortwave, domestic pirates).
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.
9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.

13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

****************************** Moderation ********************************

R.r.b is a _very_ loosely moderated group. Basically, the only articles which don't get through are ...

* Articles which are not on (or reasonably near) the stated charter and scope of the group (domestic radio broadcasting).

* Articles pertaining to 'non-broadcast' radio services, such as cellular, two-way, ham, citzens-band, and such.

* Articles that are too long for submission as-is. If your article is longer than 10k (10,000 bytes), consider splitting it into two parts, or better yet, edit it down to a more reasonable size. Check to see if you can eliminate any quoted text. If you believe that your article is of an especially urgent or inforamative nature, and you also feel that you cannot reduce the size without damaging the content, let me know and I will try to work with you.

* Articles which are merely multiple repetitions of an identical answer which has already been offered several times. Often these will be bundled together into a single article to conserve bandwidth and increase readability.

* Articles which contain 'miles' of quoted and multiple quoted text followed by a few lines or less of original text. Please edit quoted text to a minimum and try to adhere to the *50% rule*, that is 51 (or more) percent of original text to 49 (or less) of quoted text. If the thread is old, (not current) more quoted text is appropriate. Only the worst offenders are omited, usually I will edit quoted text myself, when I have time. If you feel the need to offer one or two sentence replies, consider e-mail. Conversely, if your e-mail reply contains information of potential interest to others in the group, consider posting it AS WELL as mailing it to the original poster. We can all benefit from good information.

* Articles which are unwarrantedly offensive, abusive or contentious for the sake of contention. Personal attacks and ridicule are considered such. Discussion, even argument, of issues and opinions are welcomed and encouraged. Flame-wars and such are not. We have discussions here, not shouting matches.

********** If your article is rejected for publication **********

If your article *is* rejected, you will be notified via e-mail with a form letter explaining why the article was rejected. If you post an article, and DO NOT receive such a reply, AND do not see your article posted within a few

days after sending it, please notify me via e-mail. Include your article, if you can with that letter. Occasionally e-mail and news software gets goofy, and an article gets lost. If you DO resend, be sure to mark your article as a 'repost'. Do not assume that your article was rejected, unless you receive a notification.

********** Internet Radio Journal: **********

R.r.b is also available in a digest form via e-mail. This is called the "Internet Radio Journal". If you, or a friend, does not get Usenet (or does not get rec.* groups) please feel free to subscribe to the Journal by sending mail to the Internet address of - journal@airwaves.chi.il.us -. The Journal is also available for 'bursting'or local distribution within a non-Usenet system. If you run such a system, and it is non-commercial (privately owned boards which are either free or charge a nominal 'cover' fee) you are welcome to receive the Journal for distribution within their system.

********** ARCHIVES **********

The Internet Radio Journal is archived at an Internet site called 'deja-vu.aiss.uiuc.edu' and is available there for anonymous FTP. Digests are stored in compressed form. Older issues are stored two or three to a flie and newer ones are stored one to a file. They are labled by issue number. There is a file containing all of the article names and in which issue they are found. That file is called 'INDEX' (All upper case) and it is not compressed. The directory in which these digests are located is '/misc/rec.radio.b-cast'. Please send all comments about rhe r.r.b archives to me, wdp@airwaves.chi.il.us. Send any comments about the FTP site (if they are nor specific to THIS group) to C Lance Moxley (clm@uiuc.edu) the system administrator.

I am open to suggestions on how to improve this group. Send them via e-mail to wdp@airwaves.chi.il.us. Feel encouraged to post. The group is only as good as its contributors. I would like to extend a special invitation to the engineering and programming folks among us. I would love to see more technical postings. This is an area where I feel r.r.b could use some more input, but that's just me :-). The group is yours and what you make of it, that it will be.

Thanks to all who have, and continue to, participate.

We now return you to your regularly scheduled newsgroup :-).

William Pfeiffer

## 273. Informal digest of alt.radio.pirate available

Newsgroup: rec.radio.broadcasting
Date: 1993-02-28 04:15:11 UTC
From: wdp@gagme.chi.il.us
Message-ID: <1993Feb28.041511.18472@gagme.chi.il.us>
Source record: 43711

As some of you are aware, I have been sending out a small informal digest containing the articles from the newsgroup alt.radio.pirate, to a few people who have an interest in such things, but cannot get the group through Usenet.

If anyone else would like to be added to the list, send mail to wdp@gagme.chi.il.us with the words 'add pirate' in the subject header. Do not reply to this article through your news reader, you must reply directly via e-mail in the form stated above.

Note: I will continue to do this as long as it does not become a hassle. I cannot, at this time, support posting via the pirate digest, only reading. If anyone wants to offer me a simple way to automate an e-mail to news gate that will operate on a uucp-connected machine and requires NO intervention on my part other than setting it up, I will consider installing it, especially if it is real small and simple. E-mail me if you can assist in this regard.

Also, I cannot promise that I will catch EVERY article in alt.radio.pirate. It is a relatively low traffic group and sometines by the time I make a digest, some of the articles have already expired. Any help automating this process will be appreciated as well. Currently I have a script that puts the thing together from news spools, much like the script that creates the Internet Radio Journal, but any improvements are much appreciated.

So knowing all of that, feel; free to add yourself to the list. Again, send e-mail with the words 'add pirate' in the subject header and send to wdp@gagme.chi.il.us.

Take care

## 274. Re: Strobe Aircraft Warning Lights

Newsgroup: rec.radio.broadcasting
Date: 1993-02-28 04:15:33 UTC
From: hhallika@tuba.calpoly.edu
Message-ID: <1993Feb28.041533.18485@gagme.chi.il.us>
Source record: 43712

The question arose about a station that seems to use
high intensity strobe tower lighting at some times and red obstruction
lights at others. From FCC 17.38:

Note: When authorized by the Commission, high intensity white
obstruction lighting will be used in lieu of obstruction marking and
lighting specified in 17.23 through 17.37.
...
Where a dual lighting system is employed, ie, high intensity
white obstruction lighting during daylight and red obstruction lighting
at night,...

So, it appears the station is using high intensity lighting
during the day so the tower need not be painted, then using red lights
at night (when the paint would not be visible). I'm not sure why they
did not go to high intensity at all times, unless the neighbors
complained.

Harold

## 275. Re: Detatchable Penis song, what are the rules?

Newsgroup: rec.radio.broadcasting
Date: 1993-02-28 04:16:15 UTC
From: weaver@sfc.sony.com
Message-ID: <1993Feb28.041615.18541@gagme.chi.il.us>
Source record: 43713

When we received the King Missile "Detachable Penis" single, our folks
played it to utter death (twice per show is considered playing to death).

When our playlist (and those of other stations playing it) hit the trades
(Gavin, Rockpool, CMJ), the commercial
Modern Crock station nearby started playing it similarly.

None of us have had any complaints from listeners, let alone from the FCC.
Go figure.

## 276. Re: Detachable Penis

Newsgroup: rec.radio.broadcasting
Date: 1993-02-28 04:16:22 UTC
From: WEOS-FM <BLACK%HWS1%HWS.bitnet@CUNYVM.CUNY.EDU>
Message-ID: <1993Feb28.041622.18523@gagme.chi.il.us>
Source record: 43714

A few comments were made about the use of the word Penis. The FCC has
affirmed the use of technical usage of the "correct" names of sexual
organs. However, under their narrow and most of the time indecipherable
defintion, If Howard talks about cutting off someone's Penis and making
Penis Pie out of it, that would probably be actionable. The D.P. song
would be actionable outside of safe harbor, according to FCC staffers,
IF A VALID COMPLAINT were offered. The Fcc does not have the time or staff
to listen all the time to every station. However, they can and probably will
act on valid complaints. I have heard that one of the grass roots efforts in
ROchester against the station that has picked up Howard, in addition to an
advertiser boycott, is to tape the show and flood the FCC with taped
complaints.
To put this in perspective, even NPR has had the FCC investigate indecency
complaints on All Things Considerd! So it can happen on any type of program,
not just Howard Stern or music, if people continue to want to force their views
on others, rather than just switch the dial. I am no fan of Howard Stern, but
I
do respect "legit" use of the guarantee of freedom of speech. Whether or not
Howie's show can be classified as such is another discussion.

Does anyone know what the regulations are in France, or more specifically what one would have to do in order to obtain a licence to broadcast? I am thinking along the lines of an English speaking service in a Ski resort (ie a very small transmitter).

Also, I understand that any radio station in France must have a certain amount of French ownership - is this right?

Thanks.

## 278. Re: Need info on FCC obscenity regulations

Newsgroup: rec.radio.broadcasting
Date: 1993-02-28 04:21:13 UTC
From: madison@wam.umd.edu
Message-ID: <1993Feb28.042113.18737@gagme.chi.il.us>
Source record: 43716

Excerpt From: jewel@uclink.berkeley.edu (The Talking Mule)

:[...] (Most likely, there should be no problem since the FCC doesn't
:take too much time monitoring a 500-watt college radio station, right?)

Don't be so sure. At our last meeting, our General Manager brought
to our attention two cases (I think one was in Boston somewhere)
in which 100-watt college stations were fined $1000 for obscenities.
Apparently, from what I understand, the fine is $10-watt. But the
point is, they DO watch.

:Oh yeah, with the "safe harbor" hours, I should really have no problems
:with obscenities anyway, right? Or am I interpreting it wrong?

From what I gather, 12am to 6am (or is it 5am?) are 'immune' to
obscenity-based fines. WMUC-FM College Park plays a disclaimer
at about 15-20 minute intervals throughout Safe Harbor hours.
What the contents of this disclaimer are or whether it is an FCC
requirement, you'll have to wait for a reply from someone who knows!

:Thank you...
:
:The Talking Mule

You're quite welcome. Hope I had SOME answers.

# 279. SAFE HARBOR

Newsgroup: rec.radio.broadcasting
Date: 1993-02-28 04:21:58 UTC
From: WEOS-FM <BLACK%HWS1%HWS.bitnet@CUNYVM.CUNY.EDU>
Message-ID: <1993Feb28.042158.18765@gagme.chi.il.us>
Source record: 43717

Current FCC rules are technically safe harbor is midnight to 6am, except for non-commercial stations that sign off at midnight, are allowed a safe harbor from 10PM to midnight. HOWEVER, THIS NEW FCC RULE WAS STAYED by the US Court of Appeals, waiting for oral arguments in the case, which are not yet scheduled.

So, Safe harbor is legally 8PM to 6AM. THis is safe harbor for indecent language usage. The usage you described, would be actionable by the FCC, if played outside safe harbor, words like "fuck, shit, and any others that the FCC defines as patently offensive descriptions of sexual or excretory organs or functions as defined by contemporay Community (NOTE THE FCC's defining this) Standards. Your own area, has no bearing on what "community standards" are, as the FCC is setting these up.

Your statement on the FCC not monitoring a 500 watt station is wrong. You haven't heard about the $23,750 fine levied against 420 watt WSUC in Cortland.

If a valid complaint or the FCC monitors you, you could face action. Good luck with your show. If it is after 8PM (at the moment) you will not have a problem, but keep your ears posted to what the courts and the FCC is going to do. FCC interim FCC chief Quello has stated no change in the FCC's enforcement policy, stating that both the Gores are anti-indecency. Remember that the FCC's definition of Obscenity is prohibited all the time, but it takes a pretty gross broadcast to be Obscene. IBS, NACB, and the FCC has some stuff on what is or isn't obscene and indecent.

# 280. State Employee Coalition Says Radio Campaign Effective

Newsgroup: rec.radio.broadcasting
Date: 1993-02-28 05:41:47 UTC
From: ndallen@r-node.hub.org
Message-ID: <1993Feb28.054147.19909@gagme.chi.il.us>
Source record: 43718

Here is a press release from the Virginia Alliance of State Employees

State Employee Coalition Says Radio Campaign Effective
To: State and City Desk
Contact: David Antle of the Virginia Alliance of State Employees,
804-648-1700

RICHMOND, Va., Feb. 25 -- As the final hour of the state legislative session draw near, the Virginia Alliance of State Employees (VASE) says its $13,000 radio ad campaign was effective in influencing legislators to consider a fair pay raise for state employees.
VASE purchased time for a 60-second ad that ran the week of Feb. 22 on 22 radio stations statewide. The last day of the legislature is Feb. 27.
The ad lauded both the Senate and Delegates' Assembly for proposing significant funds for state employee pay raises, but criticized each house for planning to "divide the money between merit pay for some and a small, across-the-board raise for all."
"State employees endured a pay freeze for three years," said VASE Director David Antle. "Now that money is finally available, they should all receive a fair raise, which would be an across- the-board raise."
State employees took their message to the airwaves as the deadline approached for legislators to vote on the Commonwealth's budget bill, which includes the state employee pay raise.
Station WRVA in Richmond refused to run the ad -- the only radio station of those approached in Virginia to do so. According to WRVA sales representative Ken Wayland, the station did not approve of the ad's "issue." VASE told WRVA that it was censoring the content of the ad by refusing all reasonable accomodations that VASE was willing to make, including having the station tag its disclaimer onto the ad.
VASE spent more than $13,000 to produce the spot and air it on radio stations in Richmond, Petersburg, Norfolk, Virginia Beach, Staunton, Harrisonburg, Charlottesville, Buckingham, Bluefield, Crewe and South Hill.

From the 1993 Radio World Annual directory, try

Sennheiser Electronic Corp.
6 Vista Drive
P.O. Box 987
Old Lyme, CT 06371

phone +1 203 434 9190
fax +1 203 434 1759

They also make nice microphones. Most broadcast supply houses probably carry their products.

Harold

>Does Arbitron rate non-commercial stations?

Yes, they do. At least, I know that WBAI 99.5mHz FM in NYC gets Arbitron ratings, and their non-commercial Pacifica.

>If not, doesn't that skew the numbers for the commercial stations?

Perhaps. I don't know that they necessarily get relative/scaled ratings--perhaps just estimated-#-of-people-watching -type ratings?

> it's been missing". Indeed, at 1305 Wednesday programming began with
> an R.E.M. song.

Ah, reminds me of The End in Cleveland... 24 straight hours of the song "It's the End of the World As We Know It." before finally switching formats. "IT'S THE END OF RADIO AS YOU KNOW IT!" "Yeah, 'cause if they don't stop playing this damn song, I'm going to start banging this radio against a wall." :-P

> Despite (their) claims to the contrary, this is no WXRT (93.1 Radio
> Chicago, a serious music station). I have little or no problem with
> the music they play (Elvis Costello, Roxy Music, U2, Peter Gabriel,
> Matthew Sweet, Timbuk 3), although they do go a bit overboard with
> Pearl Jam/Nirvana. The problem is in THE WAY it is presented.

Basically, I feel this way about WENZ. The music is great. The playlist (at least in terms of playing the same songs every day) and the general packaging of the product are (still) that of a CHR station, which it was before May '92. Exceptions: From about 11:30 PM to 5:30 AM (start of the morning show), they advertise 60 minutes of commercial free music in a row... but between those blocks of music, there are generally no commercials! Maybe one or two, but more often just a PSA or station promo, then they go to another 60-minute block. I work 3rd shifts quite often, and I like this...

To their credit, I have spoken with a number of people at The End, and they all seem *extremely* enthusiastic and dedicated to providing the listener with good stuff. And they are very receptive and responsive. Which is why, after not having any promotional materials from a Cleveland radio station for quite a while, I now have an End bumper sticker sitting in the rear window of my car.

Here's an anecdote that says a lot about the station. I recently visited a friend at Allegheny College in Meadville, PA and was surprised to be able to get The End in this town which is two hours east of Cleveland.

Well, my car stereo has an excellent tuner (I can pull in Toledo's WIOT-FM and Detroit's WRIF-FM quite often, and Toledo is two hours away and Detroit is three and a half) but I was even more surprised to hear that half of the kids in Allegheny's dorms listen to and really like the station... apparently, the signal comes in strong over only about half the campus, otherwise I believe that even more of the students there would listen...

anyhow, enough kissing up to The End :) There are other stations in Ohio which do a better job of approximating college radio, which is what I think the modern-rock format tries to do. Cincinnati's 97X is fantastic, but it's an anomaly... it *is* a college station (licensed to Miami University of Ohio), albeit one that plays commercials (and it is commercially successful - it has a pretty strong listenership all over SW Ohio). There is one station in Ohio that isn't a college station that does a good job of approximating one... and I'm not completely sure that it isn't a college station :) and that would be 101 Radio Columbus... WWCD-FM 101.1, licensed in Grove City (a Columbus suburb). No announcer and very few interruptions by the DJ's, and lots of great songs that you can simply *not* hear anywhere else (even on some of the college stations). I heard the Waterboys on the radio for the first time ever while listening to 101... they have more of an 'alternative' playlist than some of the new modern-rock stations do.

(I would like to find out who owns this station... perhaps someone who has the appropriate information could pass it along to me...)

> Is their an unwritten law that professional radio announcers have to
> have idiotic fifth grade nicknames like `Mud in the Morning'? (I'm not
> kidding about this one - apparently he came from Baltimore; I'm ready
> to send him back) Perhaps half of the chit-chat this morning was of
> the `this radio station is SO COOL!!' variety.

All the End jocks use their own names, including Brian and Joe, the morning guys. (OK, all except Stone Blue. I don't believe that's his real name. :) And generally there has not been a problem like "Gee, this is a cool station, let's talk about it for hours."

> Also, they've already begun the inane `40 minutes of commercial free
> rock 'n roll' promos. Yeccch.

so what? All commercial radio stations play about the same amount of music every hour. With ads, a necessary evil, you can only fit so much into sixty minutes of programming. Look at it this way. The End plays 45-minute blocks during the day. Another Cleveland station advertises 20 songs in a row, and says "Want a commercial? You'll have to wait another hour and a half." Well, an hour and a half of straight music averages out to 45 minutes per hour. Who'da thunk it? :)

I ignore things like that.

>Also, what of the slogan "The Point"? I
> think we've been Point/Edge/Blade/End -ed to death (see Cleveland,

> Dallas, Las Vegas, Seattle, etc.). How about being real original and
> calling it "KPNT"? Anyway I could go on and on . . .

Again, nit-picking. I could care less if a station called itself "A
Group of Insane Ranting Air Personalities" as long as the programming is
what I like.

> Some suggestions, for KPNT and any other stations who care:
>
> * No contests, please. Just give me good music, not time-wasting,
> insulting gimmicks.

Hey, I like contests. But then, I've won stuff before. :)

> * How about live ads only? They give the listener the feeling
> someone is there with them, not that they're being subjected
> to some corporate, packaged, targeted `product'.

Yeah, but will the advertisers go along with that?

> * Eliminate playlists - shoot from the hip. Pretend you're
> over at a friend's house and trying to turn him/her on to
> some artists you really like.

This would be a terrific idea, if there were any commercial stations out
there that had the guts to do it.

> * How about some real variety? A Sunday night blues show;
> in-studio interviews and even performances by local and
> touring artists; BBC news every night at 6:00; Dr.
> Demento (if your market doesn't have it), etc.

I would like to see a return to pre-TV radio. Maybe one or two stations
that play a *diverse* mix of programming. You don't have to have all the
stations in a market doing that, just one or two... I would be
interested in whether it would sink or float...

> * Don't live and die by the book. Go for the long term, a solid,
> loyal listener base from which to grow.

Again, no one has the guts.

> * No fast talking, standup comic-wannabe DJs. Just knowledgeable,
> truly interesting announcers not ashamed to use their real
> name.

The End does seem to have DJ's who actually know and like the music they
play. As for personality, how much personality can come out when the
DJ's are not really allowed to talk much?

> Does anybody know of any commercial rock stations like this? I realize
> what I've been describing is more like a college station, but why
> don't commercial rock stations treat their listeners like adults?

There are no *commercial* stations exactly like this, no.

Some come close. (A few.)

## 284. Re: Adult commercial rock stations?

Newsgroup: rec.radio.broadcasting
Date: 1993-03-01 19:50:37 UTC
From: jwg@acd4.acd.com
Message-ID: <1993Mar1.195037.27176@gagme.chi.il.us>
Source record: 43722

TISS: :HIGGINS" <higgins%tiss.decnet@mdcgwy.mdc.com> sez about The Point
in Saint Louis:
(Much deleted)
.Is their an unwritten law that professional radio announcers have to
.have idiotic fifth grade nicknames like `Mud in the Morning'? (I'm not
.kidding about this one - apparently he came from Baltimore; I'm ready
.to send him back) Perhaps half of the chit-chat this morning was of
.the `this radio station is SO COOL!!' variety.

Give these guys a little room at first. The jocks are probably VERY excited
about their new station. It *is* hard to hold back. If they don't calm
down after a couple weeks, *then* you can start to gag.

Also, about the idiotic jock names, I agree. Up in Indy, WRZX 103.3 FM
treats us to "Slammin' Sam" and "Rockin' Rich". I'd be embarrassed to be
called something like that. Matter of fact, I can't bring myself to be
anything but "Jim Grey", my real name, on the air. Lucky my real name is
simple.

. * No contests, please. Just give me good music, not time-wasting,
. insulting gimmicks.

Contests are supposed to be fun, whether you participate or not. Rock stations
tend to do contests as part of the "lifestyle" thing -- the station wants you
to identify it with a lifestyle, preferably one you live, or aspire to. So
if the contests seem like a waste of time, or are insulting, then the station
isn't doing them right. When done well, contests should at worst be brief
annoying interruptions to the music.

. * How about live ads only? They give the listener the feeling
. someone is there with them, not that they're being subjected
. to some corporate, packaged, targeted `product'.

Boy, you want that jock to run his voice dry, don't you! During an average
hour at most any station, count on five to fifteen spots. At 30 seconds
each, that's anywhere from 2.5 to 7.5 minutes. With three spot sets per
hour, I could be talking to you for 2.5 minutes at a stretch. YOU WOULD
TUNE OUT. "When is this guy ever going to shut up?" With professionally
produced spots, there's variety in voices, and the hope is they're fun enough
you'll stay tuned. In the end, I'd rather hear 2.5 minutes of produced
spots than 2.5 minutes of a guy reading.

. * Eliminate playlists - shoot from the hip. Pretend you're
. over at a friend's house and trying to turn him/her on to
. some artists you really like.

What? Why, gasp, you're actually asking the jocks to ... dare I say it ... KNOW SOMETHING ABOUT THE MUSIC! Geez, some people.

If the rock station I work for let me program my four hour shift, I'd drift so badly... I used to do free-format radio, and it took me a damn long time to be any good at it. Even the best free-format radio tends to serve the jock more than the listener. Every station has a focus, and a good way to maintain that focus is to have playlists. (I prefer, however, the old clock system where you play a red song, than a blue song, then a green song, and the jock gets to pick.)

. * How about some real variety? A Sunday night blues show;
. in-studio interviews and even performances by local and
. touring artists; BBC news every night at 6:00; Dr.

Not in a niche format like "The Point", you don't.

. * Don't live and die by the book. Go for the long term, a solid,
. loyal listener base from which to grow.

Unfortunately, the advertisers pay you by the book. If the book is bad enough, the advertisers go away. Radio is a bu$ine$$ first. To do what you ask is a large gamble. When successful, it pays handsomely. But it's very, very hard to get to that point.

. * No fast talking, standup comic-wannabe DJs. Just knowledgeable,
. truly interesting announcers not ashamed to use their real
. name.

I hear you, brother. I don't mind occasional attempts at humor, but on a current-oriented station, I'd rather hear dirt on the artists, tour dates, who's in the studio, etc.

Oh, and about using the real name: Even though I just work part time, some idiot listeners got my number from the phone book and left a slew of mild prank messages on my machine. Gotta get an unlisted number! But this is a big reason for name changes. Also, some of the real-sounding names are fake as well. Easy ones are going by your first and middle names (I'd be Jim Wilson) or (for married women) using the maiden name.

Boy! I've rambled! Sorry, but these very basic, very important complaints about current radio formats do get my motor running, because while I understand the reasoning behind things, I don't always like what comes out of my speakers.

Peace,
jim grey

## 286. Freedom of speech -was: Detachable Penis

Newsgroup: rec.radio.broadcasting
Date: 1993-03-01 19:51:04 UTC
From: john@zygot.ati.com
Message-ID: <1993Mar1.195104.27235@gagme.chi.il.us>
Source record: 43724

WEOS-FM <BLACK%HWS1%HWS.bitnet@CUNYVM.CUNY.EDU> writes:

> I am no fan of Howard Stern, but I do respect "legit" use of the
> guarantee of freedom of speech. Whether or not
> Howie's show can be classified as such is another discussion.

Would it not be great if Freedom of Speech was just exactly that:
freedom of speech? Get rid of the qualifiers, the conditions, the
considerations, and all the other baggage and mechanisms to justify
denying someone somewhere HIS freedom of speech.

The FCC's job would sure be easier if it could just let the marketplace
and the court of public opinion operate freely. What is an
"illegitimate use" of the guarantee of freedom of speech? Something
that is "offensive"? Everything that can be said will offend someone,
somewhere. Does it involve numbers of people offended? If so, what is
that number? Does it matter WHO is offended? If so, just who is to be
protected? Protected from what? Is the expression of "subversive" ideas
prohibited? Is only "political speech" protected, as some have
insisted? If so, how is this expressed in the Constitution?

To say that there is "freedom of speech--except for..." is on the face
of it patently absurd. To apply a different standard to broadcast as
opposed to print media is equally silly. And the silliest thing of all
is that the standards appear to be made up as we go along. The FCC has
levied a record forfeiture against Infinity for "violation" of rules
that have not even been spelled out. Our society is papered thick with
explicit laws, and yet there is not so much as a paragraph defining
what is considered "obscene", except for some vague references to
descriptions of "excretory functions" and some such.

Speech, regardless of how untrue, inflammatory, disgusting, vile, or
shocking it may be has never and cannot hurt anyone. And one always has
the right to not read or not listen to anything. Anything that can be
said on the radio can be put into print. No one would dream of
censoring a printed publication, so what makes the airwaves a
legitimate target? The old saw of "limited channels" is pretty hollow
in 1993 with stations going dark. And you certainly cannot "dumb down"
a society in the name of "protecting the children".

Or can you?

[Moderator's Note: C'mon John, wake up and smell the fascism, will ya?
Of course you can. <grin>. Bill]

> Could someone please tell me what are the main FM stations in San
> Salvador, El Salvador? I would especially appreciate it if someone could
> also tell me the formats and frequencies. Thanks.

If I remember there are about 40 stations (AM & FM) that can be
received in San Salvador. These include the formerly clandestine
stations Radio Venceremos and Radio Farabundo Marti, which
used to belong to the Farabundo Marti National Liberation
Front, and Radio Cuzcatlan, a better-funded station belonging
to the Salvadorean military.

I have a list of frequencies etc. at my office and I could fax
it to you if you send a fax number to one of the email
addresses below.

Contests -- and I'm speaking from a listener's point of view, not a
jock's -- Contests reward listeners for listening. (Some listeners,
that is.) They can be taken too far and made completely gimmicky just
like other aspects of radio.

## 291. Tower maintenance issues - questions from a layman

Newsgroup: rec.radio.broadcasting
Date: 1993-03-05 04:07:57 UTC
From: rkd@pt.com
Message-ID: <1993Mar5.040757.6236@gagme.chi.il.us>
Source record: 43729

When visiting Boston (MA) a few years ago, I stayed in a hotel that was situated in the top of a knoll, next to a few abandoned tower sites, and one active monster of a tower.

Having no life (and the weather was nice), I meandered in and around the area, pondering what people have to do to maintain this tower. I estimated this stick at around 1100' tall, and it appeared to have three UHF broadcast antennas on the top (sort of tri-candelabra style), and a few FM bays (I think that's what they are called, bear with me, I don't work in the trade), stuck on the side. Every once in a while up the tower was a open mesh "floor" and a tower light.

I who doesn't like heights, feeling uneasy simply looking straight up at this thing, wondered:

- How does one climb this beast, open ladder, how long does it take, do you start out _very_ early in the morning, how do you haul stuff up/down (that length of rope would be pretty heavy, maybe with a capstan), do you work from floor to floor, looks like a real bitch ...

- Do tower lights have multiple bulbs / fixtures / what? Shades of, "sorry honey, be back tomorrow, gotta change the bulb"

- I assume there are "professional tower climbers" (with HARD feat and tight shorts) that one can bribe into climbing out to work on those side mounted FM bays (up at 600'), and how on earth do they reach the lights on the top of those UHF antenna sticks?

- If someone's up the tower, do you have to off-air the close frequency transmitters along with the principal one, for example, I would assume that you could get quite a RF burn if working on one of the adjacent UHF antennas?

There were other questions too, such as, has any one ever took the quick way down, via one of the guy wires (with a pulley/brake perhaps).

[Moderator's Note: Great questions, Ray, now who has the answers? Please post them for all of us to read. Bill]

From: argent@iastate.edu
Message-ID: <1993Mar5.041123.6434@gagme.chi.il.us>
Source record: 43731

I'm highly interested in a radio program the (to my knowledge) was broadcast on NPR up to about a year ago. It is called "Joe Frank, Work in Progress," I believe. I would be very interested in getting a complete catalouge of this if anyone knows where it is sold. Can I get it from NPR? Thanks to anyone who helps.

[Moderator's Note: There was a big thread on this subject recently. I don't remember the details but the upshot is that the show went out of production. Pity, I never heard it and wonder what it was like. A lot of folks liked it.Bill]

## 294. New number for Toronto broadcaster's BBS

Newsgroup: rec.radio.broadcasting
Date: 1993-03-05 04:11:36 UTC
From: Nigel Allen <nigel.allen@canrem.com>
Message-ID: <1993Mar5.041136.6457@gagme.chi.il.us>
Source record: 43732

Iain J. Grant, a Toronto broadcaster, runs a BBS that has been through various name changes, but is now called "Biff's Bar n' Grill". The new number is (416) 222-8162.

A somewhat more serious BBS with file and message areas dealing with broadcasting, telecommunications and transportation policy is the Super Continental BBS in Toronto at (416) 398-6720. David Leibold is the sysop.

## 295. The World Trade Ctr. explosion and broadcasting

Newsgroup: rec.radio.broadcasting
Date: 1993-03-05 04:12:04 UTC
From: fybush@world.std.com
Message-ID: <1993Mar5.041204.6493@gagme.chi.il.us>
Source record: 43733

With the help of the Associated Press, Newsday, The New York Times, Broadcasting&Cable magazine (now with editorial content on the cover :-), and Paul Richards of Lincroft NJ, I've managed to put together most of what happened to FM and TV on the World Trade Ctr. last Friday:

FM was largely unaffected. Many NYC FMs have construction permits to move to the WTC, but almost all are still on the Empire State Building. WYNY 103.5, WNYC 93.9, WQCD 101.9, and WKCR 89.9 were taken off the air. WYNY returned from a mono backup; all four were back on late at night from the WTC.

TV was more seriously hit:

2 WCBS, 4 WNBC, 5 WNYW, 7 WABC, 9 WWOR, 11 WPIX, 13 WNET all transmit from the ESB. 2 was able to come back right away from a backup on the ESB. The others were off the air most of Friday. 4 used WLIW (21) on Long Island to broadcast its programs. 13 used WNYE (25) for its. 11 used a low-power TV station on ch. 17 to reach some of its audience. 7 used the New Jersey Network's WNJM (50) and home shopping's WHSE (68) Newark NJ and WHSI (67) Smithtown LI. 5 and 9 were apparently off the air altogether. All the stations have separate links to some cable companies and managed to stay on cable in NYC that way.

I could make a comment here about the importance of AM in a situation like this...but the whole thing is far too depressing to joke about, IMHO.

Scott Fybush -- fybush@world.std.com

## 296. Successful College Radio (was Re: Adult rock stations?)

How many really successful commercial college stations are there out there? I'm with 99Rock WFRD-FM Hanover, NH, and we are a very successful station. In last years ratings we were the number 1 station in the Upper Connetticut River Valley. (About 27% of the market of around 100,000) We're an AOR station and now the local CHR station (50,000 watt) has switched over to AOR because they finished fourth in the ratings.

Any other great success stories out there?

## 297. East European FM Startup????

Newsgroup: rec.radio.broadcasting
Date: 1993-03-05 04:16:20 UTC
From: karlb@csd4.csd.uwm.edu
Message-ID: <1993Mar5.041620.6645@gagme.chi.il.us>
Source record: 43736

Hello Netters,

A short time ago there was a discussion on the basic equipment required for starting an FM station in Eastern Europe. At the time there were some very good posts on the subject.

Unfortunately, I did not capture them, and now a friend has need of this information. This person is hosting some folks from Poland who wish to start an FM in Poland, with a 35-70 Km radius over flat terrain.

So, If they could benefit from your wisdom, either E-mail me, or post the information on the basic equipment needed for startup. I have TV experience, but do not know the ins and outs of FM station layout.

Thanks,

Karl Buschhaus

## 299. Indecency Safe Harbor

Newsgroup: rec.radio.broadcasting
Date: 1993-03-05 04:17:13 UTC
From: "adm28q1@nauvm.ucc.nau.edu" <ADM28Q1@NAUVM.UCC.NAU.EDU>
Message-ID: <1993Mar5.041713.6716@gagme.chi.il.us>
Source record: 43738

Much has been written recently about when indecent material can/cannot be broadcast. The FCC has set up "windows" in which such material can be placed on the public airwaves. Yesterday, I received a letter from our Washington attorneys, informing us, and the rest of their broadcast clients that "The U.S. Court of Appeals for the District of Columbia Circuit has stayed the effectiveness of a new FCC rule which would have permitted the broadcasting of "indecent" progrmming by most stations only between midnight and 6 a.m. etc..." After reading this I was struck by the thought that we seem to be missing a major point. I know social standards, morals etc. have changed over the years, but broadcasters still are in a position to provide a standard for the rest of the country to follow. It used to be against the rules to use words like "damn" or "hell" on the radio. (Just listen to some of the shows from the '40's and you'll hear none of that.) Why is it so important nowadays to be able to air material that's indecent? What has happened to social values; to broadcasters' responsibility to provide programming that can be enjoyed by anyone? Why do we feel it necessary to have "safe harbors" during which time we can fill the air with garbage? Maybe I'm an old prude, but I don't see any need for it. There are far better ways to use a license, a transmitter, an opportunity to serve my listeners.

[Moderator's Note: Russ, let me first say that I am not a 'fan' as such of so-called indecency. That means that the likes of Howers Stern hold no particular interest for me. But as John Higdon so succinctly put it recently (and I DON'T ,quote)... Why should the electronic media be held to standards that pring media is not? I am sure that there are many things that one could site as being different now than in the forties. In fact one would be harder pressed to find things that are the same. I agree to a large extent that we are, in some ways, worse off for some of the changes, but to disapprove and to dislike changes will not keep things from changing. In the forties, language was a lot tighter. Now adays, grammer schoolers know more about virtually everything from computers to profanity than many adults. I know 7 year-olds who could embarass a sailor. So to long for a return to the censored radio days of the forties and to oppose the equalization of the playing field between print and broadcast media is to my way of thinking to slap freedom of speech in the face. Like Mr Higdon said, so-called profane words cannot hurt anyone. Perhaps they can insult your sensibilities or make you mad, but nobody's life has ever been ruined by the use of the 'Seven Dirty Words'. I, and John, both challenge anyone to prove otherwise.

Russ Hamnett, Manager, KNAU, Flagstaff AZ

## 300. WKOX AM Framingham MA to simulcast

Newsgroup: rec.radio.broadcasting
Date: 1993-03-05 04:17:25 UTC
From: fybush@world.std.com
Message-ID: <1993Mar5.041725.6735@gagme.chi.il.us>
Source record: 43737

Starting Monday 1 March, WKOX (AM) 1200 Framingham MA will begin simulcasting co-owned WCLB (FM) 105.7 Framingham-Boston's country format daily 9AM-5:30AM. Until now, WKOX has had a talk format (mostly satellite from Daynet and other small networks), and before that it was satellite oldies.

While the morning show will stay local, it strikes me as rather a waste of a 10/1 kw station that is the only major AM in the profitable MetroWest market outside Boston, not to mention putting a respectable daytime signal into the entire Boston market. And this while Larry King and other top talkers go unclaimed in the Boston metro... :-(

WKOX, for what it's worth, is where this news guy first went on commercial air, so I'm a bit more sad than I might normally be...

Scott Fybush -- fybush@world.std.com

## 301. Need Info on Sports Network

Newsgroup: rec.radio.broadcasting

Source record: 43739

I was wondering if anyone had a listing of the stations across the country for two radio sports networks.

1. Sports and Entertainment Network - This network features a pro wrestling program on Saturday nights which originates from KVEG in Las Vegas.

2. The ESPN Sports Radio Network.

Are there listing available for these two networks? If so I would like copies of them.

Well, they're at it again, those happy marketeers at the Speedy
Gonzales School of the Rapid Language Learning. Now they've got the female
supine before the male announcer, something about stepping on his toe.
But, according to my contacts deep within the Speedy Gonzales organization,
you haven't seen anything yet!

The market analysts have determined that they've pretty
well saturated the market for yuppies who want to
learn Spanish, and they're ready to mount a new campaign.

Here's a sample script:
=====

Male Voice: Hi, where 'ya been?

Female Voice: Well, I guess it's OK to tell you.

Male Voice: Tell me what?

Female Voice: It's my friend Vincent.

Male Voice: Who?

Female Voice: Vincent, you know Vincent!

Male Voice: Oh, Vincent!

Female Voice: Yeah, Vincent. He's a little down on his luck.

Male Voice: He's what?

Female Voice: Down on his luck, broke, tapped out,
strapped for cash, you know?

Male Voice: So where've you been?

Female Voice: I took Vincent to the pawn shop to see if he could raise
a little cash.

Male Voice: Do what?

Female Voice: Get some cash, you know? Hock something.

Male Voice: Oh. What did he pawn?

Female Voice: His ring, he had this real nice signet ring
that he pawned.

Male Voice: He did what with the ring? What happened?

Female Voice: What are you today, deaf? In hock! Signet! Vincent!

Male Voice: There you go, you just nearly spoke Latin!

Female Voice: I did?

Male Voice: Sure! "In hoc signo vinces" means "in this sign shalt thou conquer." It's something people who know Latin say to each other all the time.

Female Voice: Woah! I never knew it was so much fun to know Latin! Tell me some more!

Male Voice: OK. You remember your friend Gloria?

Female Voice: Oh sure. Gloria. She rides the bus to work.

Male Voice: Right. She rides the bus to work and what happens every week?

Female Voice: She gets motion sickness on the first day of the week when she rides on the public transit system. Transit makes her sick.

Male Voice: The first day of the week?

Female Voice: Right, on Monday.

Male Voice: Monday?

Female Voice: Yes, Sick! Transit! Gloria! Monday!

Male Voice: There, you just nearly spoke Latin again!

Female Voice: Really?

Male Voice: Sure, "Sic transit gloria mundi" means "thus passes the glory of the world." It's something else that people who know Latin say to each other every day.

Female Voice: Say, you got a patent on this or something?

Male Voice: Sure do! The Speedy Gonzalez School of the Rapid Language Learning has a patented method to teach just about any obscure language to equally obscure people. Order the complete Nearly Latin set today and receive, at no extra charge, a copy of "Dominic! Go Frisk 'Em" and other light-hearted stories from the wonderful world of Latin.

Female Voice: Woah!

>who helps.

Joe Frank's "Work in Progress" was an excellent (if uneven)
Peabody-Award-winning radio experimental/drama/avant-garde/whatever
program produced by KCRW in Santa Monica up until about 2 years ago.
It was broadcast only in reruns up until December 1992, when it ceased
production. Joe Frank is variously reported to be vacationing in
Florida, working on a book or film of his work, or just on hiatus.
The possibility of his return to NPR is held out, but nobody really
knows yet.

A complete (well, almost complete) list of Joe Frank programs
available on cassette (at $11.00 a tape) is available from KCRW.
Here's the address to write to:

KCRW-FM
1900 Pico Blvd.
Santa Monica, CA 90405

ATTN: Joe Frank
c/o Ariana

You may get quicker results if you phone the station at (310) 450-5183.

There are also a few people who have made tapes of the show off the
radio (standard caveats apply as to tape quality). If you are
interested on contacting them, drop me a private email note.

Is there a big email bottleneck somewhere or has everyone
gone to radio heaven? The 8 articles you see here came in over the course of
the past week. Normally if this number came in in one day, it would be a
slow news day.

So either the mail has broken down somewhere or you folks are slacking off
on the job :-). If you have posted anything in the past week and have not
seen it in the group by now, re-send. If not... Get off your broadcasting
stools and post, already! We are counting on you.

Otherwise you will be subjected to a fate worse than Muzak! If there is such
a thing :-))).

A list I have shows WOXY, 97.7, licensed to Balogh Broadcasting,
not Miami University. I remember hearing from a different source that
it's not affiliated with the university, also, though they do
broadcast some Miami U. sports.

This same list shows WMUB, 88.5, licensed to Miami University.

I agree that 97X is a great station. I'm a loyal listener myself.

>jock's -- Contests reward listeners for listening. (Some listeners,
>that is.) They can be taken too far and made completely gimmicky just
>like other aspects of radio.

Last week, WZZQ Terre Haute's morning show was broadcasting live from Hardee's. The jocks, Scott and Debbie, had a pair of tickets to give away to the Bon Jovi show in Indianapolis for the following Saturday night. The contest was this: The person who came in and did the silliest or craziest thing on the air got the tickets. Scott and Debbie were expecting silly costumes, goldfish swallowing, that kind of thing.

Well, a local high school student took things a little too seriously. While the morning show was on the air, he burst into the restaurant, wearing boxer shorts and a trench coat -- and a shotgun. He announced a holdup, had the workers come out into the dining area, and then asked Scott and Debbie whether he won the tickets or not.

Meanwhile, a worker in the drive-thru window had called the police, who arrived with their guns drawn. The young man did not win the tickets, but did get a ride downtown to jail.

The shotgun turned out to be unloaded, by the way.

Does anyone know what the story is on WVBFs call and program status change? It strikes me odd to see a popular morning team, and the passing of a talented Christian Paul and now a country sound. It seems that VBF has been experimenting with talent and format for awhile now.

Just curious,

Jay_Appell\@cac.stratus.com

## 309. Boston Radio Group breaks down

Newsgroup: rec.radio.broadcasting
Date: 1993-03-10 22:46:38 UTC
From: fybush@world.std.com
Message-ID: <1993Mar10.224638.5747@gagme.chi.il.us>
Source record: 43747

Well, Boston was _supposed_ to be the Duopoly Capital of the Western World, anyway. It all started last fall with the announcement of the Boston Radio Group, which was to be created by the merger of Pyramid Broadcasting (WXKS-AM / WXKS"Kiss"-FM) and Atlantic Ventures (WRKO-AM/WBMX-FM and the newly-acquired WHDH-AM).

The BRG deal inspired Granum (WBOS-FM) to buy WSSH-FM...and Greater Media (WMEX-AM/WMJX-FM) to buy WCDJ-FM...and Infinity (WBCN-FM) to buy WZLX-FM...and so on. Only one problem...it was never completed, and now it's fallen through. Apparently the Pyramid people were never able to get quite the financial terms they wanted, and they carried the big ratings and the clout in the deal. And now the deal is off, probably for good.

This opens some possibilities...including WRKO/WHDH?WBMX picking up another FM...and WXKS-AM-FM picking up another station, or being picked up by another station (WBZ????).

Meanwhile WHDH revamped its drivetime programming Monday morning 3/8. Morning drive, formerly hosted by talkers Marjorie Clapprood and Pat Whitley, is now the purview of TV talk host Eileen Prose. The morning show is supposed to be the radio equivalent of "CBS This Morning" (oh, do they mean it's supposed to be the third-rated show ;-). PM drive is now money talk and news. WHDH now has the CBS affiliation, and is running CBS top-of-the-hour news (but cutting away, sometimes in mid-story (!) for "Traffic on the 1's".) The NBCRadio affiliation goes to former CBS affil WRKO.

Onec I get some sleep, I'll post on my weekend visit to New York, and "What I Saw on My Trip to ABC Radio and WINS."

CZECHIA: 5930 is now broadcasting the new program "Radiojournal" (ex-Ceskoslovensky). Relay of 270 and 1233 kHz. BE via DIS

ESTONIA: Radio Tallinn's DX-program has mentioned the following stations, addresses and phone numbers: R Tartu, 1566 kHz: Riia 12, 2400 Tartu. Tel. 234-77700. R V|ru, 1332 kHz: Liiva 11, 2710 V|ru. Tel. 241-21661. Levi R, 711/810 kHz: Torni 1, 3300 Kuressaare. Tel. 245-56108. P{rnu R, 711/1332 kHz: 3600 P{rnu. Tel. 244-4835. Mulgi R, 1602 kHz: 2900 Viljandi. Tel. 232-43210. BE via ARC

The new right-wing coalition government of Estonia has set up a controversial council with full control over broadcasting. The nine-member council will have the power to award and withdraw frequencies and licenses to television and radio stations. Broadcast via MET via BDXC via ARC

1512 ER P3 is rebroadcasting R Sweden's program in Estonian 1530-1545. BE via ARC

The Ostankino television company has reached agreement with the Estonian authorities on relaying the Russian channel to Estonia. Ostankino has agreed to pay all relaying expenses. The Russian television company and the St. Petersburg television company have not as yet come to Estonia for talks. Estonian Radio via BBCMS via SCDX

GERMANY: 1143 AFN Bremerhaven is going to close down on March 31st, 1993. JVH, EJH

1044 DT64, MDR's program for young people, has reduced the power to 150 kW (ex 250 kW). MDR via BE via ARC

The people shaping the budget for the new Clinton administration in the United States want to close Radio Free Europe and Radio Liberty. They say the stations have done their jobs, and their USD 210 million a budget is needed elsewhere.

It's been proposed RL/RFE merge with the Voice of America, which would take over their facilities, but not their budget. The two stations broadcast in 23 languages spoken in Eastern Europe and the former Soviet Union, most also carried by the Voice of America. The proposal, which would have to be passed by Congress, does call, however, for USD 30 million to set up a new Radio Free China. The Economist via SCDX

ITALY: AWR Forli schedule as from 1st December: In English at 0730-0800 on 7210 kHz and 1030-1100 on 7230 kHz. In French at 0930-1000 (Sat/Sun), 1230-1300 (Sat/Sun) on 7230 kHz. In German at 0900-0930 and 1200-1230 on 7230 kHz. In Italian at 0800-0900 on 7210 kHz and 1100-1200 on 7230 kHz. In Spanish at 1000-1030 (Sat/Sun), 1300-1330 (Sat/Sun) on 7230 kHz. Dale Vanderpoel via Shortwave Paradise BBS via InterNet

KALININGRAD: Address for "Dlya tekh kto v more" (Sun 0000-0030) using 1386 kHz: GTRK "Yantar", ul.Klinicheskaya 19, 236016 Kaliningrad Obl., Russia. Confirms power of 2500 kW. TL via ARC

LITHUANIA: 1458 Radiocentras heard in Sweden with excellent signal until 1900 when closing down. BE via ARC

LUXEMBURG: 1440 has been off several night due to transmitter problems. BE via ARC, OA via ARC

MALTA: Vo the Mediterranean can be heard in English from 0600-0700 on 1557 and 9765 kHz, and again from 1400-1500 on 11925 kHz. Dale Vanderpoel via Shortwave Paradise BBS via InterNet

NETHERLANDS: Radio 1 747 kHz transmitter will be leased to a commercial company. Price tag US$ 3 million annually. Truck drivers in Holland protests as reception on MW is very good for talk programs. MN via BE via ARC

Also 675 and 1251 kHz can be hired by interested organizations. MN via BE via ARC

ROMANIA: 1179 Bacau 1 has decreased power to 20 kW. BE via ARC

756 R Romania International has a separete service for listeners in Southeast Europe 1700-2200 daily (no English). BDXC via ARC

RUSSIA: R Art is now also on 1413 kHz. QTH is Moscow. Schedule: 04-07 and 15-18. SWN

R Galaxy is back: 2000-2100 UTC using 9880 kHz with lots of English IDs. Dale Vanderpoel via Shortwave Paradise BBS via InterNet

AWR via transmitters in Russia: 0430-0500 in English, 0500-0530 in German and 1600-1630 in English on 15125 kHz (Samara), 1400-1500 in Italian on 9775 kHz (Moscow), 1900-1930 in German on 7310 kHz (Ekaterinburg). Dale Vanderpoel via Shortwave Paradise BBS via InterNet

Gene Scott via Radio Moscow: 15315 kHz (Novosibirsk) from 0400 broadcasting to China, India, Australia and New Zealand and on 21845 kHz (Samara) from 0400 broadcasting to India, China and Central Asia. Dale Vanderpoel via Shortwave Paradise BBS via InterNet

1116 Europa Plus, Moscow is broadcasting daily 0300-0100. GCR via BDXC via ARC

1206 Echo Moscow now broadcasts 24h daily in Russian. The DX program "Moscow Calling" has been closed down by the chief editor. GCR via BDXC via ARC

1440 R Centre, Moscow broadcasts daily in Russian at 0358-0500 and 1359-1500. A DX program is planned at 2100 on Saturdays by the ex-editors of "Moscow Calling." GCR via BDXC via ARC

R Centre started June 3rd, 1992 with 7.5 kW. DXer Andrei V. Nekrasov is Editor in Chief. Address: Central Government of Radio Networks, R St. Centre, Nikolskaya Str. 7, Moskva 103012. Tel. +90-007-9211 689. Fax: +90-007-9211 624. Transmitter is located in Oktyabrskor Pole, Moscow. Station is owned by "Radio for Everybody" with director

Aleksander Panteleyev. From January 1st new alternative frequency 1044 kHz with 10 kW and 12075 and 5900-5990 kHz (not fixed yet) with 20 kW. From February 1993 station has used new transmitter site in Balashikha. Nekrasov via Play-DX via DIS

1539 R Delovaya Volna at 0700-1700 and R Vostochnaya Tribuna at 1700-1800. Both in Russian. GCR via BDXC via ARC

SLOVAKIA: The new schedule, beginning April 1st, from Slovak Radio's external service is as follows: 0930 in English on 7345, 9505, and 11990 kHz; 1300 in Slovak on 6055 kHz; 1730 in Russian on 5960, 7345, and 9605 kHz; 1830 in English on 7345 kHz; 1900 in German on 5960 and 9605 kHz; 1930 in French on 5960, 7345, and 9605 kHz; 0000 in English (to the Americas) on 5930 and 9580 kHz, and 0100 in French (to the Americas) on 5930, 9810, and 11990 kHz. BBCMS via SCDX

The Hungarian language service of BBC World Service has been heard on Slovak radio, even some BBC WS Slovak language programs are used. BBCMS via ARC

UNITED KINGDOM: Virgin 1215 is now testing on 1215 kHz with music plus announcements as follows: "This is an engineering test transmission for Virgin 1215, the new national independent radio network, which launches officially on April 30th 1993. Virgin 1215 will be a 24 hour service playing the very best album rock and pop from the past 25 years. For more information on this new national network write to Virgin 1215, 1 Golden Square, London W1R 4DJ. From April 30th much more music on Virgin 1215." Derek Cooper

1170 Signal Gold is the new name for Signal Radio. Broadcast via Communication via DIS

YUGOSLAVIA: 1557 R Yugoslavia, heard in English at 1800. Horst Rauch via ARC

Best 73s!

## 311. Ramsey FM-10 information...

Newsgroup: rec.radio.broadcasting
Date: 1993-03-10 22:47:11 UTC
From: Julian Lorkin <one-tx-short-of-a-radio-station@vnet.ibm.com>
Message-ID: <1993Mar10.224711.5802@gagme.chi.il.us>
Source record: 43500

Sorry to send this to R.R.B, but I have been totally unable to post
to A.R.P, or the FM-10 list, and nothing seems to work - perhaps someone
could cross-post for me if they are feeling really helpful? Thanks!

I seem to be the only person in the UK who has managed to import some
elements of the Ramsey FM-10 kit - namely the vital BA1404 ICs. Alas,
thats pretty much all I have other than a very hazy photocopy of the
Rohm datasheets with an 'Application Example' - I guess this is very similar
to the Ramsey kit.
With a bit of luck and guesswork I've managed to get the stereo encoder
working quite stably, but with the RF section I've come up against a
problem.
What are the coils? I've tried standard RF 5mm ferite 'pink' core coils,
but got nowhere. Just a description of the appearance of the coils would
be wonderful! Technical details would be superb.
Can anyone help a slightly lost British radio phreak?

Thanks!
Julian

[Moderator's Note: Your article has been posted to alt.radio.pirate. I am
close to offering posting via the alt.radio.pirate journal. I will announce
it to subscribers of that list and this, when it is to be done. If you would
like to receive the 'READ ONLY' digest of alt.radio.pirate, and understand
that I make no guarantees that it will be comprehensive, timely or complete;
send e-mail with the words 'add pirate' in the subject to wdp@gagme.chi.il.us.
Don't send to the 'airwaves' address. Thanks. Bill]

>missing a major point. I know social standards, morals etc. have changed over
>the years, but broadcasters still are in a position to provide a standard for
>the rest of the country to follow.
[...]

The issue should not be whether "indecency" is good or bad, but rather
if the government should have the authority to make ban it. There is
much speech in the world that I consider bad, but that doesn't mean
that I want the government to censor it.

Censorship of "indecency" is especially bad because the FCC does not
define it clearly. You only know for sure something is indecent if you
broadcast it, have someone tape it and then send a complaint to the
FCC, the FCC determines that it is indecent.

Note that your local newspaper is under no similar legal obligation to
be decent. And yet, you probably don't worry about indeceny in the
paper.

Having done some of this stuff during college to make some extra $$$ when
Francisco Tower was in town...yeah, you start out early in the morning,
but it probably only takes about a half hour or so to climb the 1K'.
Usually, you have a belt with the tools, and use a canvas bucket to haul
up the connectors, ash and trash, etc. it is a real bitch...
>
>- Do tower lights have multiple bulbs / fixtures / what? Shades
> of, "sorry honey, be back tomorrow, gotta change the bulb"

No, usually one bulb to a lens. BIG sucker, about 3x the size of a
mogul-base lamp for the home. There are fcc and faa regs concerning how
many have to be on (all of them, or tell us type of drill...) and how
long you can go without changing it (you current types may interject
here...).

>
>- I assume there are "professional tower climbers" (with HARD

> do they reach the lights on the top of those UHF antenna sticks?

Nah, you just never look down, and the view can be gorgeous....the pay is
good. Usually, you just continue to climb up the stick...

>
>- If someone's up the tower, do you have to off-air the close
> frequency transmitters along with the principal one, for
> example, I would assume that you could get quite a RF burn if
> working on one of the adjacent UHF antennas?

Wanna see some rf burns? (not badges of honor, mind you...but all
engineers get one or two sooner or later. It is a good idea to shut down
or go to reduced power when people are climbing around your antenna
array. Just good practice, like not climbing when there is a thunder
storm in the area (:-)) And, if you are going to disassemble the array,
you have to shut down anyway...
>
>There were other questions too, such as, has any one ever took the quick

The SuperRadio II went out of production almost a year ago.
The only way to find one is to spot a leftover or (in the case of
Thompson's employee order line) a refurb.

>gifts. I wasn't even intending to open them but thought I should see if
>they were as weak on FM as the one I opened. Well, THEY'RE NOT--
>they're great on FM. I was able to get the distant channels of

I've found it a worthwhile modification to the Superadio II to replace the stock ceramic bandwidth filter (230 kHz? 280?) with a narrow filter 150 kHz wide. It doesn't improve sensitivity, but it does wonders for selectivity. For instance, with the 150 in, I can now receive WXPN-FM in Philadelphia, 88.5, (not *well*, but well enough) right next to local powerhouse WBGO-FM in Newark on 88.3.

I got my filter from a friend, along with some articles in the hobby press from a couple of years ago. The source I have listed for 150 kHz ceramic filters operating at an IF of 10.7 MHz is:

Hosfelt Electronics, Inc.
2700 Sunset Blvd.
Steubenville, OH 43952
(800) 524-6464
Part # 27-109, $1

I understand there's a minimum purchase, but I don't know what it is, since I didn't get mine there. I'm lucky if I grab the correct end of the soldering pencil, but I installed mine this past weekend. I installed a Radio Shack IC socket in place of the old filter (8-pin wire wrap, cut in half and with one pin removed, then cut off the excess wire), then plugged the new filter into the socket.

The filter is a little tough to get to; it's on the second PC board under the dial. It basically involves disassembling the entire radio, more or less. It's right next to a "square metal box-shaped thing" as my friend with the filters put it (yes, I'm electrically incompetent).

Things to beware of:

1. Don't break the power switch. It's a bear to put back together correctly.

2. Make sure you remove the tuning dial from the outside before you
open the radio. Despite the radio's best efforts to fool you
into thinking that it doesn't come loose, it does.

3. Don't mess with the dial cord. If it comes loose, it's a pain
to get back on, if you can figure out how it goes.

Of course, you shouldn't infer from this that any of this happened
to me.... :-)

# 316. AM/FM DXing Information (periodic posting)

Newsgroup: rec.radio.broadcasting
Date: 1993-03-11 06:50:59 UTC
From: fybush@world.std.com
Message-ID: <1993Mar11.065059.12482@gagme.chi.il.us>
Source record: 43504

Introduction to AM/FM DXing

By Scott Fybush and Earl Higgins

One of the easiest parts of the radio spectrum to explore are the broadcast bands. This posting will attempt to offer some hints to make your exploration of the mediumwave and VHF-FM bands more enjoyable.

I. WHAT ARE THE AM/FM BROADCAST BANDS?

The mediumwave (commonly referred to as AM) broadcast band currently extends from 525 to 1605 kilohertz. Channels are spaced in even 10 kHz increments; i.e.: 530, 540, 550, ... , 1600 kHz in the United States and Canada. Elsewhere, channels are spaced in 9 kHz increments, i.e.: 531, 540, 549, etc.

In the United States, the band is being expanded to 1700 kHz. Stations which are currently experiencing high levels of interference will begin appearing on the 1610-1700 kHz frequencies sometime in late 1993 or 1994. They will simulcast the new frequencies with the old for a period of a few years, eventually dropping the `old' frequency. This opening up of new channels presents some once-in a lifetime opportunities for the alert mediumwave DXer.

The VHF-FM broadcast band in the United States extends from 88 to 108 megahertz. Channels are assigned at 200 kHz increments; i.e.: 88.1, 88.3, 88.5, ... , 107.9. The channels from 88.1 to 91.9 are reserved for noncommercial educational stations. Outside the United States and Canada, the boundaries and channel spacing vary. In Japan, the band starts at 76 MHz. In Western Europe, the band generally runs from 88-108 MHz, but channels can be irregularly spaced, i.e.: 101.25 MHz.

II. SIGNAL PROPAGATION

The distant stations you are able to receive will depend largely upon signal propagation. This varies depending upon the time of day, the season, and other factors. For mediumwave, the single most important factor for good DX is the time of day. Mediumwave signals almost always get absorbed by the D Layer of the ionosphere during daylight hours. As a result, all mediumwave signals received during midday hours will arrive by ground wave, making reception of signals over a few hundred km/miles away unusual in daylight. At night, however, the ionosphere reflects mediumwave signals, making it possible for signals to be heard at much greater distances, up to a few thousand km/miles, via `skywave'. To a lesser extent, the period up to two hours after local sunrise, and two hours before local sunset, called "Critical Hours", have varying levels of skywave, and also can provide some very unusual reception

opportunities for the mediumwave DXer. Reception also tends to be better in winter than in summer, due to lower levels of atmospheric noise and longer hours of darkness. In the United States, due to the large number of stations, many smaller mediumwave stations are required to sign off or reduce power sharply at sunset so as to reduce interference to distant stations.

Whereas the mediumwave band can be counted on to provide distant reception with much dependability, this is not the case at all on the VHF-FM band. Under `normal' conditions, VHF-FM signals generally carry no more than 150-250 km (100-150 miles), or `line of sight', since the ionosphere generally does not reflect VHF-FM signals. VHF-FM transmitting antennas are thus usually located as high as possible. Tall towers, high buildings, and mountaintops are common VHF-FM transmitter sites.

However, under certain rare conditions, the atmosphere will even reflect VHF-FM signals, thus making it possible to receive these stations at quite long distances. There are two major forms this distant reception can take; the most common is Tropospheric Ducting, or tropo for short. Typically, this occurs when a warm air mass forms on top of a cooler mass closer to the ground. The area between these masses acts like a pipe, `bending' the signals back to the earth well beyond the horizon. This reception is most common in local late spring and summer months, in the post-sunrise hours. It will enable the alert VHF-FM DXer to log stations up to 800 km (500 miles) away in optimum conditions.

The other relatively widespread form of VHF-FM DX is called Sporadic E, or E-skip, because it is the E Layer of the ionosphere which reflects the signals. Like the name implies, this form of propogation is very sporadic, yet very intense. When it's in, it is VERY strong. Stations from a relatively limited geographic area 1300-2000 km (800 to 1200 miles) away will suddenly boom in, strong, often in stereo but quite fadey, even overpowering semilocals in many cases. It will start at the bottom of the VHF-FM Band (actually TV channels 2-6 first) and work its way up in frequency. The highest frequency at which signals are reflected by the ionosphere is called the Maximum Usable Freqiuency (MUF), just as it is in shortwave, and it can occassionally surpass the top of the VHF-FM dial in an unusually good opening.

III. RECEIVERS

Almost any radio is capable of some broadcast-band DXing, especially long-distance mediumwave reception. However, most recent radios, even those designed for quality shortwave reception, do not have outstanding broadcast band reception. One exception is the General Electric Superadio III (Model 7-2887.) The SR III is designed for optimum AM/FM broadcast performance, incorporating:

* RF amplifiers on both bands
* Ceramic filters and Automatic Frequency Control on FM
* No PLLs or digital displays for less electronic noise

* A 2-way speaker system with 1 watt of audio power

The SR III is a bulky (4" x 10" x 12") portable radio which can be run off 120V AC or 6 "D" batteries, providing over 400 hours of battery life. This radio has become popular among the DX community for its exceptional performance.

It costs between thirty and sixty dollars in the US, and may be found at many discount outlets. It can be obtained from Bennett Brothers (Order #R8883) at 1-800-621-2626 or 1-800-631-3838, or from Best Products (Order # 140457) at 1-800-950-2398.

If you don't have a Superadio, some important things to seek out in a receiver are:

* External antenna connections. These make it easier to use a better antenna than the one supplied with the radio.

* High selectivity. This refers to the receiver's ability to reject strong signals on adjacent frequencies, and is more important to good reception than is sensitivity, since a good antenna will provide more-than-adequate signal strengths.

* Digital frequency display. While the circuitry involved can add to the level of internal electronic noise in the radio, digital display makes it possible to more easily determine what station is being heard.

IV. ANTENNAS

For mediumwave reception, most receivers have a short internal ferrite rod. This will provide acceptable signals for high-powered distant stations. Ferrite rods are quite directional, and the radio can thus be turned to null out strong interfering signals, or to improve reception of the desired signal.

For more advanced DXing, external antennas offer certain advantages. The most common external antenna is a simple random wire, 15m (50 feet) or more run out the window and then as high as possible (up in a tree, for example). The wire can be connected to the external antenna terminal. If none exists, you can open up the radio and wrap the wire a few turns around the ferrite rod inside. It is also possible, although less desirable, to simply wrap the wire around the entire radio. If the radio has a terminal marked "ground" or "GND," another wire can be run from this terminal to a copper rod driven a meter/a few feet into the earth.

One problem with a random wire antenna for mediumwave work is it's inability to reject strong local signals. Most receivers today lack the dynamic range to effectively deal with the extremely strong signals from a local mediumwave broadcaster as picked up by a random wire antenna. Thus, some sort of tuned antenna is best for all but the most isolated, rural locations.

The most popular antenna for mediumwave DX today is called a `loop' antenna, and can be either of two types: ferrite rod or air-core wound wire loop. These antennas are small, 25-100 cm (1-3 feet) in diameter, and sit on the DXers desk or shack table where they can be easily turned by hand for optimum peak or null of a signal. Each design works with a tuned circuit before feeding the signal into your receiver, and usually this circuit includes a small powered amplifier. Generally speaking, the longer the ferrite rod, or the larger the diameter of the aircore loop, (to a point), the sharper the null of the antenna. 45 to 55 cm (18 to 22 inches) would be optimum for a ferrite rod antenna.

Air-core loops need to be made by hand, as there are none on the market. Ferrite loops, however, are available commercially from at least two manufacturers; Palomar Engineers and Radio West. Unfortunately, these two antennas do not have very long ferrite elements; and reviews of their performance in the mediumwave press tends to be mixed. Ideally, one would build their own antenna, or try to find either a used, older Radio West loop or Space Magnet antenna, both pre-1980. Plans for building all sorts of mediumwave loop antennas are available through National Radio Club publications. The address is found later in this FAQ.

A more advanced antenna is the "beverage" antenna. This is a length of wire 300 m (1000 feet) or more, with extremely high gain and narrow-beam directional characteristics. It is usually, but not always, terminated at the far end with a 450 ohm resistor connected to a metal stake driven into the ground. It should be pointed in the direction of the desired station. The beverage antenna can, under good conditions, be used for transatlantic and transpacific DX.

For VHF-FM, the important factor is height. The higher one can place an antenna, the better reception will be. A multielement Yagi antenna, which can be found in Radio Shack or similar stores, will often produce excellent reception. Since a yagi is quite directional, the use of a rotor is essential for reception of stations in different directions.

V. WHAT'S OUT THERE TO LISTEN TO?

There are over 10,000 radio stations in the United States alone. It's important to have some idea of what to expect to hear. A good directory is important (see STATION LISTINGS below), but it's essential to know what the station information means.

For mediumwave, North American frequencies fall into three basic classes:

* CLEAR CHANNEL: These frequencies are 540, 640-780, 800-900, 940, 990-1140, 1160-1220, and 1500-1580 kHz. Clear channels are home to one or two 50,000 watt powerhouse signals which can be heard reliably in half the country or more. Other stations also occupy the clear channels, frequently using less than 1000 watts and very restrictive antenna patterns. In recent years, the US FCC has added many more low power stations to the clear channels, making reception of the big,

primary, stations more inteference prone than it once was, but providing excellent hunting for the serious mediumwave DXer. Also, the clear channels are the primary hunting area for Latin American DX due to the relatively small number of North American stations on them.

* LOCAL: These frequencies are 1230, 1240, 1340, 1400, 1450, and 1490 kHz, and are sometimes referred to as the 'graveyard' channels by DXers. Stations on local channels can use a maximum of 1000 watts (somewhat higher outside the US). At night, these six frequencies tend to become chaotic, as the hundred-plus stations on each channel cause each other tremendous interference. Although the primary service area of these stations may be twenty miles or less, these stations have been known to reach well over a thousand miles under good conditions. Identifying distant stations on these channels requires a directional antenna, a good ear, and plenty of patience. The National Radio Club keeps distance records for all of the stations on these channels and publishes them in their bulletin, _DX_News_, regularly.

* REGIONAL: These are all the remaining channels, including the expanded band frequencies of 1610-1700 kHz. U.S. stations on these frequencies tend to be restricted to 5000 watts, although a recently signed international treaty allows for the possibility of 10,000 or even 50,000 watt stations on these frequencies if they do not interfere with other stations. In practice, only Canada has yet assigned high power stations on these frequencies. While not as noisy as the locals, reception on regional channels can be quite interference prone, with a listener able to identify three or four stations coming in simultaneously on one frequency. Most regional, or class III stations, use directional antennas to reduce interference with distant stations.

On VHF-FM, the American FCC has reduced its restrictions on power and antenna height considerably. Today, VHF-FM stations are allowed up to 50,000 watts from a 150 meter antenna in the Northeast and California; 100,000 watts from a 610 meter antenna elsewhere. Many stations, however, serve much smaller areas. These "Class A" stations use only 6000 watts or less. They were formerly restricted to just the following frequencies: 92.1, 92.7, 93.5, 94.3, 95.3, 95.9, 96.7, 97.7, 98.3, 99.3, 100.1, 100.9, 101.7, 102.3, 103.1, 103.9, 104.9, 105.5, 106.3, and 107.1 MHz. While the FCC no longer restricts class A stations to those frequencies, most are still found there. Likewise, only a few of the high-power stations are found on the old class A channels. For stations with extemely high antenna, the FCC mandates that transmitter power be reduced proportionately; thus a station with only 430 watts from a 220 meter antenna will reach about as far as a 3000 watt signal from the usual 91 meter antenna will.

VI. TIPS FOR BEGINNING

The most important element for beginning DXers is to get to know the dial. Spend a few hours scanning up and down the dial both during the day and at night. At night, many of the clear-channel 50kw stations, particularly the non-directional ones, should be easy to hear. Learn

all the local stations. Find out which ones sign off at sunset, which ones go off late at night, and which stay on all night. This will affect which distant stations can be received. If you have a local station on all night, you shouldn't expect to hear another station on that frequency without some tedious nulling. Experiment with radio placement. As you slowly turn the radio, observe its directional characteristics. The Superadio III will receive signals coming from the front and back of the set the best, and attenuate the signals coming in `off the side' of the set. You can use this to your advantage and log several stations on a single frequency.

By all means, keep a log of all new stations you hear; someday you'll be glad you did! Better yet, keep it on the computer; that way you can share it with others on the net. After a few months of listening; you should have a list of 200-300 stations you've heard. Most of these will be your `regulars', audible almost daily. Beyond that, you can hunt for the rarer stuff. Try for all 50 US states (very, very difficult), or 20 countries (fairly easy in most locations). Within a few years, you'll likely have heard a thousand or so stations and have a very interesting logbook. Here's a `beginner's target list' of widely heard clear channel AM stations to start you out; from most locations in North America you should be able to hear all but four or five of these fairly easily.

540 CBK Canada SA Watrous 840 WHAS USA KY Louisville
540 XEWA Mexico SL Rio Verde 850 KOA USA CO Denver
640 KFI USA CA Los Angeles 860 CJBC Canada ON Toronto

820 WBAP USA TX Fort Worth 1210 WOGL USA PA Philadelphia
830 WCCO USA MN Minneapolis

VII. SOME ADVANCED IDEAS

Once you've mastered the basics, here are some suggestions for areas of specialty DX:

* QSLing: Since broadcasters by and large don't use the "Q-codes" so popular in Ham and shortwave DX, QSLs are called `veries' or verification letters by mediumwave and VHF-FM DXers. You'll probably

have to send a letter to the station's chief engineer (names of actual verification signers can be found in the NRC AM Log). Expect verification in card form from the 50kw AM stations, and verification letters from just about everybody else. Small stations are often excited to find out they've been heard thousands of miles away, but you'll need to take special care to explain to them exactly what you want as they are likely to not know what a `verie' is. Also, remember to always include return postage with your request.

* DX Tests. A few stations still run special DX tests, usually arranged for either The NRC or The IRCA (International Radio Club of America) and published in advance in their respective bulletins (another reason to join!). In the past year alone, the following outstanding feats were accomplished via DX Tests: Hawaii (KUAI-720) was heard as far away as Ontario and Pennsylvania; New Jersey (via WJIC-1510) made it west of the Mississippi; and New Mexico (KHAC-880) made it to the East Coast! These are all fairly difficult states for most DXers (unless, of course, you happen to live in or near them).

* Equipment Tests: Some stations run experimental tests with their daytime power after local midnight, in accordance with US FCC and Canadian CRTC rules. Often these will be late Sunday night/Monday morning, when some stations sign off for maintenance (although not as many as used to do so). For example, in Chicago Illinois, many DXers have logged KOMO-1000 from Seattle Washington, testing when Chicago local WLUP goes off on Monday mornings; thankfully Monday mornings just happen to be the time when KOMO seems to like to test with their non-directional day pattern. This makes an otherwise almost impossible state relatively easy around the midwestern US.

* Sunrise/sunset DXing. Lots of interesting mediumwave DX can be had when your receiving station and/or the transmitter are in only partial darkness. It's possible to hear distant daytime-only stations this way. This requires a lot of skill, since there may be only ten or fifteen minutes in which to try. In fact most mediumwave DXers log the greatest number of stations in the hour or two right around local sunset, especially in the Fall and Winter months. Don't be surprised if, say, tiny KOKB in Blackwell, Oklahoma blasts right through CBJ and other East Coast powerhouse stations on 1580, for a few minutes right around Blackwell sunset! Anything can happen in the turbulent sunset and sunrise hours.

* Transatlantic/Transpacific DX. Some DXers in North America specialize in trying to receive signals on the mediumwave band from across the ocean. This requires outstanding propagation characteristics and plenty of patience (a nice, quiet coastal location can yield some amazing results).

* FM Subcarriers and Stereo. VHF-FM stations are allowed to transmit separate programming on a subcarrier. This requires a special decoder (one source is Bruce Elving's FM Atlas; see address below.) FM stations use their SCA (Secondary Communications Authority) subcarriers for

transmitting data, background music, ethnic programming, and more. Some AM stations now transmit in stereo. With an AM stereo receiver, you can hear stereo signals from thousands of miles away.

* Meteor Scatter. The most masochistic of all VHF-FM DXers attempt to hear VHF-FM signals reflected from --yes, it's true-- meteors in the atmosphere. These DXers learn to identify stations on the basis of a few seconds' listening.

VIII. IDENTIFYING YOUR CATCH

Radio stations in the United States are required to identify with their full call letters and city of license once an hour, between 10 minutes before and 10 minutes after the top of the hour. Canadian stations are never required to identify, and many never use any identifier other than "Q107" or "Toronto's 590 AM." It's therefore important to use other clues:

* Time announcements. These can tell you at least what time zone a station is in. If there's only one or two stations on a frequency in a given time zone, this makes identification easier.

* Format. If you have a list of stations that includes formats, use it. That includes knowing what network a station uses, whether the station uses a satellite-delivered music format, what slogans the station might use, etc.

* Local color. You might be able to hear names of cities or streets or notable local personalities mentioned during commercials, newscasts, talk shows, or weather forecasts. If the announcer says, "Here's the weather for the beaches today...", the station you're hearing probably isn't in North Dakota (although note, interestingly, there IS a TOWN called Beach, North Dakota; go figure). Likewise, if the forecast is snow flurries and six degrees, you're probably not hearing Miami. These clues are among the most valuable.

IX. STATION LISTINGS

An essential tool for any DXer is a good station listing. This will help identify what's being received, as well as provide a way to contact the station being heard.

For North American AM stations, one essential tool is The NRC AM Radio Logbook, now in its 13th Edition. It includes day and night antenna and power information, format, hours of operation, address, verie signers, network affiliations, etc. Price is $19.95 for US, $20.95 for Canadian, three dollars cheaper for NRC Members. To order write NRC Publications, Box 164, Mannsville NY 13661-0164 USA. NRC also publishes FM and TV Logs. To become a member (highly recommended) and receive a year's worth of `DX News', send $24.00 for US, $25.00 for Canadian to: NRC Subscription Center, Box 118, Poquonock, CT 06064-0118 USA. All other countries, write for price information.

Another concise and inexpensive directory is the M Street Radio Directory, published annually. The M Street listing includes frequency, power, directionality, format, address, phone number, and other listings less important to DXing. M Street also is indexed by call letter order and by frequency. The M Street directory costs $29.95 + p/h. It can be purchased directly from M Street at 800-248-4242 or +1 212 473 4668 voice, or +1 212 473 4626 fax. The address is M Street Corp., 304 Park Ave S Floor 7, New York, NY 10010 USA.

Another guide for VHF-FM DXers is Bruce Elving's annual FM Atlas. This includes maps showing every VHF-FM transmitter in North America, plus listings by state and frequency indicating power, stereo status, format, subcarriers, and slogans. FM Atlas does not include addresses or phone numbers. It can be purchased directly from Bruce Elving, PO Box 336, Esko MN 55733-0336. It costs $10.95 + $1.05 p/h.

Another listing is the Broadcasting Yearbook (commercial stations only), which is available at some larger libraries. The Canadian Almanac and Directory includes call letters, frequency, and addresses for Canadian stations.

For listings outside North America, consult the World Radio TV handbook, published annually and available through your local bookstore or radio specialty mail order outlets such as the Radio Collection and CRB Publishing.

X. CONCLUSION

Broadcast band DXing is an exciting way to hear the sounds of cities and towns around the nation and even around the world. It doesn't require hundreds of dollars of expensive equipment or huge antennas on the roof. All it asks of the would-be DXer is time, patience, and knowledge. Have fun!

THANKS TO...

Bob Foxworth, Garret W. Gengler (antenna ideas), Bob Parnass, Paul Schleck (Superadio information), and Bruce Werner, along with anyone else I may have forgotten.

Those of you who've taken apart the SR-II, how do you
get the case off without breaking anything?

## 318. WJUX "jukebox radio" Fort Lee, NJ 103.1 40s 50s music

Newsgroup: rec.radio.broadcasting
Date: 1993-03-11 07:47:21 UTC
From: "wa2ise\\"@cbnewsb.cb.att.com
Message-ID: <1993Mar11.074721.14773@gagme.chi.il.us>
Source record: 43506

Found a new FM station at 103.1 MHz, WJUX. Plays music from the '40s
and non-rock 50s. A competitor to WQEW. Haven't heard any commercials
yet, but I haven't listened continiously over hours, though.
My father says the music is the smaller bands, "swing time" he said it's
called. He would like to hear more "big band" music, Guy Lumbardo (sp)
and such. Large bands of 40 or so people.

## 319. Radio shack FM broadcast 6 element directional antenna

Newsgroup: rec.radio.broadcasting
Date: 1993-03-11 07:47:42 UTC
From: "wa2ise\\"@cbnewsb.cb.att.com

Radio Shack 6 element directional FM broadcast antenna

A few years ago, I put up the above antenna to improve my reception af
a Long Island FM station, WDRE Garden City, NY 92.7MHz. My location
is Oradell, NJ, about 14 miles due north of the Empire State Building
in NYC. Which means that WDRE is nearly southeast of me.

Last week, we had a bad wind/rain storm (a nor'easter, similar to a mild
hurricane), and my antenna got blown off direction. Ended up pointing
about 10 degrees south of due east. reception was off about 10dB. Got
out the ladder and aimed it the way I had it before, about 25 degrees
south of east, and then was off 4 dB of the best reception I will describe
next. Looked at a map for my location, and Garden City (Assuming trans-
mitter is in the same town as their studio, risky assumption!) and then
tried 40 degrees south of east. And got the reference point of 0 dB for
the previous dB numbers. I figured out the numbers by using one of those
Kay electronics switchable attenuators and watching the signal strength
meter on the stereo radio to duplicate the readings I had with no
attenuation but antenna mispointings. Not rigorious, but should be
ballpark.

To make a table of the above "observations" of the rad shach FM antenna:

degrees away from pointing rigth on
dB loss
30 10
15 4
0 0

Went a bit further south, but signal started to drop off some, which
means I found maximum signal/direction setting of about 40 degrees
south of east. Also wanted to avoid picking up too much NYC stations
which then might overload my radio's front end.

All this aim and try made for about 10 ladder climbs.

Not sure why I had a non-optimal direction before the storm, probably
thought Garden City was out further east on Long Island making for
a direction more east. May have found a false peak before, some antennas
have patterns that vaguely look like petals on a flower.

[Moderator's Note: Robert, I have the bigger version of that antenna, a 16
element FM yagi and I invested in a rotor. What a help. My antenna is
extemely directional side to front, but less so front to back. In otherwords
I get a lot more rejection from the sides than the rear. I thought of
mounting a screen or a multiple reflector on the rear. Does anyone know if
this wouuld help the front-back ratio or would it screw it up worse? Please

respond if you know. Bill]

## 320. Seattle AOR News

Newsgroup: rec.radio.broadcasting
Date: 1993-03-15 06:20:12 UTC
From: "briang\\"@halcyon.com
Message-ID: <1993Mar15.062012.18723@gagme.chi.il.us>
Source record: 43510

Seattle AOR, KXRX, last friday terminated half of the morning team of Crow
and West. In a peculiar move, Gary Crow was notified
that KXRX would not be renewing his contract and would be making a change in
the morning slot. Speculation is that afternoon team,"Robin and Maynard"
would be moving(back)to mornings beginning April first. Mike West
supposedly will be staying on, moving to the afternoon show.
In a somewhat related action, Monday, the program director, Brew Michaels,
also exited the station, citing philosophical differences.

## 321. Changes at "The Eagle" and 'Double-99'

Newsgroup: rec.radio.broadcasting
Date: 1993-03-15 06:20:57 UTC
From: "R. Coryell & P. Richards" <"testnet!pr\\"@pegasus.att.com>
Message-ID: <1993Mar15.062057.18774@gagme.chi.il.us>
Source record: 43508

rcoryell\@well.sf.ca.us (Roger Coryell) writes:

WEGX Philly going "smooth Jazz". KDBK San Francisco fires entire
airstaff, again , as of 3/12.

**********

...and Paul Richards testnet!pr\@pegasus.att.com also comments:

(Follow up to posting of two weeks ago)

WEGX-106.1 "Eagle 106" Philadelphia dropped their morning show (the John
Lander/Patty Steele "Nut Hut" 2 weeks ago, with PD Brian Philips resigning).
But they continued with their Hot AC format until today.
Yesterday they started making announcements about a new station coming
at 1:06 pm Friday. (And "superstars of the 80's and 90's" WYXR Star 104
bought ads inviting listeners over)

Here is a list of the last songs aired on Eagle 106 and a description of
what was said after that:

Say It Isn't So
This used to be my Playground
It's the End of the World (as we know it)
Never Say Goodbye
The One I Love
It's so hard to say Goodbye
I Will Remember You

"Welcome to the birth of Philadelphia's newest radio station. WJJZ 106.1
FM. Smooth jazz. I'm Bernie Kimball, your midday host and we're proud
to present a music format that's never been showcased here before.
We invite current WEGX listeners to stay with us. We'll be playing great
music we know you'll enjoy. In our debut hour, you'll hear from Kenny G,
Sade, Yanni, Harry Connick Junior, and Richard Elliot. We call it smooth
jazz - a refreshing blend of contemporary jazz, new age, and today's most
exciting vocalists, like our premiere song from Basia, a New Day for You,
on WJJZ 106.1 FM."

Interestingly, it was six years ago today (2nd Friday in March; date
was the 13th) that Electric 106 became Eagle 106; they changed at 6pm
with Charlie Quinn announcing the "building a new radio station" approach.
(I have airchecks).

## 322. Internet Talk Radio - The full scoop -

Newsgroup: rec.radio.broadcasting
Date: 1993-03-15 06:21:13 UTC
From: carl@malamud.com
Message-ID: <1993Mar15.062113.18784@gagme.chi.il.us>
Source record: 43511

Internet Talk Radio
Carl Malamud (info@radio.com)

The following article is reprinted with permission from ConneXions. ConneXions is published by Interop Company. More information on ConneXions can be obtained from the address ole@interop.com.

Over the past few years, two trends have come together to present an opportunity for a new type of journalism. On the one hand, the trade press has focused on marketing and product reviews, leaving an ever-larger gap for a general-interest, technically-oriented publication focused on the Internet. At the same time, the Internet has made great progress in supporting multimedia communication, through standards such as IP multicasting and MIME messaging.

Internet Talk Radio attempts to fuse these two trends and form a new type of publication: a news and information service about the Internet, distributed on the Internet. Internet Talk Radio is modeled on National Public Radio and has a goal of providing in-depth technical information to the Internet community. The service is made initially possible with support from Sun Microsystems and O'Reilly & Associates. Our goal is to provide a self-sufficient, financially viable public news service for the Internet community.

Head: Flame of the Internet

The product of Internet Talk Radio is an audio file, professionally produced and freely available on computer networks. To produce these files, we start with the raw data of any journalistic endeavor: speeches, conference presentations, interviews, and essays.

This raw information is taped using professional-quality microphones, mixers, and DAT recorders. The information is then brought back to our studios, and edited and mixed with music, voice overs, and the other elements of a radio program. The "look and feel" we strive for is akin to "All Things Considered" or other programs that appeal to the general interest of the intelligent listener.

Our goal is hit the topics that don't make it into the trade press. Instead of SNMP-compliant product announcements, we want to present descriptions of SNMP. Instead of articles on GOSIP, we want to describe the latest Internet Drafts and place them in

perspective. Instead of executive promotions, we want to give summaries of mailing list activity and network stability. Instead of COMDEX, we want to cover the IETF.

Head: Town Crier to the Global Village

The result of Internet Talk Radio's journalistic activities is a series of audio files. The native format we start with is the Sun Microsystems .au format, closely related to the NeXT .snd format. This format consists of the CCITT Pulse Code Modulation (PCM) standard of 8 bits per sample and a sampling rate of 8000 samples per second, using the u-law [ed. use greek letter mu] encoding (a logarithmic encoding of 8 bit data equivalent to a 14 bit linear encoding). A half-hour program would thus consist of 64,000 bits per second or 15 Mbytes total.

Programs are initially spool on UUNET, the central machines of the Alternet network. Files are then moved over to various regional networks for further distribution. For example, EUnet, a commercial network provider for Europe with service in 24 countries, will act as the central spooling area for the European region. The Internet Initiative Japan (IIJ) company will provide the same service for Japanese networks.

The goal of coordinated distribution is to reduce the load on key links of the network. Transferring a 15 Mbyte file over a 64 kbps link does not make sense during peak times. On the other hand, a leased line has the attribute that a bit unused is a bit forever gone. Transferring large files at low priority in non-peak times has little or no incremental cost.

Files thus move from the UUNET central spool area, to regional spools, to national and local networks. We anticipate most of this transfer to be done using the FTP protocols, but some networks are discussing the use of NNTP news groups and MIME-based distribution lists.

It is important to note that Internet Talk Radio is the source of programming and does not control the distribution. These files are publicly available, subject only to the simple license restrictions of no derivative work and no commercial resale.

Distribution is controlled, as with all other data, by the individual networks that make up the Internet. We intend to work closely with networks all over the world to ensure that there is some coordination of distribution activity, but ultimate control over this data is in the hands of those people who finance, manage, and use networks.

We don't believe indiscriminate use of anonymous FTP is the proper method for distributing large archives. Previous experience with ITU standards, with RFC repositories, and with

large software archives such as the X Windows System indicates that setting up a top-level distribution hierarchy goes a long way towards alleviating network load.

Even with a top-level hierarchy, however, there will always be anonymous FTP sites and there will always be people that go to the wrong FTP server. This behavior is largely mitigated by setting up enough "local" servers and publicizing their existence. Like any large distributor of data, we are mindful of the load on the transcontinental and regional infrastructures and will take aggressive steps to help minimize that load.

Head: Asynchronous Times, Asynchronous Radio

Once files have made their way to a local or regional network, they are moved to the desktop and played. Once again the individual users of the network decide how to present data. We hope to see a wide variety of different ways of having our files played and only list a few of the more obvious methods.

The simplest method to play a .au file on a Sparcstation is to type "play filename." If the file is placed on a Network File System (NFS) file system on a central server, the user simply mounts the file system and plays the file. Alternatively, the user copies the file to a local disk and plays it.

More adventuresome playing of files uses multicasting. A simple multicast program called "radio" for a local Ethernet is available from CWI, the mathematics institute of the Netherlands. A more sophisticated approach, IP multicasting, allows a program to reach far beyond the confines of the Ethernet.

IP multicasting might be used on a local basis, or can have a global reach. There is a consortium of regional networks that have formed the Multicast Backbone (MBONE), used for audio and video programming of key conferences such as the Internet Engineering Task Force.

Internet Talk Radio does not assume use of the MBONE for playing files. Needless to say, the operators of the MBONE are free to play Internet Talk Radio files (and we would be delighted if this happens), but it is up to the local network affiliates to determine how and when they distribute this audio data.

In many cases, people will want to play files on a wide variety of different platforms. The Sound Exchange (SOX) program is a publicly-available utility that easily transforms a file from one format to another. Using this utility, the Macintosh, Silicon Graphics, DECstation, PC, and many other platforms can play Internet Talk Radio files.

Head: Geek of the Week

In the spirit of dignified, conservative programming, the first production from Internet Talk Radio is dubbed Geek of the Week. Geek of the Week features technical interviews with key personalities on the Internet. Some of the people who have agreed to appear on Geek of the Week include Daniel Karrenberg of the RIPE NCC, Dr. Marshall T. Rose of Dover Beach Consulting, Milo Medin of the NASA Science Internet, and Daniel Lynch of Interop Company.

Geek of the Week focuses on technical issues facing the Internet. This initial program is sponsored by Sun Microsystems and O'Reilly & Associates. Their support makes it possible for Geek of the Week to be produced professionally and then to be distributed at no charge.

One of the issues that Internet Talk Radio faces are the vestiges of Appropriate Use Policies (AUPs) that linger from the original ARPANET days. While Sun Microsystems and O'Reilly & Associates view Internet Talk Radio in terms of an investigation of on-line publishing, of multicasting, and other engineering issues, we feel it important that our sponsors are given due credit in the programs.

At first glance, this smacks of the crass and commercial. Indeed, it smacks of advertising. Jumping to that conclusion, however would be a simplistic mistake. The Appropriate Use Policies were formulated to guarantee that networks are used for the purposes envisioned by the funding agents. In the case of an AUP-constrained networks such as the NSFNET, this means that use of the network must benefit U.S. science and engineering.

We feel that an in-depth interview with Internet architects clearly falls within the purview of all AUP policies. However, we understand that certain networks may not accept certain types of programming. For this reason, our central spool areas are carefully picked so they are AUP-free. This way, if a network feels the programming is inappropriate, they can simply inform their users not to obtain or play the files.

It should be noted that one advantage of supporting the professional dissemination of news and information up-front is that the user is not directly charged. Somebody has to pay for information to be produced, and the sponsorship model means that copy protection, accounting, security, and all the other complications of a charging model are avoided and that high-quality news and information becomes increasingly available on the Internet.

Head: The Medium is the Message

While Geek of the Week is our flagship program, we intend to intersperse mini-features throughout. The Incidental Tourist, for example, will feature restaurant reviews and other travel

information for sites throughout the world. The Internet Hall of Flame will highlight non-linear behavior on mailing lists, and we will have periodic book reviews by Dan Dorenberg, one of the founders of Computer Literacy Books.

The logical extension to Geek of the Week is to begin coverage of industry functions. To date, we have received permission to tape for later rebroadcast sessions and presentations at the European RIPE meetings, the IETF, and at the INTEROP Conferences. We are negotiating with other industry forums to try and establish permission to cover additional conferences.

Our hope is to begin providing news summaries of these key conferences. If you can't make it to the IETF, for example, Internet Talk Radio would like to provide a half-hour news summary describing what happened on each day.

The next logical step is to begin producing analysis of key technical topics. Here, we look at in-depth (e.g., 15 minute) summaries of technical topics such as MIME, proposals for the next IP, SNMP v. 2, or the architecture of the Global Internet Exchange (GIX). We would also furnish analysis of political topics, such as the POISED effort to reorganize the Internet standards process, or the background of the IPv7 debate.

Eventually, our hope is to combine all these reports together and form a daily news broadcast to the Internet. When you walk in and start reading your mail, you simply click on the "radio" icon and listen to Geek of the Week while deleting messages from the more hyperactive mailing lists.

Head: Tomorrow is the Future

The "radio" metaphor was carefully chosen. We wanted an alternative to plain ASCII files, yet did not feel that the Internet infrastructure was ready for regular video feeds. Production of video or true multimedia required an order-of-magnitude higher investment in production facilities. After all, we know bad TV since we see so much of it.

Eventually, Internet Talk Radio wants to go beyond the confines of the simple radio metaphor. Already, we describe the service as asynchronous radio, recognizing that our listeners can start, stop, rewind, or otherwise control the operation of the radio station.

As a multicasting infrastructure gets deployed throughout the Internet, we see the opportunity to expand the radio metaphor and begin the creation of a truly new news medium. Multicast groups and videoconferencing tools allow the creation of an Internet Town Hall, a moderated forum with a very wide reach or games shows like Name That Acronym where everybody gets to play.

Because we are on the Internet, we can add a wide variety of different programming techniques. While listening to a series of interviews about MIME messaging, for example, you might also scroll through a series of Gopher menus that hold more information about the MIME standards, or search a WAIS database for a biography of the speakers.

We hope that Internet Talk Radio will be the first of many such information services on the Internet, supplementing the random anarchy of news and mailing lists with professionally produced news and information. Indeed, we hope that Internet Talk Radio forms the first of many "desktop broadcasting" efforts.

Internet Talk Radio debuts at the Columbus IETF at the end of March. Stay tuned for more information.

Head: For More Information

Guido van Rossum, FAQ: Audio File Formats, ftp.cwi.nl:/pub/AudioFormats2.10. An excellent introduction to audio formats, encoding, and other information about sound files on different platforms. This same site also has copies of the SoundExchange (SOX) program for translating files into different audio formats, and the Radio program for playing a sound file on an Ethernet.

## 323. Howard Stern Radio Listing - montly post

Newsgroup: rec.radio.broadcasting
Date: 1993-03-15 06:21:34 UTC
From: "ckunz\\"@src4src.linet.org
Message-ID: <1993Mar15.062134.18812@gagme.chi.il.us>
Source record: 43509

Another month, another list! We've got two new additions this month:

WBCN - Boston, MA KOME - San Jose, CA

Note that both of these stations broadcast the show at night. Howard said
he's doing this as a "favor for the company." Whether or not the stations
will move him to mornings, I don't know.

I don't want to start any false rumors, but I heard this promo on 99 Rock WPLR,
New Haven, CT: "If you say it, he will come... coming April 1st" Could it be?
We shall see.

Chuck
==
Welcome to the monthly Howard Stern Radio Network posting! These are radio
stations currently carrying the show. Also included are some cities which
may pick up Howard in the future. All times are local times. Thanks to
everyone who has sent e-mail making corrections and/or additions, they are
greatly appreciated! Please continue to do so!

*changed calls to KFBI?

End times have been left open since we don't know when Howard will shut up :-)

To write Howard:
923 K-Rock

600 Madison Avenue
New York, NY 10022

FAX: 212-759-KFAX (5329)
Prodigy: KROK92A (not sure if Stern crew reads it)

Cities that don't have the show, but eventually a station will pick him up:

Phoeniz, AZ - very likely
Fresno, CA - not anytime soon
Denver, CO - how much longer?
Hartford, CT - been promising this one for months
Miami, FL - two stations want to pick him up
Atlanta, GA - may happen sooner than I thought
Detroit, MI - been promising this one for months, too
Pittsburgh, PA - how much longer?
Providence, RI - very likely
Houston, TX - very likely
Seattle, WA - how much longer?

## 324. KGO San Francisco loud-and-clear in Canada

Newsgroup: rec.radio.broadcasting

Message-ID: <1993Mar15.062513.19020@gagme.chi.il.us>
Source record: 43512

So I was going up and down the AM dial, looking for something interesting amidst the commercial radio schlock in Vancouver (everybody's "Classic Rock" or "Soft Rock"). At 810 AM, I was able to pick up, loud-and-clear, KGO in San Francisco. Coincidentally, within about 10 minutes of my tuning in, KGO aired a tourism commercial for Vancouver!

It was refreshing to hear an all-night talk show; Vancouver hasn't had one of these for ages.

Is there a source for picking up the latest ratings information from the nice people at Arbitron for various markets.

I am most interested in the Seattle numbers but others would be welcome as well.

Maybe we need rec.radio.ratings?

[Moderaotr's Note: In Chicago, they are printed in the Rob Feder column in the Sun-Times as available. Perhaps you could check your local paper's media column. We encourage anyone to post the ratings from their respective markets. I have done so whenever I run across them. I will re-state the invitation to do so for those who may not have read it before.
Bill]

I think two guys in D.C. have come pretty close to that, and they were
the duo of: Harden & Weaver, until the recent death of Jackson Weaver
(who by the way, was the voice behind the national forest service PSA's
of 'Smokey the bear'.."Only you can prevent forest fires").

Another D.C. Trivia, is the fact that NBC's Willard Scott was a pal
D.J. to Ed Walker (Pioneer broadcaster who gave early recognition to
the blind in the workplace) back in the early days of radio in D.C.!
Although Willard started out as a D.J., he stayed away from the likes
of Smokey the Bear roles. Instead, he chose to be the very first
national "Ronald McDonald" mascot, portraying the clown in commercials.

## 327. Howard Stern in Boston!

Newsgroup: rec.radio.broadcasting
Date: 1993-03-15 06:25:56 UTC

Message-ID: <1993Mar15.062556.19104@gagme.chi.il.us>
Source record: 43515

Strange that Scott Fybush hasn't mentioned this: Howard Stern is now alive and broadcasting in the Boston area. His program is carried on WBCN-FM ("The Rock of Boston") in the 7 PM - midnight slot.

Could it be because Stern competes directly with WBZ's own David Brudnoy (a local favorite) in the very same time slot that Scott hasn't shouted this news from the rooftops yet? :-)

[Moderator's Note: Since Scott Fybush is a shameless sellout/spineless jellyfish and all around toe-er of the company line, it would not surprise me. :-) Bill]

Source record: 43516

You read it here first, before Billboard, Radio & Records, and
maybe even M-Street... (Hooray for electronic media)

Possibly related to Eagle 106 changing to a smooth jazz format,
Soft AC WKSZ Media-Philadelphia (100.3) has changed to a
Hot AC as "Z-100" effective today. Reports are that the sweepers
are being voiced by former Eagle Production Dir Sean Caldwell,
and the content of the sweepers matches a)what Eagle 106 was
doing before they quit b)What WPLJ New York has been doing
all year (and doing well with...) i.e. "No rap, no hard stuff,
and no sleepy elevator music, just the best songs on the radio".

If the music matches WPLJ's that would mean current hits that
aren't rap or heavy metal, and rock oldies from the last 20 years
(plus Beatles).

I'd give more analysis except they've only been on a couple hours,
and there's the steel walls prevent radio reception problem...

>From: Clifford Urr <cliffu@well.sf.ca.us>
>Subject: Internet Talk Show Radio and Audio

In today's New York Times (4/4/93), there's a fascinating p. 1 article titled, "Turning the DEsktop PC Into a Talk Radio Medium," by John Markoff. It is well worth getting a hold of this article given the possibilities discussed in it.

Seems like a Virginia-based entrepreneur has started up a 30 min daily radio show which is digitized into a computer file and can be downloaded from the Internet and listened to from a PC's speakers as well as in "real time" if you have the expensive equipment to do so. The files received offer a menu from which a user can choose his/her pick of interviews, book or film reviews and other categories to trigger the audio link for listening to the item the menu refers to.

The article mentions an analyst said that this shows the era of "mass media" is gone. Seems to me that custom and niche-driven media and publishing of an astonishing variety are going to blow in during the near future as users manage to land digitized audio files while fishing on the Internet.

For instance, instead of getting a text file of Gutenberg project files of classic literature, why not download an audio version of the book, a version read well by an actor or trained person? University and college librarians: why not digitized versions of the audio from conferences, well-known lecturers and professors from classes, experts of all kinds, etc., etc., etc.?? All librarians: audio, with help from the Internet, will be a *new way to convey information*, complementing or replacing text in many cases. (Time to get a Sound Blaster Board!) The article said that the Radio Talk show files were *not* yet available from Internet but will be soon. Comments, ideas on the possibilties anyone?

>From: "Peter Graham, Rutgers U.; 908-932-5908" <GRAHAM@ZODIAC.BITNET>
Subject: NYTimes article today Internet Talk Radio

NYTimes Thursday, March 4, 1993 (front page, upper left-hand corner prominence):

TURNING THE DESKTOP PC
INTO A TALK RADIO MEDIUM

By John Markoff

San Francisco, March 3 -- Talk radio is coming to desktop computers.

Within a few weeks, a Virginia-based entrepreneur plans to begin broadcasting a weekly 30-minute radio talk show on the Internet, the global computer network...

...[M]any computer scientists and telecommunications experts believe it signals the first step in a transformation in which national and even global computer networks will fiercely compete with--or even replace--traditional television and radio networks....

...Internet users will be able to obtain it as a file of computer data, just as they might "download" from the network a research report...

Listeners with sufficiently sophisticated gear can listen to the program as it is transmitted or choose to store the data in their computers and play it later. Listeners with less...can hear it only after the data have been received and stored. Either way, the program will be divided into segments....

The program is the brainchiled of Carl Malamud.... [he] said the program already had three commercial sponsors: Sun...O'Reilly & Associates, a technical book publisher, and Computer Literacy, a Silicon Valley bookstore chain....

Each weekly half-hour program...will be built around an interview...the "Geek of the Week." ... computer network news, gossip, book reviews and even restaurant reviews....

The data file comprising the entire half-hour program will require 15 million bytes of computer storage space....

[breaks over to p. D18, the business section. No ftp or subscription address is given. --pg]

Also Willard was the Washington, DC Bozo the Clown in the early '60s and
went on to host the revival of the Mickey Mouse Club locally in Washington
in the late 1960s on WRC-TV. In the '70s he also was the weekend weatherman
and later the primary weatherman on WRC-TV before he joined thr Today Show
and Today's weatherman Bob Ryan moved to Washington where he remains the
premier TV meteorologist on the DC airwaves.

The Joy Boys (Willard and Ed) ran on WRC Radio 980 AM until about 1973 when
the station switched over to a top 40 format, the 'Rock of the Capital' and
the 'Great 98'.

## 332. Howard Stern 'censored' in L.A.?

Newsgroup: rec.radio.broadcasting
Date: 1993-03-16 17:48:32 UTC
From: Bob Longo <longo@sfpp.com>
Message-ID: <1993Mar16.174832.16563@gagme.chi.il.us>
Source record: 43520

I read in the paper on Friday that KLSX in Los Angeles is now airing censored tapings of the Stern show. KLSX is taking this action to protect itself from further action by the FCC on behalf of citizens concerned over the content of these broadcasts. Apparently KLSX was fined a significant amount (sorry, I don't remember exactly how much) after complaints recieved by the FCC forced them to take this action.

-Bob Longo

[Moderator's Note: All this Stern bru-ha-ha still amazes me. As most readers know, I am not a Stern fan. But I cannot, for the life of me understand why so may people see him as such a threat. Who has he killed? What a pity that these 'concerned' citizens and our 'big brother' FCC cannot just let him run his course. All of this 'censorship' only serves to give him publicity and a mystique as an 'underground' guru. Bill]

## 334. Format Changes in Champaign-Urbana Market

Newsgroup: rec.radio.broadcasting
Date: 1993-03-16 17:52:39 UTC
From: e-bromberg@uiuc.edu
Message-ID: <1993Mar16.175239.16677@gagme.chi.il.us>
Source record: 43522

Two recent format changes in the Champaign-Urbana, Illinois market:

o WHZT-FM-105.9/Mahomet, owned by Adlai Stevenson IV, switches from The Heat satellite format to Z-Rock satellite format. No change in call letters. Before "officially" switching Friday 3/12 at 7 am, the station played Queen's "We Will Rock You" continuously for 24 hours. But they did no advertising...so listeners called the police out of concern that there was a problem at the station (e.g., that the DJ had died). They still have not purchased any advertising that I have seen, but the calls to the police were picked up by the daily newspaper, The News-Gazette, and the story was printed on page 3. <Free advertising on a slow news day...even on the prairie.>

o WUFI-AM-1460/Rantoul, which had been CNN 24-hours except for Rush Limbaugh 11 am-2 pm, has dropped CNN for an all satellite talk format, some from Business Radio Network, others from other talk networks...a real strange mixed bag, and no real stars outside of Rush. No, they don't have Larry King...King daytime was added by WDWS-AM-1400/Champaign which also continues with Jim Bohannon late night.

## 335. U.S. Radio Guide

Newsgroup: rec.radio.broadcasting
Date: 1993-03-16 17:52:54 UTC
From: jaslow@bissun.kodak.com
Message-ID: <1993Mar16.175254.16701@gagme.chi.il.us>
Source record: 43523

I don't know whether this has been mentioned in the past, but I thought I would post it anyway, for those of you who do not know about it. In a recent Sunday New york Times Travel Section, there appeared the following question and answer from a column set up to answer readers' questions. I have no affiliation with the author or publisher, nor do I even have a copy of the book; I just thought people like me who travel a lot would like to know about the following.

Is there a booklet for drivers listing major radio stations in the United States and their programs?

The publication that suits your needs is "Radio On Wheels", which comes in Eastern United States and Western United States editions. The bulk of each volume is devoted to an Interstate section. Under Interstate 95, for example, you will find 16 pages about the stations you can listen to on a drive from Key West, Fla., all the way to Fort Kent, Me. Listed for each station are format, frequency, signal power and, in many cases, when one can expect to hear news, sports and traffic reports. Each volume is $8.95.
"Radio On Wheels", by Paul Rocheleau, was published in July, 1991, and is available at some bookstores. Or you can order from the publisher by calling (800) 631-8571 or write Berkley Publishing Group, 390 Murray Hill Parkway, Department D, East Rutherford, NJ 07073. The shipping charge: $1.75 for the first book, an additional 75 cents for the second.

|> this news from the rooftops yet? :-)

More likely that nobody in Boston really cares very much about,
or for, this boring loudmouth. I hope, and expect, that he'll either
be off the air soon or cut back to at most 1-2 hours a night. As it
is, he's pre-empting all night-time music broadcasting on Boston's
primary rock station. What a waste.

From: rrb@airwaves.chi.il.us
Message-ID: <1993Mar17.074616.373@gagme.chi.il.us>
Source record: 43527

Just a note on the quote.

If you are quoting a previous article's text in a followup,
please use your editor to trim away all non-essential text
from that previous article.

Recently several articles are showing up here at airwaves.chi.il.us with an entire quoted article followed by a few lines of original text. I would appreciate it if you could do the editing yourself and only include as much quoted text as is required to make your point(s) and save me the hassle of trying to do an effective job of editing your piece for you.

Ths standard guideline is 49 (or less) percent quoted text to 51 (or more) percent original. I won't force you to adhere strictly to that, but I would really appreciate any efforts you can make to bring the quoted text to a minimum. If you are unfamiliar with your editor, Feel free to write me and I will try to assist, if I can.

Thank you.

>just let him run his course. All of this 'censorship' only serves to give
>him publicity and a mystique as an 'underground' guru. Bill]

I have to agree with you to a certain extent on this point... but it is NOT
just Howard Stern who garners all this listener (NON) hostility... We only
hear about him because he covers the globe... well, the states at least,
But...

A few years back, The SF Bay Area had the same type of concerned citizens
go on a station hunt when Perry Stone (another shock jock) made an on-the-air
comment about money, girl scouts, and their cookies (I wish I could remember
the comment) and the citizen police took over and involved more than just
station management...

I'm only surprised that the same citizen-thought-agreement-police haven't
*attempted* to pressure the FCC into canning the Talk Show Hosts in the
Bay Area because their ideas don't match those of the (few disagreeing)
listeners. (Maybe they have tried... and it just never made the news.)
IMO, (the specific station to which I am refering) the station has a darn
balanced line-up, from the far right libertarian to the far left of left...
and others scattered all over the field... When the far right libertarian
starts yelling "Impeach Clinton"... I don't complain to the FCC... I change
the station... when the far left of left starts calling everyone a racist...
I do the same thing... But some... have to call the station management and
tell them that so and so said this and I don't like it... get rid of them...
and then.... they listen to the show day after day anyway... isn't it any
wonder the host is still on the next day... he's making the station #1 in
the Bay Area still... Management can stand a bit of listener heat if it
brings in more add dollars...

... Then there's the folks who write to the advertisers complaining... I
have mixed feelings about them... I guess it is well within their right to
do so... and well within the right of the advertiser to pull their ads on
the offending shows... but something in all of that still leaves a bitter
taste on my tounge... I just can't identify it...

Enough of my babbling.. I am:

tweek@netcom.com tweek@tweekco.uucp WWIVNet 5@5058 4@5056
I'd rather get my cable service from the phone company,
than my phone service from the cable company.

It is a matter of control. If you examine each and every faction that seeks to "prohibit" or "ban" or "abolish" anything has as its number one goal the taking of control over people's lives. As we have seen from recent news events, "pro-life" is a misnomer; the real moniker should be "pro-control". Life obviously means nothing to people who would kill living, breathing, established human beings to further an end. So what is left? It is the issue of compelling other people to conform to a set of rules that have been arbitrarily created by yet another set of people. Tools available include government regulations (such as those provided by the FCC), legislation (compel others to conform to ideas by force of law), and violence (intimidate others to agree and conform and maybe just kill them if they do not).

The issue is not whether Howard Stern or anyone else can or would cause harm in any way. It is a matter of a group of people who do not like his "entertainment" and have decided that others are not to be permitted to decide for themselves whether or not the program is acceptable. Naturally, no one could, with a straight face, claim that Stern poses a threat to anyone, anywhere. But when it comes to the FCC, the "taste monitors" have always had the final say. The FCC's motto concerning programming is, "When in doubt, throw it out."

And you wonder why TV and radio in this country is such Pablum? And if you think this will change with the new administration, I have a trivia question for you. In which newly-appointed member of Clinton's administration's book is contained the concept of dispensing with "the mythology of individualism and self-responsibility"?

You are too stupid and naive to make your own decisions. Your wise and benevolent government will take care of you.

[Moderator's Note: Thanks, John, for yet another insightful synopsis of realtiy. Nice to know there are still some folks out there who can see past the window dressing. Bill]

## 343. Administrivia: Changes at archive site

Newsgroup: rec.radio.broadcasting
Date: 1993-03-18 02:55:11 UTC
From: rrb@airwaves.chi.il.us
Message-ID: <1993Mar18.025511.16030@gagme.chi.il.us>
Source record: 43531

To keep the Internet Radio Journal archive site a bit more tidy, with the ever increasing load of journals flowing in, I have made the following changes.

First of all, for those who do not know, the Internet Radio Journal (the email digest for rec.radio.broadcasting) is archived and available for anonymous FTP at deja-vu.aiss.uiuc.edu in directory/misc/rec.radio.b-cast. They are stored in compressed form by issue number. Also in that directory is a file called INDEX (all upper case) which holds all subject titles and in which file they reside. This file is not compressed.

As of now, there are three sub-directories in /misc/rec.radio.b-cast. They are called 'ISSUE_100-201', 'ISSUE_202-PRESENT', and ISSUE_SPECIAL (which contain articles that were not part of journals. When journal issue 300 is reached, there will be a fourth directory started.

The INDEX file will soon be split also into two files (for easier transfer) covering issues 100-201 and 202-?. Expect that within a week or so.

I hope these changes meet with your approval. Without them, the main directory would just become unmanagable. Let me know if you experience any troubles with this archive site, or if you know of another site (perhaps in Europe or Australia) which would be willing to archive the Journal as a backup.

Thanks

hm. now I understood from some other people that it was MU's station...

Still, they make the point that "alternative" radio (and alternative is
a buzzword which I use with a great deal of caution) can be commercially
viable.

This got some discussion in comp.dcom.telecom also. This
does look like the way a lot of people think the industry is going,
but I wonder about cost. With audio on demand and video on demand,
much more network bandwidth and storage is required. Are people
willing to pay the price when low cost "broadcast" (everyone getting
the same set of programs at the same time) services are available?
Further, audio distribution is much more expensive than ascii text.
If we run the audio thru fancy compression, we can get AM quality
(NRSC AM quality) at 56 kbps. I can send a lot of text at 56 kbps.

## 346. The Howard Stern stuff

Newsgroup: rec.radio.broadcasting
Date: 1993-03-18 02:56:35 UTC
From: bull@sonata.cc.purdue.edu
Message-ID: <1993Mar18.025635.16132@gagme.chi.il.us>
Source record: 43534

If the FCC is soo concerned with the material that Howard Stern is talking about then why don't they pull him off the air? But then if they do that they'd have to pull most of the Rap and R&B music off the air because it would offend just about any OLD person. It's about time that the FCC re-read the bill of right and allowed Mr. Stern the freedom to speak out against the system.
As it were described to me if Howard Stern is the exterme of the spectrum then Rush is the other. We don't see anyone knocking on Rush do we? I don't think so. Is this because the Rush people are the same people who are complaining about Howard? this leaves alot to wonder about.
Maybe the FCC should spend more time looking at the material on TV insttead of hounding Mr. Stern.

Mr. Entertainment

[Moderator's Note: As John Higdon has pointed out, all this Stern stuff is not about decency or lack thereof, but about controling the lives and behavior of people. Innovative radio programming, especially outspoken individuals who command a large chunk of airspace and aspouse non-standard views get a lot of flack because they give people ideas. There are a lot of people in control who would like to be the ones who create all the ideas. Individuals are a threat to their control. Limbaugh is not targeted because he aspouses what has come to be called 'tradional' values and neo-conservative doctrines. Limbaugh is not really that far removed from Stern, he just targets a different audience in a subtler manner.
Both Stern and Limbaugh have their 'new moony' style followers who believe that their guy is god. Most thinking people know that they are both merely entertainers doing their thing for their audience. I say let Limbaugh, Stern and all of them talk. Those who would 'shut-up' spokespeople with which they disagree, are the real threat to our freedom, NOT the spokespersons themselves. Bill]

"It's not SO WRONG" Kevin Mattews

"If common sense is so common then why is everybody surprised to see it used"

## 347. Some seeds for discussion - Radio news integrity?

Newsgroup: rec.radio.broadcasting
Date: 1993-03-18 03:00:24 UTC
From: barry@jab.tucson.az.us
Message-ID: <1993Mar18.030024.16365@gagme.chi.il.us>
Source record: 43536

The attention of many has turned to two major problems with broadcast
news organizations:

1) New integrity, especially as not practiced by NBC. Other
organizations are also suspect, with poor reporting
being identified by incomplete fact gathering and/or
obvious bias in the report.

Is this caused by the ratings/money game overcomming
good sense, or are we seeing the outgrowth of children
without proper education (both in reporting and ethics)
being paid too much to be sensational?

More directly: Have any of you ever written to the
network feeding your station, remarking on the
quality of the news reporting? Did you get an answer?
Responses so far indicate a lack of concern by the nets
for the people in the "sticks."

2) Have we reached the point of "Incremental News Coverage" (INC)
making a lot of news reporting a mere vamp, and waste of
air time? Arthur Kent remarked the other night that too
many reporters try to stay on the air with NOTHING to
report, then report nothing over and over, hoping for
some morsel to add. The scene of hundreds of reporters
reduced to reading sheets in Waco ... or the forced
arrest in the NY WTC bombing due to immenent
publication that the authorities had a lead to a suspect
... certainly neither add to the real knowledge and
understanding of the public at large.

IMHO, CNN is the world major practicioner of INC, and
while some people may be glued to their sets hoping for
a major shootout in Waco, why isn't there more insight,
for example, into an agency that is obviously over its
head and dangerously botched an operation that is no more
important to society than any of the dozens of hostage
situations handled every day by police agencies?

One report has it that ATF is fighting being parcelled
out to other agencies, so they wanted a major bust.
Hey, they don't even have their own TV show! <g>

In any event, if they control the phone lines, and power,
they've said, why didn't they use that control and
prevent the media circus?

Just some thoughts, since Bill wants some discussion...

barry

## 348. Some more seeds for thought and discussion

Newsgroup: rec.radio.broadcasting
Date: 1993-03-18 03:00:40 UTC
From: barry@jab.tucson.az.us
Message-ID: <1993Mar18.030040.16390@gagme.chi.il.us>
Source record: 43535

Two items worth discussing:

1) The NAB recently decided the FCC
self inspection was not necessary, and a waste of
time and effort. The FCC then promptly declined to
continue the project.

2) A recent insert in Radio World praised a certain supplier.
The recalls an incident some time ago, but the
problem is increasing due to the poor cash flow
of the 80's.

In ordering a needed replacement part, I had a
check sent out to pay for it. However, a week
later, the part had not arrived. In dire straits,
I called the supplier, and was told the station had
owed something in the past, and they kept the check
as payment of that balance, and weren't shipping the
current order.

While I feel stations should pay the bills, I also
feel it was extremely rude and inconsiderate of the
supplier to not inform me of their actions. It put me
in a very difficult position, and from that time
until this, I will not purchase from them, nor
recommend anyone else do so.

That point aside. Anyone have true stories of being
brought in to handle an emergency or other outage,
and discovering the key supplier either demands Cash
in advance, or won't sell at all at 3AM?

barry

[Moderator's Note: Thanks for the seeds, Barry. Now let's see if our
readers would rather discuss radio, or the latest Howard Stern gossip. I
hope we can get some more serious radio talk going here again. Bill]

As of March 17 1993, WOLN-FM 91.3 in Olean NY has begun broadcasting as a satellite of WBFO-FM 88.7 in Buffalo. WBFO is a charter member of National Public Radio, serving Western New York with NPR News and Jazz. WBFO is licensed to the State University of New York at Buffalo, and has been on the air since 1959. The sign-on of WOLN culminates a lengthy effort to provide NPR service to part of the southern tier of Western New York and part of northwest Pennsylvania.

>Could it be because Stern competes directly with WBZ's own David Brudnoy
>(a local favorite) in the very same time slot that Scott hasn't shouted
>this news from the rooftops yet? :-)

>[Moderator's Note: Since Scott Fybush is a shameless sellout/spineless

>me. :-) Bill]

Ahem!

Scott hasn't posted about this in large part because Scott has been more or less living at WBZ for the last week and a half. :-)

Seriously, it's been quite a couple of weeks. The day after Howard premiered here, I left for NYC, where I visited WINS (WBZ's sister station) and ABC Radio News. WINS was pretty much as expected; a typical-looking radio newsroom. ABC was neat, though...they're using the D-CART system. Just imagine...no more carts to break or warp or jam or miscue! D-CART puts the audio in digital form on a hard drive, where it can be called up at any terminal in the newsroom (no more "catch the flying cart!"), sequenced for air, and then called up by a button on the air board. The ABC people tell me they've had some delays getting started, and now that it's in place, there have been a few tech problems...but they're happy with it and it looked neat.

Then I returned to Boston for a week of hard work, followed by The Blizzard of '93. It was quite a weekend...we were on the air with news nonstop all day Saturday and most of Sunday; we had live news overnight Sat-Sun (unusual for us), and none of us could drive home Saturday night, so we all stayed in the hotel next door. WBZ was only off the air for a few minutes Sunday morning. I can't wait to see the next Arbitrons!

The subsequent melting of snow fried a transformer near the office of the company that owns the World computer system, so I was offline until Wednesday noontime.

Now that I'm back, let me be the first to tell you: Howard Stern is now in Boston, tape-delayed to 7pm on WBCN 104.1 :-) David Brudnoy is not worried about Howard; they're aiming for very

different demos (David's listeners tend to have brains, for one thing ;-)...and so there's no competitive reason for me not to share the news about Howard.

BTW, under the heading of "shameless toeing of the company line," let me share the results of the Associated Press' radio awards for Massachusetts. WBZ took #1 in Station of the Year, Continuing Coverage, Special Events, Breaking News, Best Newscast, Best Sportscast, Best Sports Play by Play (we took #2 there as well), and #2 in Best Feature. I put together our entry tapes, so I have to say I feel pretty good about this :-). Seriously, I do wish there was more news competition in town; it does nobody good to have only one radio station with a serious news committment.

Happy to be back on-line (and looking forward to a quiet weekend at home!)

Scott Fybush -- fybush@world.std.com

## 352. KLOL Syndicates Its Morning Show

Newsgroup: rec.radio.broadcasting

Source record: 43540

Talking to my parents last night in Houston, they say the HOUSTON CHRONICLE reports that AOR KLOL-101.1's morning team Stevens & Pruitt (sp?) is going to be syndicated. They are to start simulcasting on classic rock WCKW-FM-92.3 LaPlace-New Orleans-Baton Rouge/WCKW-1010 Garyville LA. WCKW-FM's New Orleans rival, AOR WRNO-99.5, carries Howard Stern's show.

Like Stern, S&P are pretty much into talking about sex. I haven't listened to their show in ages, but their most talked-about feature is usually "Sex Trivia" at 9 AM.

>themselves. Bill]

I agree with both of these statements...I think we should just let
them talk (although Stern is god, and Rush sucks :) ). They are
entertainers who are trying to draw the most listeners, especially away from
the other...but as for Rush's views being common? I'm not so sure...here at
good old U of R (Rochester) it would appear to be so, but those of who
refuse to believe would argue that Stern puts up a good fight against all of
today's mediocraty (is that a word?)
Deathmonger

--

I don't think that controlling someone who is innovative or outspoken is the issue. The issue with Howard (and the reason the FCC is handling complaints about him) is that he is broadcasting material unsuitable for all audiences listening during his broadcast timeslot. In my opinion, the acid test for broadcasts is: "would I let my kid listen (or watch) this material?". Howard clearly falls in the NO! category. Rush Limbaugh never says anything I would not want my children to hear.

If Howard was on from 11:00pm to 2:00am, I don't think anyone would be hastling him. Adults should be able to listen to or watch anything they choose, and I am in no way proposing limiting Howard's freedom of speech. I am, however, advocating helping parents who are trying to raise their childern with a certain set of values keep material from them that they deem inappropriate. Today any kid with a Walkman can listen to Howard on their way to school and he parents can't do a thing about it. This is, in my opinion, wrong and no different from a magazine dealer displaying X-rated photographs on a sidewalk news stand. Again, I have nothing against X-rated material FOR ADULTS if that is what they choose - but I don't want my child to have free access to it.

"Bob Longo" <longo@sfpp.com>

I don't think that controlling someone who is innovative or outspoken is the issue. The issue with Howard (and the reason the FCC is handling complaints about him) is that he is broadcasting material unsuitable for all audiences listening during his broadcast timeslot. In my opinion, the acid test for broadcasts is: "would I let my kid listen (or watch) this material?". Howard clearly falls in the NO! category. Rush Limbaugh never says anything I would not want my children to hear.

If Howard was on from 11:00pm to 2:00am, I don't think anyone would be hastling him. Adults should be able to listen to or watch anything they choose, and I am in no way proposing limiting Howard's freedom of speech. I am, however, advocating helping parents who are trying to raise their childern with a certain set of values keep material from them that they deem inappropriate. Today any kid with a Walkman can listen to Howard on their way to school and he parents can't do a thing about it. This is, in my opinion, wrong and no different from a magazine dealer displaying X-rated photographs on a sidewalk news stand. Again, I have nothing against X-rated material FOR ADULTS if that is what they choose - but I don't want my child to have free access to it.

..And I reply...

Why is it that when something is available in the free market, that someone does not like, they look to the all-mighty government to prohibit it? Bob, I don't like Mr Stern's act any more than you do. But to advocate censoring and supressing it because of that opinion is, to me, absurd. You mentioned not wanting your children to have free access to Stern. Since when is it the governments job to raise your (or my) children? I would say that if Stern's influence, as a radio personality, is stronger than yours, as a parent (and I am not singling out Bob in this but in general), then Stern is the least of your worries. Besides, I would hardly compare Sterns childish potty-talk to an X-rated magazine.

You said that "Rush Limbaugh never says anything I would not want my children to hear..." . Well, Rush says a lot of stuff that many people find _extremely_ offensive. Perhaps not offensive to you, but to many others. Millions of people like Mr Limbaugh's act. While at the same time there are millions who find Stern's act entertaining. Should we cut Stern because he offends group-A, and allow Limbaugh because he offends group-B? It is a dangerous thing when we attatch absolutes to our personal tastes. Speech is only that, speech. Nobody was ever scarred for life by listening to Stern OR Limbaugh. It all depends upon your perspective, Bob. My perspective is to let everyone talk and let the market decide who wins.

Why is Stern on during the day? Simple, that is where the listeners are. Evem Mr. Milktoast, Larry King has seen the light, so to speak. Sure, adults could listen to Stern at night, but let's face it... what is adult about Stern? He appeals to 18 -30 year-old males, even younger. And if you are afraid of your (the editorial use of "you" and "your") children hearing and seeing insipid, semi-sexual stuff, you had better either lock them in a closet for their childhood, or.. <gasp> raise them in a way that they reject such garbage voluntarily. Even a PG movie has more so-called obscene language that a hundred Stern shows. One cannot watch an HBO or Showtime without hearing language that would make your grandmother have a corronary :-).

Prohibition has, historically, done little to curb the appetites of mankind. On the contrary, it makes the banned commodity all the more valuable, and the purveyors of that commodity quite famous and wealthy. Such is the case with Stern. The more he is hassled, the more popular he will become. If we ban him because somebody's kids may hear something that likely pales in comparison with what they already say amongst each other, then we have taken a mighty step backwards in freedom of speech. Who might be next? Limbaugh?

Bob, you said above that the acid test is ..."would I let my kid listen (or watch) this material?"... I respond that there is more on the average soap opera, crime drama or the nightly news that I would be unlikely to approve of for my kids, then there would be on either Stern or Limbaugh. Killings, rapes, tortures, these are all mainstays of prime time TV. Big difference is that Stern is a joke, a put-on... so is Limbaugh to a great extent. But the content of the news, and the shock-tabloid magazine shows, is at least proported to be the truth. My kids know the difference between the ravings of an entertainer and the realities of life. I believe that THIS is the acid test.

Anyway, just my .02 worth.

...About Internet Radio...

> Are people
>willing to pay the price when low cost "broadcast" (everyone getting
>the same set of programs at the same time) services are available?
>Further, audio distribution is much more expensive than ascii text.
>If we run the audio thru fancy compression, we can get AM quality
>(NRSC AM quality) at 56 kbps. I can send a lot of text at 56 kbps.

>Harold

My thoughts also...it's much cheaper to buy a portable radio than
Soundblaster card and associated equipment.

I would like to see something like this happen, where listeners/viewers
chose when they want to view/listen to 'program x.' Maybe when the cost barrier
is a little more feasible...

...about self inspection...

> 1) The NAB recently decided the FCC
> self inspection was not necessary, and a waste of
> time and effort. The FCC then promptly declined to
> continue the project.

I feel that this is too bad, alot of self correction can be made without
having to worry about excessive fines. I ordered a copy of this from Harold
Hallikainen (sp?), and I find it very helpful.

...and about broadcast news integrity...

>The attention of many has turned to two major problems with broadcast
>news organizations:
>
> 1) New integrity, especially as not practiced by NBC. Other
> organizations are also suspect, with poor reporting
> being identified by incomplete fact gathering and/or
> obvious bias in the report.

Oh, this is a big 'irk' of mine. I won't go into my rave here, but
when will we get to real, hard, 'no half-truths and partial facts'
reporting-tv/radio journalism? I'm getting tired of the broadcast
version of "People" magazine.

> 2) Have we reached the point of "Incremental News Coverage" (INC)
> making a lot of news reporting a mere vamp, and waste of
> air time?
Um, imho, yep.

> In any event, if they control the phone lines, and power,
> they've said, why didn't they use that control and
> prevent the media circus?

The desire for attention, I beleive. Lots of instances where a 'media
circus' was publicly denounced, but privately created.

>Just some thoughts...

And my opinions, (with asbestos suit donned)

YARGH! Being the liberal-minded-token-young-punk, there are MANY things that
Rush says that I don't want my kids to hear! Oh, off with his head!!!!!
Let's get rid of the whole lot of them conservative bastards! :*)

And Bill sez...
>Since when is it the
>governments job to raise your (or my) children? I would say that if Stern's
>influence, as a radio personality, is stronger than yours, as a parent (and I
>am not singling out Bob in this but in general), then Stern is the least of

>an X-rated magazine.

I agree whole-heartedly! Being fairly new to this parent thing, I realize
that it was a lot easier to say things then to do them, but the child's
parents are in charge of that child, so to speak.

If you don't like what's on the radio, change the station, or turn it off.
And don't think if you prohibit your kid from listening to it at home, that
that's the end of it. I remeber in grade school, I used to hear (well, and
yes, say...) stuff that makes Howard look like he's having a prim and proper
tea party. Things like cussing, inappropriate subject matter, etc. are
everywhere. It's better to teach you child how to deal with it, rather than
shield them from it. If you do sheild them from it, as soon as the opportunity
comes, the kid'll either go for it full ghusto, or collapse in being
overwhelmed by it all. In high school, I saw both...

Hey, look what prohibition did to booze sales!

[Moderator's Note: John, your statement "...or collapse in being
overwhelmed by it all..." is a matter of grave concern to me also, although I
did not think of it till you mentoned it. I am always amazed at how many
parents sheld their offspring from anything questionable, then expect them to
function successfullly in that very 'big bad ugly' world from which they were
shielded. Lots of abuse comes from that. This makes me very sad... and
angry. Bill]

Bob,

I hat to make this type of generalization about you, fore I don't even know you personally...But I do have to say that it is attitudes like yours that are going to be bringing this country down. Why tell Mr. Stern that he can't broadcast until late night hours. Here in Indiana we have two (sorta) shock jocks that for over ten years the church groups have been trying to bring down with the helpp of the FCC. BUt every time that they try to bring them donwn the ratings seem to go throught the roof. I don't understand how this happens but I do know that the people who weren't listening were the one that happend to file the complaint. If it amazes you even more, I dare say, that the target demo's for that station (Q95 Indianapolis) are for 18-54 Male adults

BUt in the morning many kids listen to it also (just because they are not included in the ratings game).
not only for the reason that the times that they are on, but also becuase they provide the type of entertianment that I find pleasurable. BUT (the infamous word) I do have to say that at times they both offend me, but that doesn't make me run out the door and scream for a time change for the two.

To quote George Carlin "Hey minister haven't you heard that there is two knobs on the radio???? One is for changing the channel and the other....is for turning the radio off" I think that would be the thought that runs

through my head when I here poeple complain that Mr. Stern is TOO acidic for normal people's ears. NOone has the right to tell me what is too acidic for my ears. AND that is what the FCC is trying to do to Stern bbut not to Rush AND that is what offends me the most CENSORSHIP BY OTHERS.

Sorry if this wanders from the point that this bbs is up for but I had to vent some steam to this response.

Mr. Entertainment

[Moderator's Note: I tried to email you, but it bounced. IMHO means "In My Humble (or Honest) Opinion. Thanks for the post. Bill]

# 361. STERN FLUFF & STUFF

Newsgroup: rec.radio.broadcasting
Date: 1993-03-20 00:22:18 UTC
From: WEOS-FM <BLACK%HWS1%HWS.bitnet@CUNYVM.CUNY.EDU>
Message-ID: <1993Mar20.002218.2476@gagme.chi.il.us>
Source record: 43549

I have replied before, and like the moderator, I am not a Stern fan. I would rather be listening to music or NPR than the waste of enegry that is used to broadcast his material (and that goes for Rush too!) [Note, my opinions].

What Bob Longo posted I partially agree with. If Howard was on in the evening, I don't think the FCC would have blinked. Comparing Rush to Howard is not a good comparioson except for the entertainment aspect. Is Rush "dangerous", does he offend? yes. However, even under the FCC's indececny definition, for what is poor at best, Rush would not violate the standard. Howard comes close and crosses over it, frequently.

We have to remember, the Supreme court upheld the use of indecent speech, but in areas where children are not likly to be in the audience. This was implied by time of day, rather than "children aren't in our demographic, anyhow". This is what the courts are going to have to decide, if audience data is a basis for exemption from the Safe Harbor period.

A "reasonable" safe harbor is not really out of line. Again, I question the ability of radio to reach you, whether you want it to or not. Yes there is a knob on the dial, but wouldn't it be nice to know, that while you are driving your kids to school, you don't have to worry that a DJ compromises your children's values? [Don't get your hackles up. This is just an example].

In addition, what about the unfortuante listeners who live in the blanketting area of transmitters? They may have no choice, if they want to listen to the radio.

Should Howard be on the air? yes. At 6am? not so sure. Perhaps when the radio world goes DAB, one feature of the radio would be a "parental lock", similar to what is availble on cable TV. This may solve the problem. It is still up to parents to raise their children, not the government.

As a final comment, The FCC's indecency definition is just too broad. We know it was conceived to target music, comedy, shock jocks, etc. However, even bonafide news programs (note: Howard Stern-NOT!!) have been subject to FCC investigation. NPR programs and the CBC frequently will not edit out language they feel is important. THis has caused complaints to be filed. The FCC dismissed one complaint against NPR, but it is being appealed by the complaintant. This, unfortunately, is the fruitage that this law can produce.

We are re-airing a series on child sexual abuse, called Little Secrets. It is a WONDERFUL program, was hailed by critics and provided wonderful outreach. However, even though a disclaimer is at the head, a valid indecency complaint could be tendered, as we are airing this outside of safe harbor. It is offensive to think that the same law tha fined Infinity for the infantile dribble that Howard spurts out, also could fine outstanding Public Affairs

and News programs. Go figure!

[Moderator's Note: But Michael, don't you see that IS the point. Once arbitrary standards can be set and enforced, nothing is safe, not even a fine program like you describe. Once we get too damned comfortable giving the government the authority to control the content of our media, nothing is safe. Today it is Stern, tomorow, Little Secrets, then what? Libraries already have, in many cases, been forced to remove Huck Finn and Tom Sawyer from their shelves because the books are allegedly racist. Darned near anything can be said to offend someone. That is why all freedom loving people must protect the rights of Stern, Limbaugh and all the rest. If we support the censorship of one, because we *personally* don't like him/her, we give up our right to choose later, when it IS our ass on the line. I read something in a sig file once that said. "When the took away the XX amendment, I said nothing because I did not own a gun. When they took away the XX amendment I said nothing because I dont sell dope. When they took away the XX amendment, I said nothing because I am not a criminal. **NOW** they have taken away the first amendment, and I can't say anything at all..." (sorry for not knowing these amendments by number) .. Bill]

"Bob Longo" <longo@sfpp.com> writes:

> In my opinion, the acid test for
> broadcasts is: "would I let my kid listen (or watch) this material?".

I could not disagree more. What YOU personally would allow YOUR children to hear or watch is not a universal standard for what should or should not be permitted on the air. "What is good for 'the children'" is just another refuge for those who want to control what and when others may or may not hear or see material.

No one has ever introduced hard evidence that offbeat ideas or even sexually explicit material has any effect on children one way or the other. The Meese Commission failed to do this as well as the TWO Nixon commissions that were formed for the express purpose of demonstrating the harmfulness of "pornography".

So with that said, how you bring up your children is your own affair. Whom you coerce to help you is likewise. But whom you COMPEL, through the force of regulation or law, to conform to your convenience in raising your children is of concern to me as someone who is directly affected in the limitations of my choices.

A child who wishes to put his hands on material you have deemed harmful will do so regardless of your best efforts. The fact of the matter is that worldly stuff is in the world. The sooner children learn about it and learn to deal with it, the better. You may wish to shield your children from reality and it is certainly your right to do so as a parent. But it is not your right to manipulate the society for your convenience. My right to unrestricted access to any legal material supercedes your right to have it suppressed for your convenience in raising your children in a particular manner.

I am not a partner or an enlistee in the raising of your children. I am already paying for their education and a number of other subsidies that have been deemed necessary for the good of society. Please do not add to the burden by attempting to "Pablumize" the world so that you can further your child-rearing agenda.

> Adults should be able to listen to or watch anything they
> choose, and I am in no way proposing limiting Howard's freedom of speech.

You most certainly are. Dictating "acceptable" times is a limitation of freedom of speech, particularly when those restrictions are born out of your value judgments for "what is best" for your children.

> I am, however, advocating helping parents who are trying to raise their
> childern with a certain set of values keep material from them that they deem
> inappropriate.

You may deem inappropriate whatever you like. What you may NOT do is
tell adults what, when, and where they may exchange ideas or even potty
humor. If it terrifies you that your kids may hear some of this, it is
your sole responsibility to handle it within the scope of your family
influence. Do not enlist me or my government to further this end,
please.

> Today any kid with a Walkman can listen to Howard on their way
> to school and he parents can't do a thing about it.

Bingo! And it matters not what time of the day it is. Ever heard of
"time shifting"? What kid does not have a cassette recorder these days?
How about a Walkman under the bedcovers? Do you see? Your inconveniencing
the masses because of your value judgments accomplishes nothing.

## 363. Censorship (was Howard Stern)

Newsgroup: rec.radio.broadcasting
Date: 1993-03-21 05:28:49 UTC
From: guidotti@ICD.Teradyne.COM
Message-ID: <1993Mar21.052849.2671@gagme.chi.il.us>
Source record: 43552

Here's my $0.02 on Stern.

The matter is one of self regulation. While we sit here and complain about his language and whether or not some government agency has the right to censor him (my copy of the Constitution emphatically and quite simply says, "no") we miss the central point. That the man is on the air and making money is a statement in itself. The beauty of Amendment I is that it gives us the freedom to say and do ANYTHING, even though a sense of community responsibility would result in a "no" to much of what we _could_ say. Sadly, fewer and fewer broadcasters and members of the print media are exercising voluntary restraint. It will not be fixed by censorship.

While the rage goes on about Stern and while the pages of "Broadcasting and Cable" report about commercial content in children's TV, congress continues to sell out our future. My reading of the First Amendment has the press positioned as a government watchdog. When the government has been allowed, even encouraged, to grow to the point where it now employs more people than private industry, I have to ask just how effective our free press has been. It takes 3 elements: An informed public, a diligent press and honest legislators, to make an effective government. Remove one and the system breaks. While the argument may quickly become circular (who should change first), I believe that the corps of news people have the highest responsibilty, given that they have been granted the highest right by Amendment I, to report on and watchdog our elected officials, daily. No other activity is more important.

Neither in the newspaper nor on local stations, do I see evidence of effort to report on the regular activities of elected officials. I _do_ hear a lot about crime, fires, cutesy lifestyle reports and the like, but precious little on the behavior of my elected representatives. Why not? Isn't this the main reason Amendment I protects the free press?

What would it take for stations to begin regular reports on the activities of elected officials? Yes, we have CSPAN, but that's undigested. To argue that CSPAN is the answer is no different than asking every citizen to go to Washington to watch for himself. I'd like to see an effort by the press to cover our officials, on a regular basis, as real news.

mark

What a bunch of nonsense. When I was a kid I got in trouble for listening to the ballgame when I was supposed to be asleep. If I wasn't following the home team I was listening to "I Love a Mystery" (radio at its best).

Kids will listen to what they want. They will make their judgements based on what they are taught and from their peers.

You can't force your kids into a mold, you can only guide them into being the responsible people you would like them to be.

You takes your chances, crosses your fingers, and hopes for the best.

If Limbaugh or Stern have an effect on a child then perhaps you (editorial you) have fallen down on the job. You cannot protect a child from the world; the best you can hope for is to prepare them for the world.

So...I agree with John. Don't look to others to raise your child. Prepare them for adverse opinions and train them to make up their own minds.

I like to think that is how my parents raised me. Even tho' I did get in trouble for listening to "I Love a Mystery".

## 365. Changes in the Hartford market.

Newsgroup: rec.radio.broadcasting
Date: 1993-03-21 05:29:26 UTC
From: "A.J. Janschewitz" <p00258@psilink.com>
Message-ID: <1993Mar21.052926.2741@gagme.chi.il.us>
Source record: 43554

WTIC-FM (Hartford), suffering in the ratings, fired its Program Director on Thursday. Friday morning, the temporary morning host, Larry Wax, who had been working as a "full-time part-timer" while the station took out ads in R&R soliciting tapes saying that "our mornings aren't good enough yet," drew a line in the sand and asked the station's general manager if he was going to stay. When management continued to waffle about it, Wax walked.

Rumors continue to circulate that WTIC-FM, once the dominant CHR station in the market, will sign on to Howard Stern's satellite net.

For the first time ever, WTIC AM (a 50,000-watt 1-B clear channel, sharing frequency dominance on 1080 with KRLD) and FM are being sold to advertisers as a combo buy. Until recently the stations had separate, and often competing, sales staffs. The AM is a talker, with an information mix in AM drive, a local newspaper columnist with no radio experience from 10-12, then Rush Limbaugh, followed by more conservatalk for the balance of the day.

The changes at WTIC, which some people see as frantic moves at repositioning at what was once the undisputed market leader, follow a very strong fall book for the two area country stations, WWYZ (Hartford) and WPKX (Springfield), and a suprising statistical dead-heat for first place among adults in morning drive between WTIC-AM and WCCC, an AOR that has a Howard Stern soundalike in its wakeup slot.

WTIC management denies persistent rumors that the station is for sale. Its parent company has sold off all of its other broadcast properties, but claims to have taken the Hartford radio stations off the market.

Meanwhile Gary Craig, who was fired by the now-former program director at WTIC-FM, has picked up much of the audience he held during nearly ten years as the station's morning drive personality with his re-emergence at WKSS after a six-month legal battle fighting WTIC's platoon of lawyers who tried to enforce a non-compete clause in his contract. Craig's contract had not been renewed before his firing and was voided in court. He started at WKSS a week later.

## 366. Somebody ought to buy KTID

Newsgroup: rec.radio.broadcasting
Date: 1993-03-21 05:29:52 UTC
From: rcoryell@well.sf.ca.us
Message-ID: <1993Mar21.052952.2771@gagme.chi.il.us>
Source record: 43551

There's a little, lame AC station in San Rafael (KTID) with a noble heritage. Formerly KTIM, it is the alma mater of a good percentage of the air talent in the Bay Area. In its prime, KTIM was a critically lauded eclectic AOR, then a fella from Orange County bought it up in the early 80s and proceeded to alienate the listeners, and worse, the entire business community.
So here's the deal... he's in bankruptcy, according to several published reports. This small station *is* viable... smack dab in the middle of one of the richest counties in the country. There is a niche for eclectic AOR in the Bay area...they could probably do a 1 share in SF and break even, with retail bucks from marin and concert advertising etc. KTIM meant a lot to many of us in the Bay area..there are more than a few good broadcasters who would happily take a pay cut to go do something fun and make that station work again. You could probably buy it for a million if you are a good negotiater, although I understand the owner, one Art Aster, wants more. It ain't *worth* more, and he knows it. also includes 1510 am. Please, somebody buy this radio station, then get out on the streets and convince the retail community that KTIM is back and Aster is out!

[Moderator's Note: I, to, remember the mid-70's KITM (98.3, isn't it?). I lived in the Haight (on Clayton) in the shadow of Sutra tower. The big stations were KSAN and KTIM, the latter was difficult due to the intense energy from Sutra. We also had KPOO, a 10 watt 'underground' station. Ah, the good ol days in Golden Gate park with my dog and KTIM on the box. Times change, indeed. Bill]

>the comment) and the citizen police took over and involved more than just
>station management...

Stone actually got into an argument with Girl Scouts on his show.
He asked them why they didn't pocket some of the money when they
sell cookies. They replied that it would be dishonest. He then
started yelling at them about how stupid they were. The girls
understandably got very upset. He didn't get fired because
he said a "few things that some people disagree with." Perry was
ridiculing and harrassing kids. Something like that will
get you fired from any job.

## 370. CURSEword summary, March

Newsgroup: rec.radio.broadcasting
Date: 1993-03-21 05:47:22 UTC
From: "Frank C. Haulgren" <haulgren@HENSON.CC.WWU.EDU>
Message-ID: <1993Mar21.054722.3134@gagme.chi.il.us>
Source record: 43558

The March issue of CURSEword has been mailed. CURSEword is the monthly newsletter of CURSE (Censorship Undermines Radio Station Ethics) the group that is ferociously fighting the management of Seattle's KCMU. KCMU has replaced a significant amount of local programming with daily broadcasts of the World Cafe produced at WXPN, has tried to replace volunteers programming during crucial times (like evening drive) with paid jocks and suspeneded its entire volunteer news department out of fear that the news staff might report on the stations troubles during its newscasts.

I've previously sumarized other news about this story if you need more background please contact me.

I cannot vouch for the accuracy of any of the information in CURSEword. The publishers state in the mast head that the storie reflect the ideas and positions of the writers wheich may or may not accurately reflect the concensus position of CURSE. They also encourage copying of their newsletter.

Copies are available free from CURSE, Box 23217 Seattle, WA 98102-0517 or by calling the hotline at 206-298-CURS.

Mark Iverson writes a two page piece raising and trying to document the possibility that KUOW (the University of Washington's other radio station) will bail out KCMU if need be. Iverson writes:
"KCMU's budget is initially supplied by the UW. This means that if the UW grants KCMU a $120,000 budget for the current year, that money will be advance to the station in full before any fundraising takes place. The UW grants the budgeted money based primarily on KCMU's past fundraising success with the confidence that the station will have no problem paying the money back. For at leas t one year after the begining of the UW's fiscal year, then, KCMU will have enough funds to cover its operational costs. This means that for the current fiscal year KCMU will engage in deficit spending by using UW money that they, for the first time in their history, will not be able to pay back.
" When the programming changes at KCMU created a strong backlash against the station, Wayne Roth adressed this issue. In a December meeting with CURSE board member Mike Fuller, then CURSE spokeswoman Grace Crowley and attorney Todd Maybrown, Roth clearly stated that if KCMU ran into financial difficulties, he would ensure that it receives enough money to cover operating costs. The only logical place this money could come form, then, is the KUOW budget. This is because Roth, as director of both KUOW and its smaller neighbor down the hall, KCMU, has control over the allocation of funds for both stations.
"Other reliable sources say that during KUOW's winter fundraiser donations were requested to support 'University of Washington radio stations,' which implies both KUOW and KCMU. What other station would the

fundraiser benefit?"
Iverson suggests that KUOW money could be siphoned to KCMU as a subscriber contribution-- since it can legally be a subscriber to another station or KCMU could log such a transfer of funds as simply "donated services". He also reports that KUOW subscribers are beginning to put 2 and 2 together and they are not happy. Mike Fuller called me a couple of weeks ago and said that KCMU's second fundraiser since the troubles began has also been a disaster and that KUOW's recent fundraiser was not what it was expected to be.

p.5 reports that Seattle based Mudhoney raised $2,000 for CURSE at a February 10th benefit that was filmed by a documentary film crew working on a project about the CURSE/KCMU troubles.

Paul Pearson reports that a February 1, KCMU staff meeting was closed to the public. This for the first time in the station history. (Perhaps in violation of Washington States open meetings act??) New KCMU news staffer Lauren Gudzak assured CURSE members waiting outside after the meeting that the February 1 meeting would be the first of "only a few more" closed to the public. Ouch!

Randy Rowland writes on page 7 about the rumors that KCMU and the UW are planning to sue CURSE. He concludes writing:
"We invite KCMU management to make the rediculous mistake of suing its own listeners, volunteers and striking staff (ie. CURSE). It is exactly the volunteer DJs and listeners that make KCMU special. Without us, the station is nothing but a jumble of wires and a transmission tower. The mere notion of this threatened legal action shows just how removed from the people KCMU management is, and how isolated anddesperate they have become."

There is a 4 page interview with Riz Rollins, KCMU's former premeir DJ. hired to do drivetime shifts 5 days a week for $6 an hour. He talks about his resignation, his time in the drivetime spot and his troubles with a GM and PD that tried to tame his style and sway his broadcast philosophy. This interview really addresses some of the fundemental differences between those who are trying to tame community radio, make it more palatable to more people, and those who feel it is imperative to maintain the idealism of this kind of radio. These four pages are well worth the effort to secure a copy of CURSEword.

Last page runs a poem called Beatnik Sputnik, by Ricardo Love Wang that is dedicated to , "...the spirit of the old KCMU and KUGS, and those who intend to restore them to their original status.

A final brief suggests that CPB funding for World Cafe is about to run out and stations will soon begin paying a generous fee for the program. Anyone have any info on this??

More later...

## 371. Latest "Welcome to rec.radio.broadcasting" file.

Newsgroup: rec.radio.broadcasting
Date: 1993-03-22 05:40:00 UTC
From: rrb@airwaves.chi.il.us
Message-ID: <1993Mar22.054000.19542@gagme.chi.il.us>
Source record: 43559

Greetings readers of rec.radio.broadcasting.

Here is a brief synopsis of what rec.radio.broadcasting is about.

Basically, rec.radio.broadcasting (r.r.b) is dedicated to just what
the name implies, radio broadcasting. It differs from
rec.radio.shortwave in that we concentrate more on 'domestic'
broadcasting than on international (i.e shortwave).

By domestic, we mean broadcasts which are intended, primarily,for
reception in the same country/nation in which they originate. R.r.b
is an international newsgroup, though, and the term 'domestic'
should not be taken to imply 'USA' or even North American. Readers
in other nations are encouraged to participate.

********** Appropriate Subject Matter **********

Subjects which are appropriate are many. Basically, if it has to do
with broadcast radio, and not _specifically_ international
shortwave, it is welcome here. Occasionally an article which IS
primarily about shortwave will be posted if the subject seems broad
enough that the readership of r.r.b might be interested, or be able
to assist the poster in some way. We do not encourage articles
pertaining to television, except for the occasional article pertaining to
technical or engineering matters, and/or dealing with the
reception/transmission of the actual signal. Articles regarding
the 'content' or 'production' of television, are usually not posted.

Generally, if a subject 'seems' like it would be of interest to the
broadcasting community (which includes those involved in creating,
transmitting or listening to broadcast radio) will be published.
These subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters and interests.
3) DXing (long distance reception) on the standard broadcast bands
or (in rare cases) television bands.
4) Community broadcasting (including non-commercial or utility stations).
5) Pirate broadcasting (especially non-shortwave, domestic pirates).
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.
9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.

13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

****************************** Moderation ********************************

R.r.b is a _very_ loosely moderated group. Basically, the only articles which don't get through are ...

* Articles which are not on (or reasonably near) the stated charter and scope of the group (domestic radio broadcasting).

* Articles pertaining to 'non-broadcast' radio services, such as cellular, two-way, ham, citzens-band, and such.

* Articles that are too long for submission as-is. If your article is longer than 10k (10,000 bytes), consider splitting it into two parts, or better yet, edit it down to a more reasonable size. Check to see if you can eliminate any quoted text. If you believe that your article is of an especially urgent or inforamative nature, and you also feel that you cannot reduce the size without damaging the content, let me know and I will try to work with you.

* Articles which are merely multiple repetitions of an identical answer which has already been offered several times. Often these will be bundled together into a single article to conserve bandwidth and increase readability.

* Articles which contain 'miles' of quoted and multiple quoted text followed by a few lines or less of original text. Please edit quoted text to a minimum and try to adhere to the *50% rule*, that is 51 (or more) percent of original text to 49 (or less) of quoted text. If the thread is old, (not current) more quoted text is appropriate. Only the worst offenders are omited, usually I will edit quoted text myself, when I have time. If you feel the need to offer one or two sentence replies, consider e-mail. Conversely, if your e-mail reply contains information of potential interest to others in the group, consider posting it AS WELL as mailing it to the original poster. We can all benefit from good information.

* Articles which are unwarrantedly offensive, abusive or contentious for the sake of contention. Personal attacks and ridicule are considered such. Discussion, even argument, of issues and opinions are welcomed and encouraged. Flame-wars and such are not. We have discussions here, not shouting matches.

************ If your article is rejected for publication *************

If your article *is* rejected, you will be notified via e-mail with a form letter explaining why the article was rejected. If you post an article, and DO NOT receive such a reply, AND do not see your article posted within a few

days after sending it, please notify me via e-mail. Include your article, if you can with that letter. Occasionally e-mail and news software gets goofy, and an article gets lost. If you DO resend, be sure to mark your article as a 'repost'. Do not assume that your article was rejected, unless you receive a notification.

********** Internet Radio Journal: **********

R.r.b is also available in a digest form via e-mail. This is called the "Internet Radio Journal". If you, or a friend, does not get Usenet (or does not get rec.* groups) please feel free to subscribe to the Journal by sending mail to the Internet address of - journal@airwaves.chi.il.us -. The Journal is also available for 'bursting'or local distribution within a non-Usenet system. If you run such a system, and it is non-commercial (privately owned boards which are either free or charge a nominal 'cover' fee) you are welcome to receive the Journal for distribution within their system.

I am open to suggestions on how to improve this group. Send them via e-mail to wdp@airwaves.chi.il.us. Feel encouraged to post. The group is only as good as its contributors. I would like to extend a special invitation to the engineering and programming folks among us. I would love to see more technical postings. This is an area where I feel r.r.b could use some more input, but that's just me :-). The group is yours and what you make of it, that it will be.

********** Archives **********

The Internet Radio Journal is currently archived at 'deja-vu.aiss.uiuc.edu' and is available there for anonymous FTP. The digests are arranged in 'issue number' order and can be found in the directory '/misc/rec.radio.b-cast'. They are also seperated into three sub-directories. Issue 100 - 201, Issue 202 - present and special.issues. All Journals are in compressed form and older digests are stored in packs of two or three issues each. Newer ones are available seperately. We are open to other sites, perhaps a European one, which would like to offer the digests for FTP from their site. Please contact the moderator, William Pfeiffer, at wdp@airwaves.chi.il.us, if you run or know of such a site. Note: a site in Australia has expressed an interest in archiving the digests too. More on that when it becomes a reality.

**********

Thanks to all who have, and continue to, participate.

We now return you to your regularly scheduled newsgroup :-).

I don't know what station you listen to regularly, Mark, but I can tell
you my experience as a broadcast journalist here on the other coast.

At WBZ, a substantial portion of our news programming is devoted to
coverage of Beacon Hill (the Massachusetts state government), Boston
City Hall, and other area governments. We have three reporters out
on the street every day. One works early mornings, when most of our
elected officials are still asleep...and of the other two, one is almost
always on Beacon Hill or at City Hall. The one place WBZ maintains
a permanent satellite newsroom is in the basement of the State House.
We don't go out looking for scandals...we report on what's really
happening -- what bills are being proposed, who's testifying in
committee hearings, that sort of thing.

This sort of coverage is not unique to us. When I worked at WCAP
in Lowell, Mass., we had 2 full-timers and one part-timer in
our newsroom. The only stories we went outside to cover were
Lowell City Council and School Committee meetings, and town meetings
in the surrounding towns. If that's not coverage of our elected
officials, I don't know what is.

I realize New Englanders tend to be more interested in the
intricacies of their government than those in most other parts
of the country, but I think there's plenty of government
coverage to be found out there.

Scott Fybush -- fybush@world.std.com
I do not speak for WBZ in an official capacity.

## 373. Censorship. Some precedents.

Newsgroup: rec.radio.broadcasting
Date: 1993-03-22 15:07:04 UTC
From: kadie@cs.uiuc.edu
Message-ID: <1993Mar22.150704.27827@gagme.chi.il.us>
Source record: 43562

Surprisingly to many the law does not recognize a general right not to be offended. Instead, the Supreme Court justifies (rationalizes?) government censorship of radio and TV with a privacy argument. It says that radio and TV is pervasive, that it comes into *your home* without you being able to control it, therefore, the government must control it.

The reason we don't otherwise give the government authority to enforce some "right not to be offended" is because such authority would be easily abused. Here is some history on this topic:

According to _The First Amendment Book_ by Robert J. Wagman, 1991, p. 106: "In 1940 Walter Chaplinsky, a Jehovah's Witness, was distributing literature on the streets of Rochester, New Hampshire, when he created quite a stir by loudly telling everyone he encountered that organized religions are 'a racket' and by specifically condemning several major ones by name in great detail. He was arrested an eventually convicted under a state law that made it an offense to speak 'any offensive, derisive or annoying word to any person who is lawfully in any street or other public place'. When the case reached the Supreme Court in 1942 (_Chaplinsky v. New Hampshire_), the justices unanimously upheld the conviction and rejected Chaplinsky's claim that his words and actions were protected by the First Amendment...."

According to _American Constitutional Law_ by Ralph A. Rossum and G. Alan Tarr, 1983, p. 379:

"The Court has since [_Chaplinsky v. New Hampshire_] defined 'fighting words' narrowly. It is not enough that speech be offensive, or invite dispute, or provoke hostility among listeners: only fact-to-face person insults raise no First Amendment issues. Yet the difficulty of designing a statute confined to such insults has lead the Court to overturn convicts on overbreadth or vagueness grounds even when the speech at issue clearly constituted 'fighting words'"

In _Cohen v. California_, 1971 the Supreme Court restated the description of fighting words as "those personally abusive epithets which, when addressed to the ordinary citizen, are, as a matter of common knowledge, inherently likely to provoke violent action.
[...]
Finally, in arguments before this Court much has been made of the claim that Cohen's distasteful mode of expression was thrust upon unwilling or unsuspecting viewer, and that the State might therefore legitimately act as it did in order to protect the sensitive from otherwise unavoidable exposure to appellant's crude form of protest ... While this Court has recognized that government may properly act

in many situations to prohibit intrusion into the privacy of the home of unwelcome views and ideas which cannot be totally banned from the public dialog ... we have at the same time consistently stressed that 'we are often "captives" outside the sanctuary of the home and subject to objectionable speech.' ... The ability of government, consistent with the Constitution, to shut off discourse solely to protect others from hearing it is, in other words, dependent upon the showing that substantial privacy interest are being invaded in an essentially intolerable manner. Any broader view of this authority would effectively empower a majority to silence dissidents simply as a matter of personal predilections." ...

Here are some more quotes from _Cohen vs. California_ and related cases:

"In this regard, persons confronted with Cohen's jacket were in quite a different posture than, say, those subjected to the raucous emmissions of sound trucks blaring outside their residences [presumably a reference to the specific case of Kovacs v. Cooper (1949)]. Those in the Los Angeles courthouse could effectively avoid further bombardment of their sensibilities simply by averting their eyes. And, while it may be that one has a more substantial claim to a recognizable privacy interest when walking through a courthouse corridor than, for example, strolling through Central Park, surely it is nothing like the interest in being free from unwanted expression in the confines of one's own home...."

_Kovacs v. Cooper_ says:

"Section 4 of the ordinance bars sound trucks from broadcasting in a loud and raucous manner in the streets. There is no restriction upon the communication of ideas or discussion of issues by the human voice, by newspapers, by pamphlets, by dodgers. We think that the need for reasonable protection in the homes or business houses from distracting noises of vehicles equipped with such sound amplifying devices justifies the ordinance."

_Carey v. Brown_ (1980): "In sum, 'no mandate in our Constitution leaves States and governmental units powerless to pass laws to protect the public from the kind of boisterous and threatening conduct that disturbs the tranquility of spots selected by the people either for homes, wherin they can escape the hurly-burly of the outside business and political world, or for public buildings that require peace and quiet to carry out their functions, such as courts, libraries, schools, and hospitals.'"

[Moderator's Note: Great post, Carl. However, how does a sound truck blaring in the street (which could be said to be involuntary exposure) relate to a radio station (over which one would presumably have control)? Yes, it is true that one can often hear sound from another's radio, but shouldn't the person 'blaring' the radio be liable (as is the sound truck operator) instead of the radio station which has no control over how loud an individual might play his/her radio? I am not disputing your facts, Carl, just opening up

another can of worms for discussion. Bill]

My next article in Radio World (14 April) is on this subject.
I got a copy of the NAB filing with the OMB and talked with an NAB attorney about their filing. It seems to me that they had several minor objections that were valid, but they could have been taken care of by modifying the form. However, NAB argued that the whole "mail order inspection" should be thrown out, and the FCC has. It seems to me (JUST MY OPINION!!!) that NAB is interested in keeping the FCC from using efficient means to determine station compliance. It makes it easier for stations to hide violations. At the current rate of FCC inspections of broadcast stations, it'll take 30 to 40 years for them to visit them all. A mail order inspection sure makes sense to me!

|> this news from the rooftops yet? :-)

I can't speak for Scott but I wasn't getting any posts in this group for
about a month up until a couple of days ago. Scott is very much aware of
Stern's presence on 'BCN airwaves(we discussed Stern's arrival into the
Boston market thru e-mail when the news broke on a Monday of his debut
week. I got the news from a co-worker who is an ex-producer at 'BCN
and happens to be a good friend of Bradley Jay's. Bradley was told on
Monday(3/1/93) that he was fired from his daily 7-12 shift to make room
for Howie. Bradley is currently doing the weekends on 'BCN and looking
for a job somewhere else.)

(Ron Newman)rnewman@bbn.com writes :
>More likely that nobody in Boston really cares very much about,
>or for, this boring loudmouth. I hope, and expect, that he'll either
>be off the air soon or cut back to at most 1-2 hours a night. As it
>is, he's pre-empting all night-time music broadcasting on Boston's
>primary rock station. What a waste.

What do you mean by 'waste'? Night-time FM music scene has been a 'waste'
land way before Howard got here. His arrival doesn't really change anything
in terms of 'BCN's status as an AOR powerhouse. They may lose night-time
'music' listeners to 'CGY,'AAF,'ZLX,'FNX but they'll also gain a
whole new set of mostly younger male listeners in a 7-11 slot. And don't
forget that Boston area has a population of about 350,000 college students.
It's already quite obvious who 'BCN is trying to go after with all those
beer, car stereo , and skiing resort ads during Howard's show. The only
question that 'BCN and Infinity are concerned about at this point : how
large the new Howard fan-club in Boston really is? They'll find out in
a couple of months.

I figure that stations like 'CGY and 'AAF might gain a little bit at night,
but their core audience will remain the same(small) thru the most of
the day and most importantly,the morning drive-time. All these other
rock stations are reacting and not acting. They're putting up billboards
'MORE ROCK LESS TALK" but refuse to introduce anything daring or innovative
in terms of listenable DJs or good music programming at night or
at any point of a 24-hr broadcating day. Why do you think over 900 stations

changed their formats last year? Most PDs across the country, Boston included, (yet another station will make a format change here within 2 weeks) keep reacting to what someone else in the business is doing and keep copying someone else's sound and programming. Eventhough, I often disagreed with some moves 'BCN made over the years, I always consider them to be the most original and creative radio station in the field.

As far as I'm concerned,'BCN still holds all the aces in the Boston radio war for now. Very popular but aging DJ personalities (Charles Laquidara(AM drive),Ken Shelton (Mid-day),Mark Parenteau(PM drive)) and plenty of good rock music are still heard when it matters...Of course, like everything in life,it's all subject to change.

The verdict on Howard is still out but I predict that in the spring ratings he won't do as bad as most people around here think.

-Mark

# 377. WENZ Cleveland's "Music Movement" attempts to appease listeners

Newsgroup: rec.radio.broadcasting
Date: 1993-03-22 15:11:34 UTC
From: mac18@po.CWRU.Edu
Message-ID: <1993Mar22.151134.27991@gagme.chi.il.us>
Source record: 43564

WENZ in Cleveland began "The Music Movement" last Monday. This "movement" was sparked by nine months of listeners letter and phone comments about the quality of the station, and a rumor that the station was going to switch to a country format. The new PD Rick Michaels apparently spoke about the "movement" during the the weekend of the Blizzard. He said that the station had been building up an extensive modern music library, and that on Monday they would start broadcasting a less repetative playlist of music. The DJs would also say the artist and title of every song played. Michaels said that they do not want to switch to country, and that it is up to the listeners to say that they listen to the station and to spread the news about it.

Personally I haven't seen much of a movement yet...of course I'm listening on the weekends, so the music is generally much tamer. The DJs have become much more receptive to musical ideas on the telephone, by being much more honest and saying that they are currently not playing the song, and telling you who to call to get the song some airtime. It sounds to me like it's a despiration move by WENZ to stay alive in it's current format. The music seems to be shifting towards a WRDE (New York/Philadelphia) type style. I'll know that's the direction they want to go if they ever play Ween's Push the Lil Daisies. We'll see...

In <2MAR199317181506@zeus.tamu.edu> Lynn Marie Beechie wrote:

I know 1610 kHz is not a regular broadcast frequency but I can barely hear some religious station on there at night. I thought at one time I heard something that led me to believe it was coming from northeast Texas. Dr. Jean Scott has programming on here. If anyone has a clue, let me know.

Actually, 1610 kHz IS a regular broadcast frequency. Or it is NOW, anyway. The FCC has expanded the AM band, and it now encompasses 540 kHz all the way up to 1710 kHz. Stations are still farely rare on the expanded (1610 - 1710 kHz) frequencies. My last recollection was that there were five stations in that spectrum, all Class III Regional near 1,000 watts. I could, however, be mistaken on the last part.

-Wayne

[Moderator's Note: There is a relatively powerfun signal on 1610 from somewhere in the carribean with a brokered religious format. I think it is in the west Indies. I have heard it near Chicago when I get out of the shadow of our traveler's information stations. Bill]

>barry

Barry:

Bill Eisenhamer, here, Tech. Mgr. in San Diego. I have also had similar problems with trying to orderorr parts needed or even _NEW_ equipment, just to find out that the supplier cannot process because of past due invoices. It bothers me that a company will let that account just sit and not even inform the customer that there is a problem. When it comes to emergencies, how does one "pay" for their new parts when it is cash only, and ufront?

I do agree that stations should pay their bills promptly and should come up with a system that helps expedite orders that may have partial problems. For example, what I do to try to expedite orders is sign off invoices as soon as possible. If there is a dcrepancy in, say, the shipping cost/method, I will specifically state on the ioice not to pay x amount, but to make sure that the rest is paid, usually the equipment portion. That way a vendor will receive at least the payment for te equipme, and the lesser amount can be discussed/negotiated in due course.

Now I must admit that I do have to explain myself to the accounting dept., but at least I can get some action going and prevent some accounts from entering cash flow gridlock.

Bill

P.S I do enjoy many of the arcles you write for Radio World. And I hope this will show that there a some out here willing to discuss _RADIO_!

[Moderator's Note: Thanks, Bill (and Barry for fwding his email). Anyone else wanna discuss _RADIO_? We're all waiting. ]

Dear Mark, please elaborate on why -you- feel that the 7-11 FM
music scene at WBCN was a waste. You provide no justification for
your opinion.

Please do not compare WBCN to the previously listed stations. I don't
ask this because I feel that WBCN is so superior to them (although it is).
I ask this because WBCN does not play the same music as WCGY, WAAF,
WZLX, and WFNX and Therefore, cannot be compared in a manner in which you
have done. There are also many style differences that are irrelevant at
this point, but so noted.

>The only question that 'BCN and Infinity are concerned about at this

For the last few years, newly made AM radios _have_ been covering the extended band. This is the kind of thing that has to be done slowly, of course.

The FCC has regulations about commercially marketed radios, so that if you market something as an "AM radio" it has to get the entire AM broadcast band, and an "FM radio" has to get the entire FM broadcast band, etc.

cb@tamarack13.timbuk (Chris Brewster) writes:

>Why is FCC expanding MW broadcast when this medium seems to be in its death
>throes? I would have thought they would shrink it down to enough frequencies
>for the stations that are still making money.

If memory serves me correctly, the AM broadcast band was expanded to 1700 KHz at the World Administration Radio Conference (WARC) in 1979. It's only been fairly recently that AM radios in the U.S. have been expanded to accommodate the extra frequencies. If you notice, however, newer radios do go up to 1700 KHz. It will probably be many years before you'll hear new stations there, since most people still have older radios that stop around 1620 KHz.

I think it would be great to open the spectrum up to pirates. Actually, they would be licensed stations with approved equipment, but the licensing procedures would be relaxed and the power of the stations would be low. Such a thing could attract a lot of listeners.

>When they expand the band, how can stations in the new range get *any*
>listeners? Stereo AM went nowhere because no one had the receivers for it.

Not true. There were plenty of AM stereo receivers. Radio Shack had one, Sony had several (including a walkman that I still have), and my 1987 Celica has one. The problem, in my opinion, is that a single stereo format was not approved by the FCC. Several manufacturers (Motorola, Magnavox, Kahn/Hazletine, etc.) had systems, all of them incompatable with the other. Sony managed to come up with a chip to decode all the formats in the mid-80's, but by then it was too late.

With stereo and good receivers, AM can sound nearly as good as FM.

[Moderator's Note: ... especially the way FM is currently being clipped, compressed and processed. But the issue is kind of moot, DAB will blow all of them away.. Bill]

One of Portland's original am radio stations, KGW 620, is officially no more.

A couple years ago, they switched to an all-talk format. When that bombed, they stopped their original broadcasting and began simulcasting KINK FM 102.

KINK announced that KGW, as of March 1, was to be known as KINK-AM.

The end of a legend...

[Moderator's Note: Why on earth would a station with legendary 3 letter calls want to change them? Go figure. Bill]

From: mellob@cary101.its.rpi.edu
Message-ID: <1993Mar23.063630.9233@gagme.chi.il.us>
Source record: 43574

I live in the Boston are where we have a very powerful
AM station, WBZ on 1030 khz. It is by far the strongest
local AM station although I do not know their exact
power output (maybe you do?)

Anyways, while doing some random tuning with my
803A (using the stock wall transformer, to hell with
rechargable batteries), I picked up the WBZ broadcast
on 2060 khz! And it was lighting 2 out of my 5 signal
indicator lights.

I could also pull it out on 3090 khz and even on 4120 khz!
even though it granted no measurable signal strength.

I was only using a makeshift indoor dipole of random length.

Is this a characteristic of my receiver or could this station
broadcast with so much power that the harmonics of the
exciter cannot be supressed?

What do you think?

Has anybody else ran into this occurence with other stations?

Message-ID: <1993Mar23.063656.9259@gagme.chi.il.us>
Source record: 43575

o A report in this past Sunday's Champaign-Urbana News-Gazette indicates that the long-planned sign-on of WLTM-96.1/Rantoul, IL (originally targeted for July 1991) will finally occur on April 1. Mark Rollings, who manages WLTM as well as WZNF-95.3/Rantoul (classic rock) and WUFI-1460/Rantoul (all satellite talk), describes the format as "the right oldies from the '70s and '80s without the be-bop." The station will be known as "Eagle 96." Although WLTM, WZNF, and WUFI are all licensed to Rantoul, their studios are in Urbana.

o Rollings' WUFI, which dropped a CNN-all-news format earlier this year, has added national talk show hosts Alan Combs and Leigh Maribel (sp?) to its lineup which is anchored by Rush Limbaugh. They are broadcasting ABC news on the hour and their new slogan is "Your Source For Talk."

o And Rollings' popular WZNF will have a satellite some 35 miles away when the new WWDZ-94.9/Danville, IL takes to the air next week simulcasting the "Z-95" classic rock format.

o The market-leading WLRW-94.5/Champaign is now promoting itself as "The Mix."

o And a flap over the new slogan for album rock WPGU-107.1/Urbana has attracted some news coverage. The slogan "Either you rock or you suck" was deemed inappropriate for bus advertising by the Champaign-Urbana Mass Transit District. The bus cards are sporting the slogan...but over the word "suck" is a black box which says "Censored."

>of you have any ideas for alternatives to AP in the area of wire, computer
>software, and network? AP, as you know, is fairly inflexible on pricing .

> What alternatives have you discovered?

It depends what you need. If all you need is national and international
headlines updated once an hour or so, there are several services that
will do just fine. UPI is still out there, and willing to negotiate
prices. I last encountered them about 6 months ago, and their service
was adequate, if occasionally spotty. UPI also offers a Mass. state
wire; again, adequate but certanly inferior to the AP offering.

If your wife's stations are ABC affiliates, the ABC Newswire service
is a decent one. WBZ uses it as a supplement to AP. They're actually
faster than AP on certain national stories, and their hourly updates
are of excellent quality. Their state coverage is weak.

Zapnews is now teamed up with CBS Radio. They offer a service
delivered by FAX, and I think they're now available via computer
as well. I have no personal experience with them. I do know how they
get their Mass. news, and while I can't say much about it, let's
just say it almost ensures that whatever state news they run is
at least 18 hours out of date.

Reuters is out there as an independent service (they're also part
of the ABC service), but from what I've heard, their costs are
comparable to AP.

As for AP, the reason they cost so much is because as a nonprofit
cooperative, they apparently CANNOT negotiate price. I have on
good authority that they ARE willing to negotiate on matters such
as software and hardware to help close a deal.

At WBZ, we have AP Broadcast and Print services, along with ABC
Newswire, all on a Basys system. It's a wonderful resource, and
absolutely essential for an all-news operation, but it's certainly
overkill for a smaller shop.

Just out of curiosity, what are the stations in question?

Scott Fybush -- fybush@world.std.com

## 390. Re: AM broadcast harmonics?

Newsgroup: rec.radio.broadcasting
Date: 1993-03-25 06:01:24 UTC
From: Will Martin <wmartin@STL-06SIMA.ARMY.MIL>
Message-ID: <1993Mar25.060124.20372@gagme.chi.il.us>
Source record: 43580

DXing AM-stations' broadcast harmonics is a recognized sub-speciality among DXers. If you listen to Hauser's World of Radio, for example, you'll often hear him mention such catches. He and some other DXers often check for very high-numbered harmonics in the upper-20/lower-30's MegaHertz ranges.

Some DX clubs and some DXers actively dislike this, for reasons I've never been able to comprehend. It is possible to receive a BCB station via its harmonic when the base frequency is masked by others on the same channel.

One major question in this area is whether or not is is "proper" to report the harmonic reception to the station to try to get a QSL. The argument here is that reporting an harmonic is likely to impel the station to get its engineers on the job to clean up the signal and reduce or eliminate (as far as possible) the harmonic radiation. This means that the reporter is spoiling the game for other DXers who would want to receive the harmonic. Then, again, cleaning up the RF spectrum is a good thing, and spurious radiation should be eliminated. Of course, many harmonic-generating stations, especially Latin American ones operating marginal equipment, will never take any such clean-up actions; they don't have the time, money, or manpower (or sometimes the expertise) to do it. But then they are not too likely to QSL, either...

Another aspect is whether the signal is *really* radiated from the station's transmitter and antenna, or whether it is a receiver-produced artifact, or whether some other phenomena, like rectification and re-radiation from some structure, is the cause. It's no big deal to get multiple harmonics from a local 50kW clear-channel; as others have already mentioned, the dbs of suppression of low-numbered harmonics from a powerful transmitter still leaves a respectable amount of power going into those harmonics. Given the right conditions, a watt or less can be heard world-wide. So a local can both be putting out easily-detected real harmonics, and also swamping the front end of your receiver and producing spurious signals there. Sometimes it is hard to distinguish these. A distant staton's harmonics are more definitely real than a local's. (They're more interesting and a better catch, too, of course.)

Regards, Will

## 391. Radio over Cable TV wire

Newsgroup: rec.radio.broadcasting
Date: 1993-03-25 06:01:25 UTC

Message-ID: <1993Mar25.060125.20411@gagme.chi.il.us>
Source record: 43579

Hello folks,

One of the local radio stations here in the Boston Metro area (WFNX 101.7) has made their broadcast available over some of the cable TV provider wires here. Instead of a picture, you get a stereo broadcast as clear as that originating at the studio.

There are some truly wonderful radio stations around the world I would love to listen to with that kind of clarity (not to mention the ease with which one can pipe a broadcast from VCR to DAT etc). KSJS in San Jose, CA is one example.

The local station says that the consumer is in the driver's seat on this one. You, radio consumer, must ask (in quantity) for the service and they (cable provider) are required to allocate a channel, at least according to the contracts cut around here.

All that said, I am wondering if anyone else has heard of this kind of delivery mechanism and more importantly, any thoughts on the impact on RADIO BROADCASTING of this development? I mean, just think what happens to radio when cable TV is all digital and the potential exists for 500 channels interactive. Home micro-radio station, anyone?

Your kind thoughts are appreciated!

==========////////========

All the Voices

----------

By Bruce Girard

AMARC's proposal for a world with all the voices is
both a challenge and a stubborn gamble. It is a journey
against wind and tide. We want not only the many voices
of the McBride Commission's report. We want all the
voices. The voices of every nation; the voices of every
culture; the voices of every race; the voices of all
men and women.

Rafael Roncagliolo, director Instituto para America Latina
Keynote speech, AMARC 5, August 24, 1992 Oaxtepec, Mexico

The new world information and communication order was a popular topic for discussion in the early 1980s. MANY VOICES ONE WORLD, the report of the McBride Commission, was published in 1980. It sparked an intense and highly polarized debate in international forums about the problems and injustices of international communication structures and practices; and about how to go about changing them.

The West, led by the United States, argued that the right to communicate was an individual right best guaranteed by market forces. Developing countries and the non-aligned movement, on the other hand, pointed to their experience of market forces in the international economic sphere -- widespread poverty, increased economic dependence, and extreme inequalities between the so-called First and Third Worlds. The social objectives of communication had to be primary, they argued. The right to communicate was a collective right and as such the state was in the best position to guarantee it.

It was in the midst of this debate, in 1983, that the first world community radio conference was organized and the World Association of Community Radio Broadcasters' proposal for a new communication order was born -- a communication order that includes not only the voices of business and government but, ALL THE VOICES -- "The voices of every nation; the voices of every culture; the voices of every race; the voices of all men and women."

A FORUM FOR THE DEMOCRATIZATION OF COMMUNICATION

One of the things that participants at AMARC's first world conference discovered was that they had much to learn from each other. Broadcasters from places as diverse as Europe, Africa and Latin America discovered that they shared the objective of democratizing radio; of making use of its potential as a medium of social change, cultural development and democratisation.

They also discovered that they faced common problems that often had common solutions. Community broadcasters in Europe had developed "radio bingo" as an important source of financing. Indigenous broadcasters in Canada's north had developed inexpensive low-powered transmitters and studio kits that were ideal for rural areas of Africa and Latin America. And Latin America used participatory radio practices more audacious and effective than had ever been thought possible.

Since the first conference AMARC has worked to provide a forum for the democratization of communication. There have been a total of five world conferences, the most recent held in Mexico last August. Following the third, in Managua in 1988, a permanent secretariat was established in Montreal, Canada.

AMARC is now an international non-governmental organization serving the popular radio movement. It is a network for exchange and solidarity among community broadcasters and its work focuses on coordinating and facilitating cooperation and exchange among broadcasters worldwide. It is directed by a ten-member Board of Directors with representation from all continents. The following is a brief presentation of some of AMARC's projects and plans.

INTERADIO

Published three times a year, INTERADIO is a newsletter exclusively devoted to community radio. It features news, profiles of radio projects, technical tips and reviews, and information about AMARC activities. It is distributed in Spanish, English and French to AMARC members and to a total of five thousand individuals and organizations around the globe.

RESEARCH AND PUBLISHING

AMARC has published a number of studies, conference reports, articles as well as a book.(1) Research and publishing is an important activity and plans are to expand it with the inauguration of a publication series about community radio that will commission research and publications on a wide range of topics.

THE EMERGENCY ACTION NETWORK

The Emergency Action Network is an initiative of community broadcasters who attended AMARC 5 in Mexico. The main purpose of the network is to mobilize the worldwide community radio movement in solidarity with community radio broadcasters whose right to freedom of speech is threatened. The network was set up in January 1993 and distributed its first Action Alert in February when a German community radio broadcaster was sentenced to four years in a Turkish prison for interviewing members of the Kurdish Workers Party, considered a "terrorist" organization by the government of Turkey.

THE WOMEN'S NETWORK

AMARC's Declaration of Principles makes specific recognition of the "role of women in establishing new communication practices". The Women's Network was established by women attending AMARC's fourth world conference in 1990. Its objective is to promote exchange and solidarity among women working in alternative radio projects. In 1992 AMARC's bylaws were changed to reflect the importance of this network and one of the vice-presidential positions was designated vice-president for women. Maria Victoria Polanco, a Colombian, currently holds this position.

OTHER NETWORKS

Two more recent initiatives are seeking to establish networks similar to the Women's Network. The new networks will be for indigenous peoples and for youth. The Bolivian Cancio Mamani Lopez was elected to AMARC's Board to help set up the indigenous network.

REGIONAL OFFICES

While AMARC's Montreal-based secretariat coordinates work on a worldwide level, regional offices can play an essential role of local promotion and coordination of exchange projects. The Latin American office in Lima is one of the most dynamic centres of activity. AMARC and the Interafrican Centre for the Study of Rural Radio in Ouagadougou (CIERRO), a partner organization in the African country of Burkina Faso, are in the process of establishing a regional office for Africa. A European office is being set up in cooperation with the Community Radio Association in the United Kingdom.

A POPULAR RADIO NEWS SERVICE

AMARC is currently working on a project to make a popular radio news service available to its members. The first phase of this project will see the service made available in Spanish to radio stations in Latin America and English and French services will be available shortly afterwards.

ANOTHER CONFERENCE

The Sixth World Conference of Community Radio Broadcasters will be held in Africa in early 1995. This will be the first time an AMARC conference will be held in Africa and the decision to hold it there reflects the democratization that is taking place on the continent which has seen the first independent community stations set up in a continent where state monopolies have been the rule.

CONCLUSION

In the ten years since its first world conference the World Association of Community Radio Broadcasters has attempted to make a contribution to the democratization of communication and to what might be called a new LOCAL information and communication order, one that recognizes the importance of democratizing the airwaves in order to democratize society at large.

>all of them away.. Bill]

What makes you think that DAB will improve anything? If DAB is suddenly introduced on today's market, what we're going to have will be heavily compressed, clipped, eq'ed and distorted digital audio. Technology is not a substitute for attention to sound quality. Unless people start caring about how their stations sound, no new broadcasting method in the world is going to help us one bit. Personally, I'd really like to see DAB systems, but if we can't get our own houses in order now, why should we expect to be able to keep a new one in order?

[Moderator's Note: I am not an engineer, but my understanding is that a lot of the compression abd clipping is done to boost loundess and clean up the noisy edges of an analog stations coverage. I also understand that DAB will be more immune to analog interference, and loudness is controlled differently in the digital domain than analog. But, then again, when FM was younger, they were the bastions of quality hi-fi music. Too bad that is no longeer the case. Bill]

From: john@zygot.ati.com
Message-ID: <1993Mar25.060702.20717@gagme.chi.il.us>
Source record: 43583

Somehow I cannot get all worked up about stations suddenly discovering that they cannot get parts at 3AM because of past due invoices. As a supplier of services, the only recourse that I have against stations that cannot bring themselves to pay their bills is the withholding of those services. Likewise, I am sure, for materials suppliers.

I have been "stiffed" on rare occasions by flaky stations. Down the road, one or another of those stations has had the nerve to call with "an emergency". At that time I bring up some past due balances. "But this is an EMERGENCY!!" My usual tactic is to require payment in full of the past due balance plus a deposit on pending work. If the station wants to go elsewhere for service, fine. But the engineering community is tight enough that someone would have to be really hungry to fool with a flake.

In short, I have absolutely no sympathy for any station that does not pay its bills. If a supplier brings up past due amounts concerning a station with whom I happen to be providing services for, I pass it on to accounting and go back to bed. I will not beg on behalf of a flake.

[Moderator's Note: John, I may be mistaken (there's always a first time) but I believe that the original poster was complaining about the fact that the supplier held, and did not ship, an order without telling the person about the embargo, until the customer called to inquire about the hold-up. I got the feeling that he did not know about the past bill, so he was upset over the company not telling him the situation. Bill]

All the Voices

----------

By Bruce Girard

AMARC's proposal for a world with all the voices is
both a challenge and a stubborn gamble. It is a journey
against wind and tide. We want not only the many voices
of the McBride Commission's report. We want all the
voices. The voices of every nation; the voices of every
culture; the voices of every race; the voices of all
men and women.

Rafael Roncagliolo, director Instituto para America Latina
Keynote speech, AMARC 5, August 24, 1992 Oaxtepec, Mexico

The new world information and communication order was a popular topic for discussion in the early 1980s. MANY VOICES ONE WORLD, the report of the McBride Commission, was published in 1980. It sparked an intense and highly polarized debate in international forums about the problems and injustices of international communication structures and practices; and about how to go about changing them.

The West, led by the United States, argued that the right to communicate was an individual right best guaranteed by market forces. Developing countries and the non-aligned movement, on the other hand, pointed to their experience of market forces in the international economic sphere -- widespread poverty, increased economic dependence, and extreme inequalities between the so-called First and Third Worlds. The social objectives of communication had to be primary, they argued. The right to communicate was a collective right and as such the state was in the best position to guarantee it.

It was in the midst of this debate, in 1983, that the first world community radio conference was organized and the World Association of Community Radio Broadcasters' proposal for a new communication order was born -- a communication order that includes not only the voices of business and government but, ALL THE VOICES -- "The voices of every nation; the voices of every culture; the voices of every race; the voices of all men and women."

A FORUM FOR THE DEMOCRATIZATION OF COMMUNICATION

One of the things that participants at AMARC's first world conference discovered was that they had much to learn from each other. Broadcasters from places as diverse as Europe, Africa and Latin America discovered that they shared the objective of democratizing radio; of making use of its potential as a medium of social change, cultural development and democratisation.

They also discovered that they faced common problems that often had common solutions. Community broadcasters in Europe had developed "radio bingo" as an important source of financing. Indigenous broadcasters in Canada's north had developed inexpensive low-powered transmitters and studio kits that were ideal for rural areas of Africa and Latin America. And Latin America used participatory radio practices more audacious and effective than had ever been thought possible.

Since the first conference AMARC has worked to provide a forum for the democratization of communication. There have been a total of five world conferences, the most recent held in Mexico last August. Following the third, in Managua in 1988, a permanent secretariat was established in Montreal, Canada.

AMARC is now an international non-governmental organization serving the popular radio movement. It is a network for exchange and solidarity among community broadcasters and its work focuses on coordinating and facilitating cooperation and exchange among broadcasters worldwide. It is directed by a ten-member Board of Directors with representation from all continents. The following is a brief presentation of some of AMARC's projects and plans.

INTERADIO

Published three times a year, INTERADIO is a newsletter exclusively devoted to community radio. It features news, profiles of radio projects, technical tips and reviews, and information about AMARC activities. It is distributed in Spanish, English and French to AMARC members and to a total of five thousand individuals and organizations around the globe.

RESEARCH AND PUBLISHING

AMARC has published a number of studies, conference reports, articles as well as a book.(1) Research and publishing is an important activity and plans are to expand it with the inauguration of a publication series about community radio that will commission research and publications on a wide range of topics.

THE EMERGENCY ACTION NETWORK

The Emergency Action Network is an initiative of community broadcasters who attended AMARC 5 in Mexico. The main purpose of the network is to mobilize the worldwide community radio movement in solidarity with community radio broadcasters whose right to freedom of speech is threatened. The network was set up in January 1993 and distributed its first Action Alert in February when a German community radio broadcaster was sentenced to four years in a Turkish prison for interviewing members of the Kurdish Workers Party, considered a "terrorist" organization by the government of Turkey.

THE WOMEN'S NETWORK

AMARC's Declaration of Principles makes specific recognition of the "role of women in establishing new communication practices". The Women's Network was established by women attending AMARC's fourth world conference in 1990. Its objective is to promote exchange and solidarity among women working in alternative radio projects. In 1992 AMARC's bylaws were changed to reflect the importance of this network and one of the vice-presidential positions was designated vice-president for women. Maria Victoria Polanco, a Colombian, currently holds this position.

OTHER NETWORKS

Two more recent initiatives are seeking to establish networks similar to the Women's Network. The new networks will be for indigenous peoples and for youth. The Bolivian Cancio Mamani Lopez was elected to AMARC's Board to help set up the indigenous network.

REGIONAL OFFICES

While AMARC's Montreal-based secretariat coordinates work on a worldwide level, regional offices can play an essential role of local promotion and coordination of exchange projects. The Latin American office in Lima is one of the most dynamic centres of activity. AMARC and the Interafrican Centre for the Study of Rural Radio in Ouagadougou (CIERRO), a partner organization in the African country of Burkina Faso, are in the process of establishing a regional office for Africa. A European office is being set up in cooperation with the Community Radio Association in the United Kingdom.

A POPULAR RADIO NEWS SERVICE

AMARC is currently working on a project to make a popular radio news service available to its members. The first phase of this project will see the service made available in Spanish to radio stations in Latin America and English and French services will be available shortly afterwards.

ANOTHER CONFERENCE

The Sixth World Conference of Community Radio Broadcasters will be held in Africa in early 1995. This will be the first time an AMARC conference will be held in Africa and the decision to hold it there reflects the democratization that is taking place on the continent which has seen the first independent community stations set up in a continent where state monopolies have been the rule.

CONCLUSION

In the ten years since its first world conference the World Association of Community Radio Broadcasters has attempted to make a contribution to the democratization of communication and to what might be called a new LOCAL information and communication order, one that recognizes the importance of democratizing the airwaves in order to democratize society at large.

>all of them away.. Bill]

What makes you think that DAB will improve anything? If DAB is suddenly introduced on today's market, what we're going to have will be heavily compressed, clipped, eq'ed and distorted digital audio. Technology is not a substitute for attention to sound quality. Unless people start caring about how their stations sound, no new broadcasting method in the world is going to help us one bit. Personally, I'd really like to see DAB systems, but if we can't get our own houses in order now, why should we expect to be able to keep a new one in order?

[Moderator's Note: I am not an engineer, but my understanding is that a lot of the compression abd clipping is done to boost loundess and clean up the noisy edges of an analog stations coverage. I also understand that DAB will be more immune to analog interference, and loudness is controlled differently in the digital domain than analog. But, then again, when FM was younger, they were the bastions of quality hi-fi music. Too bad that is no longeer the case. Bill]

## 405. Re: Suppliers Stiffing Stations - and vice-versa

Newsgroup: rec.radio.broadcasting
Date: 1993-03-25 06:34:29 UTC
From: john@zygot.ati.com
Message-ID: <1993Mar25.063429.21430@gagme.chi.il.us>
Source record: 43592

Somehow I cannot get all worked up about stations suddenly discovering that they cannot get parts at 3AM because of past due invoices. As a supplier of services, the only recourse that I have against stations that cannot bring themselves to pay their bills is the withholding of those services. Likewise, I am sure, for materials suppliers.

I have been "stiffed" on rare occasions by flaky stations. Down the road, one or another of those stations has had the nerve to call with "an emergency". At that time I bring up some past due balances. "But this is an EMERGENCY!!" My usual tactic is to require payment in full of the past due balance plus a deposit on pending work. If the station wants to go elsewhere for service, fine. But the engineering community is tight enough that someone would have to be really hungry to fool with a flake.

In short, I have absolutely no sympathy for any station that does not pay its bills. If a supplier brings up past due amounts concerning a station with whom I happen to be providing services for, I pass it on to accounting and go back to bed. I will not beg on behalf of a flake.

[Moderator's Note: John, I may be mistaken (there's always a first time) but I believe that the original poster was complaining about the fact that the supplier held, and did not ship, an order without telling the person about the embargo, until the customer called to inquire about the hold-up. I got the feeling that he did not know about the past bill, so he was upset over the company not telling him the situation. Bill]

Okay, gang. Here's the latest plea from a blown-out DJ needing gainful employment and a new source of carts to steal :-)

HELP! The dust settled, the consultant left town and I'm on the street!

I was doing Middays, Production director, and engineering at WDJB B-106 in Fort Wayne, Indiana! Now i'm looking at soap operas all day long!

The Resume:

On the air at:

WRBI/Batesville, IN
WKBV/WFMG, Richmond, IN

WPHR "Power 108" /Cleveland
WGAR / Cleveland
WRQN "93Q" Toledo
KCDQ "CD102" Odessa/Midland, Texas
WDJB "B106" / Ft. Wayne, IN

Engineering: Duties at WPHR (assisted installation 3 studios and STL )
WGAR(assisted install 6 studios and sattelite)
WRQN (maintenance and mobile studio)
KCDQ( Chief Engineer)
WDJB (Assistant Chief Engineer)
Applied Communication Technologies / Ft. Wayne, IN (international rf and hardware consultancy in Broadcast, Cellular, public safety, sattelite, industrial and just aboiuyt everything else involving getting a message from here to there) Technician

4 years 8-track production experience
Killer tape and resume available
Call: 219/432-4300 or reply via E-mail to author of this message

Thanks, and keep rockin'!!

Paul Phillips
AKA "the big P. P. "

## 409. Re: Radio over Cable TV wire

>Hello folks,
>
>One of the local radio stations here in the Boston Metro area (WFNX 101.7)
>has made their broadcast available over some of the cable TV provider
>wires here. Instead of a picture, you get a stereo broadcast as clear as
>that originating at the studio.
>
>There are some truly wonderful radio stations around the world I would
>love to listen to with that kind of clarity (not to mention the ease with
>which one can pipe a broadcast from VCR to DAT etc). KSJS in San Jose, CA
>is one example.
>
>The local station says that the consumer is in the driver's seat on this
>one. You, radio consumer, must ask (in quantity) for the service and they
>(cable provider) are required to allocate a channel, at least according to
>the contracts cut around here.
>

CATV systems have carrier FM stations for a long time! Generally
the local FMs are carried using a hetrodyne converter to move them up
or down a couple channels so you don't get multipath between the signal
coming down the cable and the over the air signal. Many CATV systems also
import FM signals by satellite or terrestrial microwave. Our CATV system,
for example, carries KUSC out of Los Angeles and WFMT out of Chicago.
These signals are received at the CATV head end off the microwave or
satellite receiver, then dumped into a cable modulator, a very low power
FM transmitter. I installed a system for a somewhat local FM that was
not receivable at the head end due to intermod. We put a receiver
in downtown San Luis Obispo, then ordered phone lines to the head end.
Up there, it drives another cable modulator. The college where I teach
has also done something similar. They got phone lines to the CATV
companies local origination studio, then run on a microwave subcarrier
up to the head end. The microwave is now full, so others have to run
phone lines or their own radio link to the head end. Finally, I've
suggested this to AM stations in the area. They could get better night
coverage in homes by putting thier signals on FM on the CATV.
Note, however, that there is a limit to the number of FM signals
the CATV companies link out to the differenc communities (their AML link)
can handle. As they add more, all the others get noisey.
Finally (again), there's also digital radio distributed by CATV,
but that's another story!

Harold

## 411. Non-com station Operating Hours

Newsgroup: rec.radio.broadcasting
Date: 1993-03-26 06:04:41 UTC
From: WEOS-FM <BLACK%HWS1%HWS.BITNET@VM1.NoDak.EDU>
Message-ID: <1993Mar26.060441.15304@gagme.chi.il.us>
Source record: 43599

I have had a few requests about station operting hours for FM noncommercial
stations. Here is what the rules state:
73.561 from CFR 47

All non commercial FM stations are licencensed for unlimted hours EXCEPT
stations that share time with another station.

Minimum Hours: ALL noncommercial FM stations must broadcast a minimum of
36 hours per week, at least 5 hours a day, 6 days of the week. However,
stations that are licensed to educational institutions do not have to
broadcast on Saturday or Sunday, and Do not have to broadcast on OFFICIAL
school vaction or recess periods.

If your station does not operate at least 12 hours a day, 365 days a year, it
ma
y be subject to Time sharing, if an applicant files to doso.

If you depart from either a limited or full schedule, you need to notify the
FCC of this by the 10th day after this is made, indicating why. These are for
things like transmitter burns up, antenna falls down, and you are going to
be off the air or deviate from your "Normal" schedule for awhile.
At the very least, unless you share time, you have to be on the air, if
a school station, M-F, at least 36 hours during that time period and on the
air each day. Only Break periods are valid. If your school has a Summer Session,
this may obligate you to a Summer schedule as well.

If you have a problem determining this, consult your communications attorney,
or
it may not even hurt to ring up the FCC. In any event, I hope that gives some
more depth into it.

## 412. More on KLOL/WCKW simulcast

Newsgroup: rec.radio.broadcasting
Date: 1993-03-26 06:06:18 UTC
From: "Chip (C.D.) Kelley" <chipk@bnr.ca>
Message-ID: <1993Mar26.060618.15373@gagme.chi.il.us>
Source record: 43450

Here is the article on AOR KLOL-101.1 Houston syndicating their morning show.

"KLOL To Syndicate Stevens and Pruett 6 a.m. show"
--HOUSTON CHRONICLE 3/17/93

Starting April Fool's Day, the Stevens and Pruett show on KLOL (101.1-FM) will beam its zingers and singers to other radio markets - and that's no fooling.
KLOL station manager Pat Fant said the irreverent morning-drive show featuring Mark Stvens and Jim Pruett will be simulcast daily on New Orleans' WCKW (92.3-FM) [ WCKW-FM is licensed to La Place LA with a nearly 2000' tower and 100 kw and serves both New Orleans and Baton Rouge radio markets - Chip ] and in other markets as stations are lined up.
Or, as Fant says, "The Groove Dog Radio Network is on the air."
KLOL is syndicating the 6-10a.m. show itself. It will be transmitted via a phone-line point-to-point data link conveying digital information. It's a trend for the future, Fant said.
"The lack of proven morning-show talent has driven broadcasters to the reality of syndicated morning shows," he said. "There just aren't a lot of Stevens and Pruetts out there.
"If your're in New Orleans and want a great morning show, this is a better option than trying to grow your own or to find, if you can, a great morning show."
WCKW general manager Sid Levet said the station cancelled its own morning show to make room for Houston's duo. The former morning DJ has been made promotions director.
"This is a first for us, too," Levet said. "Stevens and Pruett have a track record and proven staying power. They will be able to come in and hit the ground running."
KLOL also is negotiating with other stations, all in smaller markets than Houston, the 10th larget market for Arbitron ratings. (New Orleans is 38th.) Fant said some stations expressing interest are in the Top 20.
WCKW is a classic rock station, while KLOL plays album rock. But Fant said the show won't alter its music programming. Other stations "will take the music we feed and work around it," he said.
However, he doesn't expect the show to be picked up by non-rock stations.
As for mixing formats in New Orleans, Levet said, "We think it'll work - Stevens and Pruett in the morning, and classic rock all day."
The show won't change significantly on April 1, Fant said. During each hour, there will be breaks for affiliates to air market-specific features and commercials.
"The only thing that'll change is the arrangement in the hour of various programming elements," Fant said, such as breaks for news, sports, weather,

and traffic. "The commercials will be arranged in the breaks to accommodate other markets."
If the show is sold to markets in the Eastern time zone, Fant said, an hour probably will be added starting at 5 a.m. That way, the show's feed could start at 6 a.m. Eastern time, the normal morning-drive hour to start.
The broadcast team will continue talking about Houston on the air, Fant said, but probably will expand references to include affiliate cities.
"We want to learn the other markets and incorporate their interests and assist them promotionally," Fant said.
Stevens and Pruett may make public appearances in New Orleans, and Levet hopes they'll broadcast live from the city during special events such as Mardi Gras.
Fant believes this is the first such houston show to be offered in other states as a syndicated simulcast in a live daily feed.
"It will mean lots of work, but we're very excited about it," he said.

---

Stevens and Pruett worked here in Dallas on KEGL-97.1 before going to KLOL. Former KTKS-106.1 "Kiss" Dallas morning team Walton and Johnson are trying to syndicate their show. W & J moved back to New Orleans (to CHR WEZB-97.1 "B97") after KTKS switched to new age/jazz KOAI (which is now CHR KHKS "106.1 Kiss FM"). According to various articles I've read, they've put up a $1000 "finder fee" to help them locate stations. So New Orleans could become the home of 3 syndicated morning shows - S & P on WCKW-FM, Howard Stern on WRNO-99.5, and W & J on WEZB.

## 414. New radio format

Newsgroup: rec.radio.broadcasting
Date: 1993-03-26 06:11:48 UTC
From: hhallika@oboe.calpoly.edu
Message-ID: <1993Mar26.061148.15625@gagme.chi.il.us>
Source record: 43453

A local AM station has a new format and a new use for 900-
lines. The station is calling itself "Radio Home Shopping" and
running ads 24 hours per day. I seem to recall hearing of a
McLendon station (I think they used the call KADS) doing
something similar in the 1960s. What's unique about this station
is that it's all automated. A member of the public calls a 900
number and reads his/her ad into the system. Various ad
classifications are available, which determines how the ads are
grouped on the air (a little like classified ads, but the
classifications seem rather broad). Each ad runs a bunch of
times. I imagine the system automatically times out the ads
after they've run for so many hours or so, but I don't know. I
listened to it for a while last night. Most of the ads were
individuals buying or selling garage sale type items, but there
were a few business advertising their products and services, a
few employment ads (an alarm company looking for an installer,
someone looking ofr a diesel mechanic, someone looking for a job
posted his "radio resume").
The ads run $3.00 for the first minute and $2.00 for each
additional minute.
The station is the first commercial station I worked for,
back in 1970. They are still running the Bauer 707 transmitter
that we built as a kit. I spoke with the owner of the station
(who I've known since the early 70's) yesterday. He describes it
as "a different kind of radio" where you have to get used to a
little dead air and some clicks and pops. Actually, the system
seemed to do real well. Listening to the station is a little
like getting home and pressing the playback button on your
answering machine, except that you've got hours of messages.

[Moderator's Note: I imagine that the ads must be screened. Otherwise
everything from profanity to drug deals could be parlayed. Interesting
format. Wanna send me an aircheck? Bill]

>
>1. What do you sell? To whom? Do you reserve certain frequencies?
> Are there certain restrictions?

The right to broadcast at certain frequences over certain areas. To
pretty much anyone with money. Yes, as government property, as public
parks, etc. I don't know what you mean.

> Different allocations of frequencies, modulations, specs requires
> certain bandwidths, etc....which requires a lot of technical support
> and/or supervision....

Different allocations of land and land rights (mineral, water, etc)
require a lot of technical support and/or supervision.

> the problem with government deregulation is
> that these aspects are overlooked,

Real estate is deregulated in the U.S. (at least compared
to broadcast rights. In real estate these issues are not over
looked.

> and somebody looking for a profit
> who doesn't know squat about broadcasting or the technical parameters
> will not know what s/he is getting into....
> At the very least, s/he will lost money.

I doubt that this will be a problem. I expect buyers will be cautious.

> More often such people tend
> to interfere with other broadcasters because they only see $$$ and don't
> know about RF modulation, frequency varience, wattage and power, etc.

That is what tresspass law is for. Before FCC regulation there was at
least one court case that used tresspass law to enforce broadcast
rights (see _Freedom, Technology, and the First Amendment_ by Jonathan
W. Emord (1991)).

I wish broadcasters could go to a local court now. The FCC seems very
unresponsive to local interference cases.

> A radio "frequency" is not an isolated cubby-hole that you can do what
> you want with without affecting other frequencies.

True, but then neither is real estate (esp. in the city). The deeds
should spell out what broadcast rights are owned.

>2. What about public broadcasters (i.e. non-commercial networks such as
> NPR, Pacifica, or independent & college stations).

They would have squatter's rights.

> If frequencies are
> auctioned off to the highest bidder, chances are that non-profit org-
> anizations with little funding will not be able to compete with wealthy
> corporations and individuals, although these stations often provide
> viewpoints and information not found on stations with $$$ in their eyes.

I think cost of broadcast rights would be lower than it is now because
the FCC enforced monopoly would be broken. I think more viewpoints
would be heard because 1) costs would be lower 2) broadcast rights
could be better subdivided (via low power, time sharing, directional,
digital).

>3. What's to prevent someone from owning a frequency for several years
> without utilitizing it? (i.e. the way some foresighted people will
> buy real-estate cheaply and wait for it to become prime property
> many years down the line & sell it for a nice profit)

Property taxes. The revenue the owner would loose by not at least
reading. (What prevents most Manhattan real estate owners from owning
real estate for several years without utiliting it?)

>4. IS THIS REALLY NECESSARY? With new cable DMX technologies comming out,
> one may not need to own a frequenciy but instead a satellite channel to
> broadcast to an immense market of cable DMX listeners....
>
> It would be the equivalent of getting the government to sell s large
> bit of "surplus" land for a quick financial fix and suddenly the dev-
> elopers' either don't want the land or have nothing to do with it
> because there's little or no market for it.
[...]

The current sitution is like having the government own *all the land
in the nation* for the "public trust".

The Administration is currently not planning on selling it all off,
only some underused parts for which there is plenty of market. I think
those parts would still be under quite a bit of FCC regulation.

[Moderator's Note: Why do I get the impression that Carl is heavily into
real estate? :-) Bill]

From: Bob Longo <longo@sfpp.com>
Message-ID: <1993Mar26.061412.15695@gagme.chi.il.us>
Source record: 43452

>From the Daily News, Wednesday, March 24th:

" Howard Stern may have to consider asking embarrassing questions in Spanish if he wants to keep the top spot in the Los Angeles morning radio derby. According to the latest monthly Arbitron trend report, which may foreshadow what the full quarterly report will bring, Stern has dropped from first to fourth place among listeners of all ages. At No. 1 is Spanish country music station KLAX-FM's (97.9) morning show hosted by Juan Carlos Hidalgo. Stern has dropped from a rating of 6.7 to 5.5.
Also ahead of KLSX-FM's (97.1) Stern are Rick Dees on KIIS-AM/FM (102.7) and KLOS-FM's (95.5) ''The Mark and Brian Show.'' The fullwinter Arbitron ratings are due around April 21. -Fred Shuster, Daily News"

[Moderator's Note: Stern is 17th in Chicago. Doesn't surprize me. Bill]

## 417. RE: Howard in Boston!

Newsgroup: rec.radio.broadcasting
Date: 1993-03-26 06:16:24 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993Mar26.061624.15882@gagme.chi.il.us>
Source record: 43456

> From: mellob@rpi.edu (Brett A. Mellor) :

> Dear Mark, please elaborate on why -you- feel that the 7-11 FM
> music scene at WBCN was a waste. You provide no justification for
> your opinion.

Sure. Bradley is a great guy and a terrific DJ. The show that he was
hosting was going nowhere fast. Even he recently admitted in the press
that he was bored with the whole concept of 'The Sex Palace'(lately they
stopped using that name after the big stink made by the parents of some
local h.s. football cheerleaders who gave quite a dirty cheer directed
at the male organs of the football players from oposing h.s.team).
'The Sex Palace' was one music-oriented show. NOT! And the "Get The Led
Out" segment at 10 is as original as you can find. 'AAF does the same thing
every night with the same Led Zepplin playlist of "Rock'n'Roll","Black Dog",etc
(I don't know who copied whose idea in this situation. I assume every
rock station in the country has a similiar sort of Zepplin gimmick)
'BCN now blasts 'Get the Led Out" right after Howard's final word('BCNs
resident metal-head 'Metal Mike' handles the boards every weeknight 7-12
and answers the listener line during Howard's show to write down complaints
from 'local' 'BCN listenrs who are listening to Howard. No joke.)
>
> Please do not compare WBCN to the previously listed stations. I don't
> ask this because I feel that WBCN is so superior to them (although it is).

I agree. I'm not comparing them to 'BCN,though. To quote the former
'BCN legend and one-time writer for Letterman, Eddie Gordetsky,"104.1
is not about the frequency on the dial. It's a state of mind'. 'BCN
still remains a great institution with or without Howard at night.
The only reason I brought up the previously listed stations is because
they are attempting to lure some of the 'hard-core' music listenrs away.
I think it's a needless effort since the night-time music listenership
is quite weak across the FM dial as it is.

Personally, I don't see any danger to 'BCN since their overall audience
is huge. Howard's night-time audience will now be mostly composed of a
different, brand new set of 18-34 male listeners who normally don't tune
to 'BCN or radio,in general.(something similiar to the cult following
David Letterman on the TV side of the business. You either learn to hate
him or love him. Very exterme. Noting in-between).

All the talk in the press about 'loyal BCN listeners' being pissed off
at the move is pure nonsense. There is no such thing as
'loyalty' in radio. Only 'popularity'. People often confuse the two.
'BCN has been very popular in Boston over the last 25 years but its
ratings, as recently as 2 springs ago,often prove that the whole concept

of listener loyalty is bush.

Also, show me a person who listens to the same station for music 15 hours
a day everyday of the week and I'll show you a person who needs to get
an open mind.

> I ask this because WBCN does not play the same music as WCGY, WAAF,
> WZLX, and WFNX and Therefore, cannot be compared in a manner in which you
> have done. There are also many style differences that are irrelevant at
> this point, but so noted.

Absolutely. My point is that most 'BCNs pre-Howard listenrs,some of whom
are now supposedly defecting to other "music" stations at night, didn't
tune in to 'BCN just for music because Bradley's show was very heavy on
humor talk(alot of it just as sophmoric as Howie's) and listener participation
(mostly from female members of the audience talking about their breasts and
other finer things).

> It's just too bad that Bradley Jay got screwed in the process.

Yes and no. Yes,he got screwed because Howard may not stay at night forever
and could potentially move to mornings if Charles Laquidara gives up or
is forced to leave the morning shift when his contract expires in Septemeber.
At the same time,Bradley is a free man now with some options to choose from.

-Mark

## 418. Internet Talk Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-03-26 06:16:57 UTC
From: hhallika@tuba.calpoly.edu

>sense to me!

Yes, I agree! A while ago, I ordered a copy of the self inspection from
Harold, and I feel it's a great way to keep your station 'in check.'
I found several things at our station that needed attention that we've
previoulsy overlooked.

With it, we also are working on mock inspections. We bring in someone that
most of the staff doesn't know, and he 'plays' a FCC inspector. Yes, this
does make some jocks go "um, um , uh, um,..." but afterwards we explain to
them what we did and why. Besides being ready in the event of a real
inspection, I want my people to know what to do regardless.

there's my couple o' pennies worth...

>Michael A. Cornell sez...
>I'll know that's the direction they want to go if they ever play
>Ween's Push the Lil Daisies. We'll see...

Yeah, do...I'd love to hear them play WEEN.
(Then again, my thoughts on WEEN are, if they can record for Electra,
where's *my* contract?)

## 420. Re: What happened to Dan Ingram

Newsgroup: rec.radio.broadcasting
Date: 1993-03-26 06:17:38 UTC
From: testnet!pr
Message-ID: <1993Mar26.061738.15985@gagme.chi.il.us>
Source record: 43457

Dan Ingram is doing Saturdays, noon - 3pm on WCBS-FM-101.1,
New York City's oldies station.

(Other former WABC personalities doing shows there include
morning man Harry Harrison, late morning Ron Lundy; Cousin
Bruce Morrow does a few shows there too).

Ingram has said in interviews that he doesn't want to do more
than once a week; apparently he's doing quite well in the
voiceover field.

Can't wait for another CBS-FM Radio Greats weekend - all the living
former WABC jocks on, and it is the BEST time (had by all).

It sure makes things difficult. Sometimes the only answer is COD, cash or cer-
tified check. Most reputable suppliers will understand the situation to
accomodate this, if nothing else. On the other hand, I've asked several of
my clients about their relationships with their suppliers before any
problems occured, just as a preventive measure.

>
>I do agree that stations should pay their bills promptly and should come up

## 422. vcr's for recording/broadcast

Newsgroup: rec.radio.broadcasting
Date: 1993-03-26 06:23:01 UTC
From: Mark H David <mhd@WORLD.STD.COM>
Message-ID: <1993Mar26.062301.16204@gagme.chi.il.us>
Source record: 43461

Does anyone have any opinions about having a VCR in the studio, both for broadcast and for recording. The idea is that HiFi VHS is in general better than the best cassettes in sound quality, the tapes are about as cheap, or cheaper, and the most important thing: you can tape an hour-long show without needing to flip the tape. It's really nice to be able to just start up the tape 10 minutes before the show, and turn it off 10 minutes after, without worrying about running out of tape or forgetting to flip the tape, or having to have a missing section in the middle at some random point. Do any of you have VCR's in your studios? -- Mark H. David (mhd@world.std.com, WBRS 100.1 FM)

## 423. Air Checks Wanted/offered

Newsgroup: rec.radio.broadcasting
Date: 1993-03-26 06:23:41 UTC
From: "Chip (C.D.) Kelley" <chipk@bnr.ca>
Message-ID: <1993Mar26.062341.16266@gagme.chi.il.us>
Source record: 43460

I looking to get airchecks of the new formats on the following stations:

KISM-92.9 Bellingham WA: rock CHR "Kiss'm"
KAMZ-93.1 El Paso TX: CHR "Z93"
KKNB-104.1 Crete NE (Lincoln): modern rock "Planet"
KBEQ-FM-104.3 Kansas City MO/KBEQ-1340 Blue Springs MO: hit country
"Young Country 104"
KPNT-105.7 Ste. Genevieve MO (St. Louis): modern rock "Point"
WREA-1520 Dayton TN (Chattanooga): CHR

If somone has has access to any of the above, I can trade you something
for it. I live in Dallas and can tape any of those stations in
exchange or I have fairly recent tapes of the following:

* WNNX-99.7 Atlanta GA: modern rock "99X" 1/93
WBUS-99.9 Kankakee IL: CHR 1/93
* WZRH-106.1 Picayune MS (New Orleans LA): modern rock "106.1 the Zephyr" 2/93
** KTUX-98.9 Carthage TX (Shreveport LA/Longview TX): rock CHR "Tux 99 Rocks -
Louisiana, Texas' Best Rock & Roll" 1/93 and 2/28/93
KTAL-FM-98.1 Texarkana TX (Shreveport LA/Longview TX): AOR "98 Rocks!" 1/93
* WENZ-107.9 Cleveland OH: modern rock "107.9 the End" 12/92
* WQAL-104.1 Cleveland OH: hot AC "Q104" 12/92
WJMO-FM-92.3 Cleveland Hts OH (Cleveland): dance CHR "Jammin' 92" 12/92
WHOT-FM-101.1 Youngstown OH: CHR "Hot 101" 12/92
* KEBC-94.7 Oklahoma City OK: hit country 2/93
KYIS-98.9 OKC OK: adult CHR "98.9 Kiss FM" 12/92
KJYO-102.7 OKC OK: CHR "KJ103" 12/92
** KMYZ-FM-104.5 Pryor OK (Tulsa): rock CHR "Z104.5" 3/93
KAYI-106.9 Muskogee (Tulsa): adult CHR 3/93
* WQUT-101.5 Johnson City TN: rock CHR 1/93
KMXX-93.3 Killeen TX (Austin TX): hot AC "Mix 93.3" 12/92
KQXY-94.1 Beaumont TX: adult CHR "94Q" 12/92
* KIOC-106.1 Orange TX (Beaumont TX): CHR "Power Hits K106" 12/92
* KKYS-104.7 Bryan TX: CHR "104.7 Kiss FM" 12/92
** KKBQ-FM-92.9 Pasadena TX/KKBQ-790 Houston: hit country "93Q Country,
Houston's Fresh Country Hits" 12/92
KISX-107.3 Whitehouse TX (Tyler/Longview TX): adult CHR "Mix 107.3" 1/93
KWTX-FM-97.5 Waco TX: CHR "Most Music, Most Fun 97.5FM" 12/92
* KNIN-92.9/990 Wichita Falls TX: CHR "Power 92-9 KNIN" 1/93
KWFS-103.3 Wichita Falls TX: hit country "Lone Star 103" 1/93
KYYI-104.7 Wichita Falls TX: hit country "Hot Country Y104" 1/93

The * and the ** are the better stations of the bunch in my humble
opinion. The **'s are personal favorites. I didn't care much for
WJMO-FM (not that wild about dance and rap to begin with), KYIS (yawn),

KQXY and KWFS (pretty lame presentation).

KMXX is now hit country "Lone Star 93." With its LMA with cross-town KHFI about to end (with AOR KPEZ buying KHFI), KMXX thought it would do better by itself as a standalone with a country format, particularly when the the two other stations in town together have over 25% of the radio audience and KMXX's old hot AC format drew about 2-4%.

E-mail me back at chipk@bnr.ca.

In article <1993Mar23.063223.9059@gagme.chi.il.us> hansenr@ohsu.EDU (Robert Hansen) writes:

>KINK announced that KGW, as of March 1, was to be known as KINK-AM.
>The end of a legend...
>[Moderator's Note: Why on earth would a station with legendary 3 letter
>calls want to change them? Go figure. Bill]

Does anybody know how the FCC handles any potential re-granting of 3-letter calls. Three historical changes come to mind (excuse me if my memory fails me on some details), but were they handled as special cases?

1) After many years as WHN/New York, the station switched its call letters for several years in the late 50s to WMGM. It was re-granted the WHN call letters in (I believe) the early 60s. (Could it be that stations which once held 3-letter calls can return to them if they are still available? Could KINK's owners change their minds and re-claim the KGW calls?)

2) After the ABC stations in New York switched from the calls WJZ to WABC in the early 50s, the WJZ calls showed up on channel 13 in Baltimore.

3) And didn't an ownership swap between Cleveland and Philadelphia result in the KYW calls moving from the former city to the latter?

Obviously they don't issue new 3-letter calls. But what happens to old calls which are no longer being used by the station?

From: stevewa@guardian.up.edu
Message-ID: <1993Mar26.062821.16496@gagme.chi.il.us>
Source record: 43463

The radio properties (KINK and the former KGW-AM) are now owned by a different company than KGW-TV. I think part of the sale agreement might have been the call letter change. Still a shame, though.

Steve

P.S.--Portland still has two stations with 3-letter calls...KEX (1190 KHz) and KXL (750 KHz).

One might suspect that the owners are (a) not true Oregonians, and/or (b)
have no interest in history. Probably both.

Here in the SF bay area KRE (Berkeley) was reincarnated for awhile before
it became (again) KBLX-AM.

I erred in my previous follow-post about the switching of the KYW calls from Cleveland to Philadelphia. It was CHICAGO to Philadelphia some 59 years ago.

According to the 1992 Broadcasting & Cable Market Place (aka the Broadcasting Yearbook):

NBC and Westinghouse did switch stations in the two cities at least twice: in 1955 NBC swapped WNBK-TV and WTAM-AM-FM Cleveland and $3 mil to Westinghouse for WPTZ-TV and KYW-AM Philadelphia. Then in 1965, NBC and Westinghouse swapped their Philadelphia-Cleveland holdings again.

But apparently, the calls KYW remained in Philadelphia all this time.

...Nevertheless, way back in 1934, Westinghouse moved KYW-AM from Chicago to Philadelphia. KYW-AM was Chicago's first radio station and Westinghouse moved it to Philly to comply with government quota technicalities.

So the point remains: the FCC has permitted some moving and preservation of historic 3-letter calls. Under what circumstances are these permitted?

Okay, gang. Here's the latest plea from a blown-out DJ needing gainful employment and a new source of carts to steal :-)

HELP! The dust settled, the consultant left town and I'm on the street!

I was doing Middays, Production director, and engineering at WDJB B-106 in Fort Wayne, Indiana! Now i'm looking at soap operas all day long!

The Resume:

On the air at:

WRBI/Batesville, IN
WKBV/WFMG, Richmond, IN

WPHR "Power 108" /Cleveland
WGAR / Cleveland
WRQN "93Q" Toledo
KCDQ "CD102" Odessa/Midland, Texas
WDJB "B106" / Ft. Wayne, IN

Engineering: Duties at WPHR (assisted installation 3 studios and STL )
WGAR(assisted install 6 studios and sattelite)
WRQN (maintenance and mobile studio)
KCDQ( Chief Engineer)
WDJB (Assistant Chief Engineer)
Applied Communication Technologies / Ft. Wayne, IN (international rf and hardware consultancy in Broadcast, Cellular, public safety, sattelite, industrial and just aboiuyt everything else involving getting a message from here to there) Technician

4 years 8-track production experience
Killer tape and resume available
Call: 219/432-4300 or reply via E-mail to author of this message

Thanks, and keep rockin'!!

The problem I have with this is that KLSX and KLAX have similar names
and frequencies. If arbatron is not careful when recording ratings
my guess is that it is quite possible to confuse the two stations
at a glance. In addition I believe this stations standing in the
ratings was pretty low until they changed there call letters in
sept or oct where they were rated number one in the morning during
winter rating period. Or arbatron has a large spanish speaking
sample size in the LA market. (not to mention the station is
still, I believe, using the same format they had last summer).

Just a small observation.

Joe Barisa

>KLOS-FM's (95.5) ''The Mark and Brian Show.'' The fullwinter Arbitron ratings
>are due around April 21. -Fred Shuster, Daily News"
>

Howard Stern reported this on his own show last month. Here's what "Fred
Shuster, Daily News" didn't mention: the Spanish station had just changed
its call letters to KLAX, which is only one letter different from Stern's
KLSX. Stern's theory was that listeners reported listening to KLAX by
mistake, when in fact they were listening to KLSX. Stern said he was
pursuing a formal complaint with Arbitron, but I never heard any results.

[Moderator's Note: I believe that Stern's affiliate station in LA is KSLX.
But it does sound similar. Still, it is a stretch to blame phonetic
similarities for a fall in Stern's ratings. Maybe LA is just getting tired
of Mr Stern. Bill]

I agree with John on this one whole heartedly. I have about
a thousand dollars of MY MONEY sitting in some flakey radio
stations pocket. Geez I wish my landlord would let me float
like these cats want to do. If you owe the parts company
money...you better pay up. If you owe the engineer
money...Don't be surprised when you get caught off the air
and everybody standing around looking down their noses at
you. Hal made a good point in his presentation on this
subject...but the responsibility still lies with the
management of the station to keep the accounts UP TO DATE!!

On a bit of a side note. There are suppliers out there that
will cut you off when your account goes over thirty days.
They won't even ship to you COD...Thar's a bit overboard and
I try not to deal with people like that.

> "an emergency". At that time I bring up some past due balances. "But

According to Rick Neace at Marti, this happens a lot. They simply refuse
help until the bill is paid, but do acknowledge the occasional need to
help a new owner or engineer.

>[Moderator's Note: John, I may be mistaken (there's always a first time) but
>I believe that the original poster was complaining about the fact that the

## 438. Columbia Radio Hour

Newsgroup: rec.radio.broadcasting
Date: 1993-03-28 01:01:46 UTC
From: WEOS-FM <BLACK%HWS1%HWS.BITNET@VM1.NoDak.EDU>
Message-ID: <1993Mar28.010146.27613@gagme.chi.il.us>
Source record: 43476

The next Columbia Radio hour is on Sunday April 18th, at 11AM EDT, with Leonard Cohen. THis is an "unplugged" type program, which features singer songwriters and many "special guests". The program runs 1 Hour and may be aired live or taped for 1 play on your station. The program is available via stellite on Satcon C5 and Galaxy VI. Some tapes may be available. If you have not gotten the info, CAll Josh Rosenthal at 212 833 8616.

The show is in commercial format with breaks and some commercials. Non-commercia stations cover the breaks. The shows are EXCELLENT! It would be worth your while to check out this LIVE, unedited show.

For those of you that do not have a dish, check with your local Public Radio station (it may be even be next door to you on campus) or a commercial station in town. The satellite formats are SCPC for Galaxy VI and DATS for SATCOMC5.

A word about the NPR satellite: This transponder is the Public Radio Satellite System. There is over 30,000 hours of programming a year available, enough to over 3 stations all satellite for a year! You do NOT have to be a member of National Public Radio to use the satellite. You do need to be a registered, licensed user, if you are going to pull programming down yourself, ie your own dish and equipment. The license fee covers access to the DACS data service, which gives you information on what is available and when, free satellite equipment repair, and free upgrades of equipment, as the system upgrades in the near future. The fee is based on station Cash budgets, on a sliding scale. For inforamtion: Call NPR at 202-822-2600 and ask for New stations Inforamtion.

Just to give you an example, a lot of the Longhorn programming which many of you are paying for, is distributed free on the bird. In addition, many Jazz, blues, folk, public affairs, news, concerts, festivals, special events, and of course classical programs are available, without being memebrs of NPR. Many programs that are NPR and APR may even be availble to your station, for an administative fee, such as The World Cafe, Afropop Worldwide, and Bluesstage.
WEOS is putting the NCAA Lacrosse Tournament up there for free, and things like the CHicago Blues Festival, Chicago Gospel Festival, Chicago Jazz Festival, Playboy Jazz Festival, Montreux Detroit Jazz Festival, and much more.
With a new supreme court justice coming, live hearings wil be offered. In addition, Pacifica News and programming is available, as well as the BBC.

Check it out. You may be able to enhance your station with programming that the other "public" stations are afraid to air, such as a magazine program covering Gay/Lesbian news and issues, Women's issues, experimental music, and others.

It sure makes things difficult. Sometimes the only answer is COD, cash or cer-
tified check. Most reputable suppliers will understand the situation to
accomodate this, if nothing else. On the other hand, I've asked several of
my clients about their relationships with their suppliers before any
problems occured, just as a preventive measure.

>
>I do agree that stations should pay their bills promptly and should come up
>with a system that helps expedite orders that may have partial problems.
>For example, what I do to try to expedite orders is sign off invoices as soon

## 440. vcr's for recording/broadcast

Newsgroup: rec.radio.broadcasting
Date: 1993-03-28 01:05:19 UTC
From: Mark H David <mhd@WORLD.STD.COM>
Message-ID: <1993Mar28.010519.27782@gagme.chi.il.us>
Source record: 43478

Does anyone have any opinions about having a VCR in the studio, both for broadcast and for recording. The idea is that HiFi VHS is in general better than the best cassettes in sound quality, the tapes are about as cheap, or cheaper, and the most important thing: you can tape an hour-long show without needing to flip the tape. It's really nice to be able to just start up the tape 10 minutes before the show, and turn it off 10 minutes after, without worrying about running out of tape or forgetting to flip the tape, or having to have a missing section in the middle at some random point. Do any of you have VCR's in your studios? -- Mark H. David (mhd@world.std.com, WBRS 100.1 FM)

## 441. Air Checks Wanted/offered

Newsgroup: rec.radio.broadcasting

From: "Chip (C.D.) Kelley" <chipk@bnr.ca>
Message-ID: <1993Mar28.010548.27822@gagme.chi.il.us>
Source record: 43479

I looking to get airchecks of the new formats on the following stations:

KISM-92.9 Bellingham WA: rock CHR "Kiss'm"
KAMZ-93.1 El Paso TX: CHR "Z93"
KKNB-104.1 Crete NE (Lincoln): modern rock "Planet"
KBEQ-FM-104.3 Kansas City MO/KBEQ-1340 Blue Springs MO: hit country
"Young Country 104"
KPNT-105.7 Ste. Genevieve MO (St. Louis): modern rock "Point"
WREA-1520 Dayton TN (Chattanooga): CHR

If somone has has access to any of the above, I can trade you something
for it. I live in Dallas and can tape any of those stations in
exchange or I have fairly recent tapes of the following:

* WNNX-99.7 Atlanta GA: modern rock "99X" 1/93
WBUS-99.9 Kankakee IL: CHR 1/93
* WZRH-106.1 Picayune MS (New Orleans LA): modern rock "106.1 the Zephyr" 2/93
** KTUX-98.9 Carthage TX (Shreveport LA/Longview TX): rock CHR "Tux 99 Rocks -
Louisiana, Texas' Best Rock & Roll" 1/93 and 2/28/93
KTAL-FM-98.1 Texarkana TX (Shreveport LA/Longview TX): AOR "98 Rocks!" 1/93
* WENZ-107.9 Cleveland OH: modern rock "107.9 the End" 12/92
* WQAL-104.1 Cleveland OH: hot AC "Q104" 12/92
WJMO-FM-92.3 Cleveland Hts OH (Cleveland): dance CHR "Jammin' 92" 12/92
WHOT-FM-101.1 Youngstown OH: CHR "Hot 101" 12/92
* KEBC-94.7 Oklahoma City OK: hit country 2/93
KYIS-98.9 OKC OK: adult CHR "98.9 Kiss FM" 12/92
KJYO-102.7 OKC OK: CHR "KJ103" 12/92
** KMYZ-FM-104.5 Pryor OK (Tulsa): rock CHR "Z104.5" 3/93
KAYI-106.9 Muskogee (Tulsa): adult CHR 3/93
* WQUT-101.5 Johnson City TN: rock CHR 1/93
KMXX-93.3 Killeen TX (Austin TX): hot AC "Mix 93.3" 12/92
KQXY-94.1 Beaumont TX: adult CHR "94Q" 12/92
* KIOC-106.1 Orange TX (Beaumont TX): CHR "Power Hits K106" 12/92
* KKYS-104.7 Bryan TX: CHR "104.7 Kiss FM" 12/92
** KKBQ-FM-92.9 Pasadena TX/KKBQ-790 Houston: hit country "93Q Country,
Houston's Fresh Country Hits" 12/92
KISX-107.3 Whitehouse TX (Tyler/Longview TX): adult CHR "Mix 107.3" 1/93
KWTX-FM-97.5 Waco TX: CHR "Most Music, Most Fun 97.5FM" 12/92
* KNIN-92.9/990 Wichita Falls TX: CHR "Power 92-9 KNIN" 1/93
KWFS-103.3 Wichita Falls TX: hit country "Lone Star 103" 1/93
KYYI-104.7 Wichita Falls TX: hit country "Hot Country Y104" 1/93

The * and the ** are the better stations of the bunch in my humble
opinion. The **'s are personal favorites. I didn't care much for
WJMO-FM (not that wild about dance and rap to begin with), KYIS (yawn),

KQXY and KWFS (pretty lame presentation).

KMXX is now hit country "Lone Star 93." With its LMA with cross-town KHFI about to end (with AOR KPEZ buying KHFI), KMXX thought it would do better by itself as a standalone with a country format, particularly when the the two other stations in town together have over 25% of the radio audience and KMXX's old hot AC format drew about 2-4%.

E-mail me back at chipk@bnr.ca.

Chip
My opinions, not BNR's

## 442. Compression and clipping.

Newsgroup: rec.radio.broadcasting
Date: 1993-03-28 01:06:20 UTC
From: john@zygot.ati.com
Message-ID: <1993Mar28.010620.27850@gagme.chi.il.us>

> differently in the digital domain than analog. But, then again, when FM was
> younger, they were the bastions of quality hi-fi music. Too bad that is no
> longeer the case. Bill]

Make no mistake: the reason for the lion's share of compression and clipping is to "enhance" the sound of the station. The original purpose was to prevent overmodulation, but that has been lost "in the noise" as it were.

Processing an FM station now is a black art. There are boxes upon boxes to make it louder, brighter, have more "punch", etc., etc., in order to stand out from the competition. The original point of processing is now a minor incidental to the "tayloring of the audio".

The fact is, a minimally processed (for modulation control) FM station is an awesome sounding thing. It is quiet, has excellent frequency response, and has low distortion. Modern exciters and receivers are capable of the finest audio the ear can hear. As a matter of fact, they are capable of better audio than can be reproduced by some of these "bit-stuffed" digital radio systems. And noise is never a problem unless you are nearly outside the coverage area.

Which leads to this thread. I cannot imagine in my wildest thoughts that broadcasters would be content to just broadcast the sound as it appears on CDs. It would turn into the same processing war that is heard now in every major market in the country. Whether that processing is in the digital or the analog domain is irrelavent, since the intent is, after all, to change the sound.

DAB is not the savior of radio. The reason FM sounds so bad has nothing whatsoever to do with the basic technical medium. It sounds that way because broadcasters intentionally make it sound that way. In fact, depending upon the system, current FM is capable of better sound than DAB. Unlike the AM vs FM controversy, the figures are there to back it up.

To clean up the sound of radio we need to change the broadcasters, not the modulation scheme.

He does a radio show on weekends (Sat & Sun) on WCBS-FM New York, 101.1 MHz at around noon. Think 11AM to 3PM. I used to listen to him on WABC years ago.

## 445. FCC frustration

Newsgroup: rec.radio.broadcasting
Date: 1993-03-28 01:11:33 UTC
From: wdp@gagme.chi.il.us
Message-ID: <1993Mar28.011133.28105@gagme.chi.il.us>
Source record: 43483

Since Howard Stern seems to be the topic of conversation lately, I would like to offer my opinion and raise some questions about our beloved FCC.

First of all, Mr. Stern is only being cut down by those who do not understand his type of programming. Howard says and does things that everyone wants to do but does not have the opportunity because of possibly being repressed by government or station management. Howard can be very annoying at times admittedly, I don't even consider myself a "fan", but aren't all broadcasts starting to fall into the same category? Meaning, trying to shake things up just a little for the interest of ratings and improved sponsorship.

Howard is not the only one under such scrutiny. I am from Chicago and happen to know people in radio and just simply listen to stations and I have heard that there are several broacastors who are under the preverbial magnifying glass of the FCC for the same "offenses" that Mr. Stern has been accused of. Let's try to stop "Howard bashing" (for those who do, although I do respect your opinion) and answer the bigger question of how far is the FCC going to take this whole censorship issue?

This leads to my question(s) about the FCC... Wasn't this "organization" originally formed for the sole purpose of making sure that broadcast signals do not overmodulate into one another? Meaning, make sure stations do not interfere with each others signals and do not take their "air-space." If this was & still is indeed the only written sole reason for this commission, then why is our society paying them to tell us just what we can and cannot listen to? I get asked by several of my peers...Why don't you go and talk to your congressman or write a letter? Well, this leads to my second question.

FCC officials are appointed not elected, who ever came up with this rule?!?! How can we as United States citizens get this changed? I think that it is just ridiculous that our Constitution is under such "interpretation"!!! The first amendment is a very simple one "FREE SPEECH" end of story!!!

Please respond in any way possible. If you do know a lot about the FCC please fill me in because I'm afraid that I do not know too many of the specifics. And, please let me know if you agree/disagree with my comments or questions.

Thanks in advance!!!

Here at Dartmouth we have TWO stations: WFRD-FM and WDCR-AM (which, BTW, recently celebrated its 35th anniversary). Over breaks we simulcast WFRD's signal, except for sports and, I believe, one classical music show (I'll talk about that a more in a future post). For Christmas we have a "99-Hour marathon" in which the same DJ is legally on the air for 99 consecutive hours. That's how we manage to stay on the air 365 days a year.

--Ted Schuerzinger

So far, ads are not screened, but software makes provision for that.
Only problem so far was a caller who didn't hear his ad run immediately,
so he called back and complained. His complaint ran for the next several
days. I'd really expect to start hearing some political stuff, but
haven't yet.

>me on some details), but were they handled as special cases?

>1) After many years as WHN/New York, the station switched its call letters
>for several years in the late 50s to WMGM. It was re-granted the WHN
>call letters in (I believe) the early 60s. (Could it be that stations
>which once held 3-letter calls can return to them if they are still
>available? Could KINK's owners change their minds and re-claim the KGW
>calls?)

The dates were 1957 and 1962, to be exact. An upcoming segment of
my radio history program will address 1050 in NYC. This is one of
several VERY special cases where the FCC let stations reclaim
historic 3 letter calls. Since the late 80s, when a 3-letter call
goes out of use in all services (AM, FM, and TV), it is dead
and cannot be resurrected. As long as it is still in use somewhere,
it can be used on another band in the same city by the same owner.
Some examples:

KHJ(AM) Los Angeles was sold in 1985 and became KRTH(AM). KHJ-TV
kept its calls. In 1988, KHJ-TV's new owners changed calls to
KCAL-TV...but the owners of the AM could not get the KHJ calls
back. They are now KKHJ(AM). A few other 3-letter calls have been
withdrawn for good since the mid-80s. They include WHN New York
(to WFAN, 1986), KWK St. Louis (to KGLD/WKBQ, 1986), and I think
one other. The last call to be salvaged was WJW Cleveland. The
call was transferred from WJW(AM) [which became WRMR] to then-WJKW-TV,
which became WJW-TV, in about 1986.

>2) After the ABC stations in New York switched from the calls WJZ to WABC
>in the early 50s, the WJZ calls showed up on channel 13 in Baltimore.

A very special case. Westinghouse put the original WJZ radio on the
air in Newark NJ in 1921...one of its original four stations. (The
others were KDKA Pittsburgh, KYW in Chicago [see below], and KBZ
in East Springfield MA. KBZ later became WBZ...and eventually moved
to Boston...and I'll avoid saying more so I don't become a toady
to my employer...right, Bill? ;-)

[Moderator injects: Too late, Scott. You already are. :-) Bill]

In any case, when ABC gave up the WJZ calls in 1953, Westinghouse asked for
them back. They were applied to the only Westinghouse property at the time
without historic calls, WAAM(TV) Baltimore.

>3) And didn't an ownership swap between Cleveland and Philadelphia result
>in the KYW calls moving from the former city to the latter?

Quite a swap. KYW started in Chicago in 1921. Westinghouse
moved the station to Philadelphia in 1934. Meanwhile NBC bought
WTAM radio in Cleveland around the same time. Philco put WPTZ-TV
on in Philly in 1946...while NBC was putting WNBK-TV on the air in
Cleveland. WPTZ was also an NBC affiliate. In 1956, NBC decided
it would rather own a station in the then-#3 Philadelphia market,
so they told Westinghouse (which had bought WPTZ) that the station
would lose its NBC affiliation if it did not agree to trade
with NBC. Westinghouse gave in, and in 1957 the following swap
was completed:

NBC got KYW(AM) Philadelphia and WPTZ-TV Philadelphia. The stations
became WRCV-AM-TV.

Westinghouse got WTAM(AM)Cleveland and WNBK-TV Cleveland. The calls
were changed to KYW-AM-TV. The AM station became a rocker as "KY."

In 1965, years of litigation ended in a decision that NBC had carried
out blackmail. NBC had to take back the Cleveland stations at a
considerable loss. The Cleveland stations became WKYC-AM-FM-TV (The
FM had been added in the interim). The Philly stations got
the KYW calls back...as KYW-AM-TV.

The Philly stations are still there, and Group W has added WMMR-FM.

NBC sold WKYC-AM around 1970...it became WWWE. WKYC-FM was sold
around 1979 and became WMJI. NBC sold 51% of WKYC-TV to Multimedia
two years ago.

Glad you asked?

>Obviously they don't issue new 3-letter calls. But what happens to old
>calls which are no longer being used by the station?

Now they die. It's worth noting that the KGW calls are NOT dead. There's
still a KGW-TV 8. The only reason KGW(AM) didn't become KINK(AM) sooner
is because for about a year, a buyer was looking at buying the stations,
and wanted to buy the KGW(AM) calls as an asset. When that deal fell
through, the calls were ditched.

Sad.

# 451. Changes at Boston's Classic Rocker - WZLX

Newsgroup: rec.radio.broadcasting
Date: 1993-03-30 06:16:36 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993Mar30.061636.5107@gagme.chi.il.us>
Source record: 43490

Well, I left town for a couple of days and Infinity makes another move :-))
The latest move was made on Friday afternoon. Its impact will probably
be less significant on the Boston FM radio than somewhat 'unpopular'
introduction of Howard Stern to WBCN's airwaves on March 3rd and removal
of a longtime night-time personality Brdaley Jay.

I haven't seen anything about what happened on Friday in Monday morning's
papers but my source who interns at WZLX is very reliable so I'll stand
by the story :

On Friday(3/26) after months of speculations(which were all true and
reported by me in this group from time to time :-), the word finally
came down that two morning personalities Annalisa(6-10am) and
sports/news director Greg Madden(6-10am), mid-day jock Jeff "The Gonz"
Gonzer(10-2pm) are all out. Starting today(Monday) PM drive time DJ Chuck
Nowlin takes over Annalisa's slot(I just heard him :-),night time jock
Anne Cody moves into Gonzer's mid-day slot. Long-time former 'BCN DJ
Lisa "Trax Spins Great Wax" Traxler who's been doing weekends and
fill-ins at 'ZLX for the past year moves into Cody's evening
spot. There will be two more people added : a news person for the
morning show and a DJ to handle afternoon drive. PD Buzz Knight who
was brought in December by Cook Inlet management was not effected by
this change of on-air talent. All these moves are temporary. There will
be more shuffling and some changes on the weekend...Also,this morning
on WZLX there are very few breaks,no chatter and tons of music...:-)

Personally,Gonzer's and Annalisa's dismissals are not really that surprising.
When Infinity first agreed to buy WZLX from Cook Inlet back
in August,both of them made risky on-air comments about their displeasure with
Infinity,WBCN DJs(namely 'BCNs morning man Charles Laquidara), and what
was only a rumor at the time - arrival of Howard Stern to 'ZLX. I guess
they felt that their days at 'ZLX were numbered...

Infnity assumed control of WZLX-100.7FM(Classic Rock) on February 1st.
It looks like Infinity is finally starting to take interest in its 'other
' station(WZLX) in town after a couple of months hands-off aproach.

I'm just glad Infinity will not put its new syndicated star Doug "The
Greasman" Tracht on 'ZLX air. They recently have started running Grease's
nightly show in the morning drive on Infinity's new Atlanta classic rock
station. I had a misfortune of hearing him for about 20-25 minutes(that's
how much I could take :-( while visiting NYC this past weekend. All you
Stern haters will beg for Howard after listening a few minutes of Grease.
Grease makes TalkNet wasteland sound exciting. Infinity should be ashamed
of calling Mr.Tracht's show a quality radio programming and running it
on a very respectable NY station like WXRK 92.3FM(K-ROCK)!

-Mark

I have not observed this situation on our local cable system (Ruston,
Louisiana), but I recently read a column in an old-time radio club
newsletter that indicated that a satellite feed of old-time radio
programming was available for cable systems.

Our system here carries a classical-music radio station from Chicago.
However, it can only be picked up if the cable is connected to an FM tuner.
It doesn't come through on the TV. Sound quality is excellent.

>
> I really need info on how to use carrier current, as I am trying to
> broadcast to one entire building. I am using a Ramsey FM-10, but I really
> know nothing about carrier current. Any and all information would be
> appreciated.

CARRIER CURRENT is a method of transmitting an RF signal throughout a building using the power lines as a path for the RF. Many books published in the 40's and 50's discuss this method in some detail. The "wireless intercom" is an example of this technique in which you plug two "stations" into the power receptacles and they communicate with each other by means of RF "riding" on the power lines.

Transmission is frequently limited to a single building such as a dormatory or school building because of the nature of the signal; it is blocked from further radiation by the power transformers feeding the building.

The FCC has a set of regulations which define the limits of power, etc. which is permissible for such activity. Primarily, this means the signal should not be receiveable outside of the building in which the transmitter is located.

I think carrier current is generally limited to AM broadcast,
and it looks like you are trying to do FM. You may be able to do
something using a leaky transmission line (such as Andrew Radiax).
FCC rules related to license free operation in broadcast bands
are:

15.219 - Power and antenna limits on operation in AM band.
15.221 - License free operation on AM on educational campuses
if field limits at campus boundary are met.
15.239 - Field limits on devices operating in FM band.

You may want to call LPB, who has supplied much of the carrier
current broadcast equipment in use. You can reach them at

LPB Inc.

My former employer standardized on the AKG DSE-700 corporate wide. While one can argue for/against corporate standards all day long, the real question is whether or not the gear suits your needs.

The DSE is a RAM based editor. This makes it very fast. While you work it shadows to disk, so in the event of a power failure there is some sort of backup (also makes saving faster). A UPS is _highly_ reccomended for this (or probably any) workstation, though.

One of the things I liked about it was that it is PC based, instead of Mac. It has its own interface, instead of conforming to the Mac GUI. This means it's easier for non-computer types.

More importantly, instead of being tied to a mouse/trackball for input, a VERY intuitive interface resembling a mixer and tape deck combined is used. This makes it a very easy transition from tape to workstation (our people managed it on their own with only the manual in no time at all).

The drawbacks? There are several;

1) it's expensive...about 35-40k...a lot more than most small stations can afford...

2) because it's RAM based, the recording time is limited...16 minutes mono, or about 2 minutes of all 8 tracks. But it is smart enough to only use memory for recorded tracks, so that goes farther than you'd think.

3) so far, no digital in and outs...it's designed to work primarily with existing analog gear. An AES/EBU in/out capability is supposedly on the way.

4) the standard unit only comes with a 600MB disk. This is not a whole lot of storage for digital audio...but it is standard SCSI, which makes it easy to upgrade (I don't know if it'll support more than one drive, but you could certainly put a bigger one in...)

There are getting to be more and more choices in this area, the DSE is one of the early efforts, and as far as I know the only one designed specifically with radio production in mind. It also has the advantage of being supported by a company that's been around a few years...

I have no connection with AKG except as a former user of their products...

Steve

I was under the impression that FCC regs went as follows: Any station with
3-letter calls that shares them with other radio or TV stations (i.e.
KGW-AM, KGW-FM, KGW-TV) can keep them, but if any one of those stations
are sold off to another company, the new onwer is required to get new
calls, and of course any new set of calls will be 4-letters. That's why
WOR-TV in New York became WWOR-TV after it was sold.

Ah excuse me I have a copy of this weeks People magazine which has an interview with Robin Quivers. There is a picture of her and Howard at the press confrence in LA. Behind them on the wall is a banner that says 97.1 KLSX as plain as day. In addition, not a flame, how many radio stations have gone from being near the 20s in ratings to number 1 in one rating period without changing any format? That is why I question it. I am not saying it is impossible just highly improbable.

[Moderator's Note: OK I was wrong (there is always a first time) but then so was Broadcasting mag. Bill]

I tend to agree with Bill. Even though Stern is on when I start my (long) morning commute around 5am and Mark and Brian start at 6am, I will opt to listen to KLOS (the station on which Mark and Brian appear) until 6am.

Stern is novel, yes, and I did listen to him for several days, but I grew tired of his intensely negative ranting. I just don't need that in the morning.

I wouldn't be surprised if the novelty is wearing off for other LA market listeners.

Only if you believe "Broadcasting" magazine, which has had a lot of trouble getting those calls right. It's embarrassing that the #1 trade in the field can't get call letters right. It reminds me of the time when Time magazine was reporting on top-40 pioneer Todd Storz and his statuion in Omaha. The station was KOWH, but Time referred to it the whole way through as KOHW. Storz shot back with an ad in Variety thanking "Tiem" magazine for the coverage. :-)

Don't think Stern and Greater Media (which own KLSX) haven't thought of
this already. After the winter book showed KLAX at #1, KLSX
appealed to Arbitron, which conducted an audit of the books.

Greater Media looked over the books as well, and was forced to concede
that KLAX is indeed topping the market.

I was surprised too.

As for the theory that Arbitron is just using a large Hispanic
sample, Spanish talker KTNQ and spanish AC KLVE-FM have placed
regularly in LA's top 10 for years now...

## 464. FM Propagation Opening in St. Louis Mar 28

Newsgroup: rec.radio.broadcasting
Date: 1993-03-30 06:44:34 UTC
From: Will Martin <wmartin@STL-06SIMA.ARMY.MIL>
Message-ID: <1993Mar30.064434.5923@gagme.chi.il.us>
Source record: 43353

I noticed unusually clear reception of moderately-distant FM stations here in St. Louis on the morning of Sunday, 28 March. The first indication of it I had was when I ran across a strong signal between the local KDHX on 88.1 and the semi-local WSIE on 88.7 -- it turned out to be KUMR on 88.5 from Rolla, MO. That was on a GE Superradio II, and I had gotten that same station on the SupII before, now and then, but the thing that amazed me was that it was coming in loud and clear on my little Sony ICF-7600D too! (I didn't even have to extend the whip very far!)

So I spent some time tuning about and noted a lot of low-power stations in the educational-FM-segment under 92 MHz that I normally cannot hear, and a large number of commercial FMs all along the dial coming in from mostly Illinois sites. I have a question about one of the latter -- on 99.5 MHz, I was getting "WKDQ" fairly strongly. Those call letters were not listed in the latest FM Atlas, but the commercials and talk indicated this was Quincy, IL, which does have a 99.5 station listed there as "WQCY". So I guess "WKDQ" is a renamed "WQCY". Can someone verify that for me?

Anyway, I set up the SupII so that it was picking up WIBI (91.1) from Carlinville, IL, for my wife, who spent most of her childhood in that area, and who liked their religious programming. She's not much of a radio listener but she enjoyed this unusual event.

Anyone have any info on just what caused this particular propagation opening? I didn't have time to keep tuning around, so I don't know when it closed down; later in the day things seemed to have returned to normal, and those distant FMers were no longer detectible.

Quite simple, actually. Whatever company owned WOR-AM and WOR-TV in the mid-80s sold the TV station to another company. FCC regs at the time said that stations could only share call letters if they were part of the same company, thus the new owner was forced to change the calls. This is the same reason WNEW-TV became WNYW-TV after Rupert Murdoch bought it.

>Speaking of this, I missed the story on how/why WOR turned into WWOR.
>Could someone send me a review of what happened?

The year was about 1986. The FCC was in the process of dismantling
RKO General's broadcasting empire, after RKO had been found an
unfit licensee (double-billing for spots and whatnot). Per
FCC rules of the time, WOR radio (and sister station WRKS-FM)
had to be sold separately from WOR-TV. WOR radio was sold to
Buckley Broadcasting, which kept the WOR calls. WRKS-FM went
to Summit Broadcasting. Channel 9 TV went to MCA, which took
the WWOR(TV) calls. At that time, there was no way for them
to use the WOR-TV calls under separate ownership from WOR
radio. Today that would be permissible.

WWOR(TV) was licensed to Secaucus NJ, rather than WOR-TV's NYC,
thanks to the FCC's desire to license a commercial VHF station
to NJ. MCA got a longer-than-usual license term in exchange.
When MCA was sold to the Japanese a couple of years back,
WWOR had to be spun off into its own company, Pinelands Inc.,
which has since been acquired by BHC/Chris-Craft.

Source record: 43356

Hi ---

I will be attending the 1993 NAB in Las Vegas this April, and was wondering how many other 'rec.radio.broadcasting' (or USENET in general) people would be there too.

Last year I did see Harold H. at his booth in the radio area, although he was with a (hopefully) customer and I didn't want to interrupt the conversation.

Now I know that CQ Magazine [I think] has a Ham Radio operator reception during the NAB, but wouldn't it be great to have a 'session' of our own (Birds of a Feather, I believe some call it that) ?

Wouldn't have to be anything fancy....maybe we could all meet at some local watering hole for an informal get-together.

Any ideas or thoughts on this ? Perhaps something is already planned, and I missed hearing about it.... Feel free to reply by email to

jj1028 at hogpa.att.com

and/or I'll watch this newsgroup for replies.

Thanks,
M. R. Baker, WA3ZXO

Indeedy!

At KFJC (Foothill College) we have a VHS machine in the on-air control room
for air checks and playback. You can in fact record SIX hours with quality
no worse
than a chrome cassette, using HiFi Sound on such a beastie. HiFi sound works
by recording the sound on a subcarrier in the video track, as I recall.

Our VHS records from air-monitor, by popular request. It plays back thru
a secondary input on some mixer channel or another.

## 470. re: compression and clipping

Newsgroup: rec.radio.broadcasting
Date: 1993-04-01 22:59:21 UTC
From: JOHN SCHMIDT <schmidt@auvax1.adelphi.edu>
Message-ID: <1993Apr1.225921.5073@gagme.chi.il.us>
Source record: 43359

While I generally agree with John of cow country, there are a couple of points that need clarifying.

First, John is 100 percent right that FM would sound much better if everyone backed off the processing.

One of the problems which started this whole business, overmodulation, has its roots in several bits of interesting history. The Europeans use somewhat different standards (see below) and have less of a problem.

The first controversial topic is preemphasis. What, you ask, is preemphasis?

In the early days of FM, receivers weren't too sensitive, and transmitters were low power, tests indicated that the noise performance of FM wasn't too great. There was a lot of hiss.

Measurement of program material available then (in the mid 1930's) indicated that the high frequency components fell off rapidly above 2kHz or so. Therefore, you could boost the higher frequencies a lot before transmitting without overmodulating and splattering into the next channel. A complimentary high frequency cut is used in the reciever. The higher frequency components of the hiss get cut along with the previously boosted treble components. The effect was to improve the signal to noise ratio by some number of dB.

Boosting the hi frequencies before transmitting them is called high frequency preemphasis. The complementary cut in the receiver is called high frequency deemphasis. This is a very commonly used method of improving noise performance, it is used on magnetic tape, records, optical film, and even CD's (but it can be switched off in a CD if more HF headroom is needed).

The standard chosen in the US (in the late 30's) was that obtained using a R-C filter with a time constant of 75 microseconds. Without going into the math, this gives about 3dB of boost at 2kHz, rising at 6dB per octive up to about 17 dB at 15 kHz.

The down side of this is you have 17 dB less headroom at 15kHz than you do at 400 Hz. In 1939 this wasn't much of a problem, but as better and better fidelity systems came along, and as musical tastes have changed, much program material is much "brighter" and isn't 17 dB down at 15 kHz, in fact it isn't down much at all. Therefore, to keep from overmodulating, you either have to lower your signal levels by something approaching 17 dB, or "limit" the high frequencies, either continuously (turn the treble down a lot!) (makes for muddy sounding programming) or dynamically, (makes for either compressed, distorted, or muddy sounding programming). Lowering levels is the same as cutting power, which reduces coverage area. A 3dB reduction in average modulation has an effect similar to cutting the power in half. 17dB is about like cutting the power to 1/50th of the original. No wonder people use processing (yes, I know

many stations abuse it, but try keeping your modulation legal without any. You won't be heard out of your backyard...)

The Europeans were more conservative, and chose a 25 microsecond time constant.
This means the three dB point is about 6 kHz, and 15 kHz is only boosted about 10 dB. Therefore they don't have to limit as much to keep their modulation below 100 %

There is another factor, which is part regulation, and part manufacturer created. The FCC regulates FM in the US, and put tight limits on overmodulation, to avoid interference to other stations. To make things even worse, all the major FM modulation monitor makers (Belar, McMartin, TFT) made their monitors so the peak light responded to very brief peaks, some 5 to 10 times shorter than the FCC required, and therefore flashed a lot more than FCC rules required (I tested several monitors personally, and can tellyou this is really true.) Therefore stations processed heavily to keep the peak light from flashing (supposed overmodulation) when they probably didn't have to. Eric Small's Mod Minder is carefully adjusted to flash only when the FCC rules require, and thefefore requires less processing to keep from "overmodulating".

That is how he is able to make the claims he does about reduced processing/ increased loudness without overmodulating. (John, yes I know that stations aren't even required to have a modulation monitor per se any more, but the old peak light standards are still used by the FCC as a means of judging overmodulation.)

Again, in Europe, things were different. Since the stations were mostly run by government or quasi-government agencies, there were no FCC inspectors to fine stations, and no peak lights. Most stations used Peak Program Meters, which are much less sensitive to very brief peaks than the modulation monitor peak lights, particularly as manufactured. And brief bursts of overmodulation only bothered other stations of the same government broadcaster, which they were willing to accept, or the broadcaster in the next-door country, which they really didn't care too much about. Therefore, they didn't process so heavy, since they didn't have to keep that peak light from flashing.

For these 2 reasons, and because, until recently, of the lack of competition, the teechnical quality of European FM is much better than US FM.

These problems will also not exist on any digital system chosen, (less preemphasis, no overmodulation in the classic FCC sense) so there will be less need to process heavily. Obviously, there are those who still will, but those who don't won't have to make the heavy - weak signal/muddy signal/distorted signal - compromises to avoid overmodulation.

One other point: Stereo FM using our current system is quite noisy, particularly in fringe areas, due to the noisy subcarriers used. This was recognised when the stereo TV standard was chosen, and the stereo subcarrier was companded. It was too late to do this for FM, as all receivers in usewould be obsolete. What we in essence have is half the companding; the compression

at the transmitter without the matching expansion in the receiver.

Digital radio, by any proposed system, is much quieter.

I'm not saying digital radio is going to instantly make every station sound perfect. There are too many crappy CD's out there also. (I even bought one where you can hear the scratch, 33 1/3 times per minute....) I am saying the potential is there more than with our current FM system.

>guess "WKDQ" is a renamed "WQCY". Can someone verify that for me?

WKDQ is located in Evansville, Indiana. It's possible that their
transmitter is located in Illinois (often, Evansville-market stations are
in fact located in Illinois or Kentucky), but I don't see why they'd ever
be talking about Quincy. Quincy isn't anywhere near Evansville.

What kind of format did they have? WKDQ has gone through several in the
past few years, from top-40 to "favorites from the 60's, 70's, and 80's,"
and currently they're programming country music.

They've also gone through a lot of identities (although always maintaining
the WKDQ call letters). They've included "KDQ," "KQ99," and now "KDQ" once
again. Why you couldn't find the station in your directory, I couldn't
say; they've been around for a long time.

What hasn't been mentioned in this thread (at least I didn't see it)
was WHY the FCC was forcing the abandonment of three-letter calls
at the time the stations were sold. What did it get out of it?
Is it something as trivial and as inane as them wanting a consistent
4-letter-long callsign in their databases of this type of licensees?

Or are they "collecting" three-letter calls, and when all the existing ones
are out of use, they'll be reassigned to some different service or new
application, like HDTV stations or something?

Three-letter calls are also used for coastal marine telephone stations,
in addition to broadcast stations, I believe. Are they used for any other
service currently? (I guess some hams still have 3-character calls, but
don't all of them have at least one numeric in them?)

## 475. WANTED: vintage radio progs, esp. "Lum & Abner"!

Newsgroup: rec.radio.broadcasting
Date: 1993-04-01 23:08:10 UTC
From: Martin W Kuhn <mkuhn@umaxc.weeg.uiowa.edu>
Message-ID: <1993Apr1.230810.5371@gagme.chi.il.us>
Source record: 43360

Anyone out there collect vinatage radio programs?

I _really_ need to find some new episodes of my favorite show, _Lum_&_Abner_! (preferably in fairly large quanities) Sound quality isn't terribly important-- but groups of consecutive shows are a must! (since this is a rather serialized program)

In particular, I'm looking for the end of the "Synthetic rubber / Grandpap has amnesia" story, and some shows I'm missing from the beginning and ending of the lengthy "Diogenes Smith / what to do with the $10000" sequence.

I've already got around 300 15-minute episodes, so I can certainly trade for episodes you have-- I've got well over 400 hours of vintage radio in all, so I might also have other shows that you'd like to trade for.-- [I've been listening to vintage radio for over 10 years now; rather odd for someone only 23 years old, I guess]

Other series I'd particularly be interested in trading for (basically ones that I can't easily get more of otherwise)
- Vic & Sade
- Fibber McGee & Molly (esp. shows from around 1950 and later)
- Dragnet
- CBS Radio Mystery Theater
- Chickenman (past the first few hundred shorts)
- Tooth Fairy (past the first few hundred shorts)

Another item: Does anyone out there have a tape of "The New Stan Freberg Show" aired around Thanksgiving the year before last? I have all 15 episodes of the original show (plus the unaired original version of the first show) so if you're a Freberg fan who wants to trade...

Also, does anyone out there know of any other mail-order vintage radio program sources? I already know of Carl Froelich's "Old Time Radio" and "Echos of the Past", but are there any other good sources?

Thanks,
--Marty

# 476. ** EVERYBODY READ THIS **

Source record: 43364

Why do things like this happen when I am away?

I took a brief (three day) trip to Minneapolis to visit some personal friends and some net friends too. I got delayed and the trip took more like 5 days. I got back at 3:30 AM after an 8.5 hour drive to a backlog of articles, as I expected.

When I logged into gagme to send a brief note letting any posters who may have received uucp letters from clout saying that it could not reach 'airwaves', that everything was received and would be processed tomorow when I was coherent enuff to do anything.

When I got into gagme I found that my entire home directory was gone!

It seems that over the weekend, while I was away making airchecks and having a much deserved break, gagme had a major panic and about half of the user's home directories were damaged or missing.

Naturally, mine was one that was missing totally.. *INCLUDING* the latest version of the Internet Radio Journal mailing list.

I have the list as of mid March, and have most of the new subscribtions saved on airwaves, but it may be a day or two before I can get an issue of the journal out. The sysadmin here has been working feverishly to restore the lost stuff and I am currently setting up another site for posting articles which is directly on the Internet instead of one-hop off, like gagme is.

So, please bear with the situation and rest assured that your articles WILL be posted ASAP. Thanks for your understanding and patience.

NOTE: Airwaves is unaffected by this and all articles will continue to be received as they are sent by you-all.

Thanks and now, I am going to bed! Ive been up for 18 hours.

Bill

## 477. Gene Autry sells Seattle Stations.

Newsgroup: rec.radio.broadcasting

From: briang@halcyon.com
Message-ID: <1993Apr7.204127.10958@gagme.chi.il.us>
Source record: 43365

LOS ANGELES (UPI) -- Gene Autry's Golden West Broadcaters said Friday it has agreed to sell its Seattle radio stations, KVI-AM and KPLZ-FM, to Fisher Broadcasting Inc. for an undisclosed price.

The deal will give Fisher three radio stations in the Seattle market. It already owns KOMO-AM, which has an ``adult contemporary'' format. KVI has a news-talk format, while KPLZ has a ``contemporary hits'' format.

The deal must receive approval from the Federal Communications Commission.

Autry, a former cowboy movie star and singer, has been in the Seattle market since 1959, when he bought KVI.

He still owns two Los Angeles stations, KMPC-AM and K-LITE, along with the California Angels baseball team; the Autry Resort Hotel in Palm Springs, Calif.; Western Music Publishing Inc.; Melody Ranch Music; Gene Autry Records Inc.; and the Gene Autry Western Heritage Museum in Glendale, Calif.

If I remember correctly, Oceanic Cable in Honolulu relayed some (at least
one) FM station over a spare TV channel. The idea was to tune in using the
TV. I heard at least one FM station advertise this fact.

(Incidentally, one hotel I stayed in in Auckland, New Zealand, used such a
system to relay three radio stations over three spare TV channels. It's
a good idea in that it allows you to receive radio without installing an
extra radio receiver, or one of those boxes that only lets you choose three
channels), however, it seems a bit of a waste to have the screen running
blank all the time when all you want is the audio).

In addition, the company also relayed many Honolulu FM services on the FM
band, though these were on different frequencies to those transmitted over
the air. For example, KPOI 97.1 was retransmitted on 105.5.

Source record: 43366

Hi There from Milano, Italy,

We have the need to reverse (copy) standard audio cassettes to Hard Disk via a digital sampling board. Up to now a Mitsubishi DT156 fully programmable 7 cassette auto-reverse (play) to 1 (recording) did the job just fine, until the mechanics wear out and no replacement is currently available. (The trick is to put a special no-tape-endless cassette on the recording side, and the deck will play up to 7 x C120 cassettes, double speed, into the digital sampling board via the output jacks, unattended).

Apart from Mitsubishi, Aiwa and Technics produced similiar multi-cassette decks in the past. Is anyone aware of the present availability of similiar professional or consumer decks on their local markets?

Any help will be appreciated. Pse reply directly, and I will summarize if there is interest. Many thanks in advance.

Date: 1993-04-07 20:41:57 UTC
From: aj008@cleveland.Freenet.Edu
Message-ID: <1993Apr7.204157.10988@gagme.chi.il.us>
Source record: 43368

As if there arnt enough sorry country outlets, WQMX 94.9 in Akron
,Ohio decides to change to a country format.

MIX 94.9, as they used to be called, just yesterday, is no more.
The previous format stunk also, mostly AC like Bolton, Mariah Car
ey, and Genisis.But it wasnt quite as bad as their new selection.

They would probly had a better go of going Top 40, or at least Mo
dern Rock. There is only one Top 40 in the Noetheast Ohio area-96
.5 WKDD Akron.There are already too many Urban stations, and WENZ
is the only Modern Rock outlet.It would have been nice if WQMX wo
uld have gone Modern Rock instead of country.

Well, another chunk of FM spectrum has been thrown in the garbage.

>below 100 %

This is not true, in Europe we use 75 usec. So that contradicts your
statement.
Why the did that? I don't know.

>Again, in Europe, things were different.Since the stations were mostly run by
>government or quasi-government agencies, there were no FCC inspectors to fine
>stations, and no peak lights. Most stations used Peak Program Meters, which
>are much less sensitive to very brief peaks than the modulation monitor peak

>bothered other stations of the same government broadcaster, which they were
>willing to accept, or the broadcaster in the next-door country, which they
>really didn't care too much about. Therefore, they didn't process so heavy,
>since they didn't have to keep that peak light from flashing.

This is not that easy as you may think. Other countries would definately
protest if it gets interference. Then there is our PTT who checks if
those standards are followed. And they definately don't shut their mouth only
because it's a public broadcaster.

They main reason why our public broadcaster didn't compress was the sound
quailty. They just didn't want to mess around with it at all. The guys
strived for the best sound possible, a kind of internal goal setting.

Now, with the appearance of private stations, this attitude has changed.
As to whether the public ones have changed too, I don't know.

Source record: 43369

At first I thought it was a cruel April Fools joke, but today is the 3rd.Those horrible "easy-listening" songs when the dial said 100.3! Where is KQLZ? What did the announcer mean when they said "KXEZ"? Yeccch!!!!

When I read in the paper the other day that KQLZ (100.3 LA) had been sold, I was hoping that the new owners would preserve its format. KQLZ, along with KROQ (106.7) are, or were, the only two interesting progressive rock stations in town. Now we have yet ANOTHER sleepy easy-listening station. What does that make, about 60 of them? KROQ now appears to have a monopoly in LA radio for those of us who could throw up at the sound of oldies, AOR, and easy-listening.

When is someone going to buy a radio station and not play crap just to try and score big in the ratings game? They might be surprised at how well they did if they play some really good music even it is isn't in some rating service's top-40 list.

Now that is off my chest, back to KROQ. The only game in town. If only KXLU had a stronger signal and broadcast decent stuff on the weekends like they do during the week...

Speaking of this, what ever happened to FMX, which was supposed to
compand the stereo subcarrier, if I remember correctly? Back when I
was in broadcasting, I remember FMX being touted as the savior of FM
radio. It seems to have quietly faded away.

On the subject of processing, I was fortunate enough to work at a
college radio station where being the loudest on the dial wasn't
nearly as important as choosing a level of processing which sounded
reasonable as we shifted between college rock, jazz, and other varied
formats. A loosely adjusted Optimod can be a wonderful thing. Throw
in a composite clipper after the STL "just in case", and you can get a
decent sounding station.

It does seem, however, that there is a need for preemphasis. It
seems that our ears are more sensitive to high frequencies than low and
the program content does indeed have a fairly wide variation between
low and high frequencies.

>There is another factor, which is part regulation, and part manufacturer

>overmodulation.)

Here's where I have a disagreement with the FCC. They have
released a letter saying that any monitor that meets the requirements
of the rules on modulation monitors is acceptable, though they have

deleted the rules that give the specifications for mod monitors.
It seems that if they are going to use a spec, that spec should be
public, and in the rules. For example, they gave very specific
measurement techniques for occupied bandwidth for AM stations in the
NRSC ruling.

>One other point: Stereo FM using our current system is quite noisy,
>particularly in fringe areas, due to the noisy subcarriers used. This was

>was companded.It was too late to do this for FM, as all receivers in usewould
>be obsolete. What we in essence have is half the companding; the compression
>at the transmitter without the matching expansion in the receiver.
>
Of course, NAB and someone else who I can't remember right now
developed FMX, which does run a compressed L-R on the 38 KHz subcarrier
in quadrature with the existing uncompressed subcarrier. This should
reduce noise on FM stereo, but I heard there were problems with
improperly aligned stereo demods picking up the quadrature signal, which
they should ignore, and making bad sounds. I haven't heard much about
FMX recently...

Finally, I remember running a station with real slow "gain
riding" compressors years ago. No clipping or any provision for
preemphasis. We just ran flat audio into the stereo generator with
the "compressor" adjusted to occasionally peak the mod monitor. The
total mod meter on the Belar FMM-1 read about 30% average. I imagine
that it could have been run much higher if we'd ignored peaks under
whatever the deleted rules say we can ignore. These high peaks are
going to run us into the next channel (possibly causing interference)
and outside the bandpass of the receiver. So, is it better to just
clip off those peaks or to go outside the receiver bandpass? Realizing,
of course, that the clipping causes high frequency modulation
components, again possibly causing interference.
This FM is tricky stuff....
Somewhat related, one of the advantages of DAB is frequency
diversity. A fade at one part of the channel is not a fade at another,
so the receiver can pull out enough data to give a noise free signal
(thru error correction). I wonder if something like that could be
done with FM. We do have two identical sets of sidebands. If we
have a fade due to multipath, could we reconstruct the signal by
comparing the two sets of sidebands? It'd be a sort of DSP FM demod.

There is still a KHJ-AM in operation somewhere in the greater LA area. I live in the Antelope Valley (i.e. southern Mojave desert) and frequently see advertising for KHJ. I noticed it because it is an old call. KHJ may be in Victorville, I recall.

Source record: 43378

There are 3 new radio stations on Long Island.

WBZO - 103.1 Bay Shore. Good Time Oldies. Apparently they changed their calls from WBSI since it would confuse listeners with WBLI 106.1. They are apparently trying to get to areas that WCBS-FM can't reach.

WEHM 96.7 East Hampton. Partly owned by Billy Joel and Christie Brinkley. Sof AC format.

WBEA 104.7 Amagansett. Known as Beach 104.7. A hot pop and oldies sound that used to be carried by WHFM.

GERMANY/USA: It's been reported that the new Clinton administration will propose the merging of Radio Free Europe/Radio Liberty into the Voice of America. The president of the two stations, Eugene Pell, has told the RFE/RL Works Council that the proposal is for the two stations to cease operations on October 1, 1995.

There have been a number of protests: the Chairman of the Latvian Supreme Council, Anatolijs Gorbunovs, has appealed to President Bill Clinton not to close the two stations, saying they have been a significant force in the process of gaining independence in Latvia, and the rebirth of democracy there is not completed yet.

The US-based Nobel Prize winning Polish writer Czeslaw Milosz has also appealed for the two stations to stay on the air. Although the Cold War has come to an end, he argues, a source of sound objective information is still very much needed in the areas of central and eastern Europe hit by civil wars. (BBCMS via SCDX)

In a commentary distributed by the Los Angeles Times Syndicate, William Pfaff, who worked for the RFE/RL supervisory organization when it was run by the Central Intelligence Agency, says RFE has recovered from "a not wholly undeserved reputation for recklessness and Radio Liberty for a reactionary and fairly mindless anti-Communism." He says that while the need for the stations in some countries with new and democratic press services has diminished, this is not the case everywhere.

The VOA's Audience Research Officer, Dr. Kim Elliott, has written an article called "International Broadcasting on a Budget", supporting the merger, pointing out that VOA and RFE/RL share 17 languages in common, which he says is a great waste in resources. He adds that the United States spends more than twice as much as the BBC for international broadcasting, nevertheless, employing only half as many journalists, and attracting half the audience.

He also argues against the proposed introduction of a new Radio Free China, and calls for the creation of a new autonomous American international broadcaster. Dr. Elliott also points out "VOA is alone among international broadcasters in that it does not include broadcasting to its fellow citizens abroad as part of its mandate",

and urges that the US government avoid competition where the private sector can do the job, a clear reference to CNN. (SCDX)

GERMANY: Deutsche Welle is to take over all German external broadcasting with effect from July 1st. It will take on all the responsibility it currently shares with Deutschlandfunk. It is expected that Deutschlandfunk will become solely responsible for home broadcasting within Germany (Dale Vanderpoel via Shortwave Paradise BBS via InterNet)

GREECE: Voice of Greece is on the air in English to Europe and America at 1540-1550 on 15630, 15645 and 17525 kHz, 1903-1915 on 7450 and 9375 kHz, followed on the same frequencies in French at 1915-1930 and German 1930-1945. (Dale Vanderpoel via Shortwave Paradise BBS via InterNet)

ITALY: 7379.8 Idea Radio, Genova is a new station on shortwave. The station is very anxious to get reception report, says Technical Manager Mr. Laudicina. 2 IRC's are required and they asks to wait 60 days to print QSL-letters. Address is P.O.Box 38, 16030 Gattorna (Genova) or Via Elsa 11/2, 16152 Genova. Power is 500 watts. (Play-DX)

9420 R Europa Internazionale, Brescia was active during Christmas 1992, but is now inactive. Address: Via Gerardi 6, 25124 Brescia. (Play-DX)

1502v R Yoga Network, Bologna is a new station. Broadcasts 1230-2000 Monday-Friday and 0600-2000 Saturday-Sunday. Address is P.O.Box 610, 40100 Bologna. Phone: +39-51-371 832. Director is Renzo Samaritani. The station is operated by the Hare Krishna Movement. (Play-DX)

1548v Paper Radio/Top Italia Radio, Vicenza (ex-Key Radio) (ex-ex-R.N-O-I 1553v). Address is Viale Trento 200, 36100 Vicenza.

1318 R Campogalliano is announcing as "Radio 107". (Play-DX)

7294 R Europe, Pioltello in USB-mode 0800-1300 and on 25900 in USB at 1300-2000. (Play-DX)

MONACO: R Blagovest broadcasts in Russian via Monte Carlo: 0730-0800 on 12020 on Sundays and 1850-1950 on 7385 (Mondays to Saturdays). The TWR schedule doesn't list these. Address: Catholic Radio and TV Network, 32-34 Rue de l'Association, B-1000 Brussels, Belgium (NR via Australian DX News)

Trans World Radio's summer schedule: In Dutch: 2015-2030 on 1467 kHz (only Monday). In English: 0640-0820 on 9480 kHz (Sundays until 0845), 2030-2130 on 1395 kHz (except Saturday & Sunday), 2200-2230 on 1467 kHz (Sunday until 2300). In French: 0230-0300 on 216 kHz. In German: 0345-0415 on 1467 and 6230 kHz, 0730-0745 on 7160 and 9795 kHz (Sundays until 0815), 1005-1020 on 7160 and 9795 kHz (not on Sunday), 1330-1400 on 7160 and 9795 kHz, 1900-1930 on 1395 kHz, 1930-2000 on

6230 (until 2015 on Sunday, Monday and Tuesday), 1930-2015 on 1467 kHz. (Dale Vanderpoel via Shortwave Paradise BBS via InterNet)

NETHERLANDS: Radio 3 on 675 kHz MW is no longer available. In the next few months the Ministry of WVC will determine which commercial radiostation will use this frequency. Radio 3 is the national popmusic radiostation now only transmitting on different FM frequencies throughall the country.

Netherland's Minister of Culture Ms. D'Ancona has decided to continue broadcasting Radio 1 on 747 kHz AM, because of protests of truck-drivers and Dutch people, living in foreign countries. This decision may be not right according to European rules for stations transmitting on AM and FM at the same time. But now radio 1 (Dutch newsstation) is broadcasting on both bands. (Remco A.Rutten)

NORWAY: cf. Svalbard!!!

RUSSIA: Radio Seven (Sem) is a new independent radio station in Samara. Address is Gagarina 6A, 443079 Samara. Programs in Russian, Tatar, Mordiv, Chivash, German, Polish and Yiddish have been heard. It operates on 6115 kHz 0600-0700 daily, 0700-0800 Saturdays & Sundays. Also heard at 0500 and 1300. At other times the station carries R Kazan programs. The power is 5 kW (some sources says 200 kW, but those are probably wrong). (Australian DX News)

R Alpha & Omega has expanded its schedule to 1400-1600 on 9795 kHz. (Australian DX News)

R Art has also the address Treskaya 29 korp 1, Moscow 103050. President is Mr. E.Sotnikov. Current schedule is 0400-0700 on 11665 and 1500-1800 on 11700. (Australian DX News)

R Diapzon, Perm in Russian on 5290 kHz at 0430-0500 is a new station. (Anatoli Klepov via Play-DX)

9880 R Galaxy announces an address P.O.Box 7, 117418 Moscow. (BBCMS via FK in SWN)

R Rukhi Meroc (Spiritual Heritage) address: Islamckiy Tsentr g. Moskva i Moskovskoy Oblasti, Vypolzov per., d.7, 129090 Moscow. Telephone is +7-095-281 49 04. Broadcasts on Fridays at 1600-1645 on 1089, 4055, 17890 in Tatar. V/s is Sheykh Ravil Gaynutdin. (Anatoli Klepov via Play-DX), (Yoshinori Kato via Orbita)

DW current schedule over transmitter in Samara : 0300-0355 on 12055 in Pashto, 1000-1050 on 17735 in Persian, 1400-1800 on 7315 in German, 0200-0250 on 12055 in English and 0800-0850 on 17675 in Dari. In addition there are some transmissions from Novosibirsk and Irkutsk. (R.Rudnev via Australian DX News via SWN)

R Nadezhda lists this schedule from March 7th: 0800-1100 on 630, 6050, 15460. At 1500-1800 on 7390, 9490, 11870, 11910, 17675. 1500-2100 on 1440. 2000-2300 on 1215 and 5905. (NR via Australian DX News)

The name 'Radio Moscow' is going to disappear as from March 28. A new name is mentioned as "Russian Wave". Uncertain is if all languages used will be continued. (Dale Vanderpoel via Shortwave Paradise BBS via InterNet)

Voice of the Assyrians, Moscow is transmitting at 1600-1630 (Wed/Sat) on 1170, 1494 and 5905 kHz. Address: Pyatnitskaya Street 25, Moscow, Russia. (Dale Vanderpoel via Shortwave Paradise BBS via InterNet)

SLOVAKIA: Slovak R foreign service broadcasts in Slovak, English, French, German and Russian. In English the stations transmits as follows: 1130-1157 on 7345, 9505 and 11990. 2030-2057 on 7345. 0200-0227 on 5930 and 9580. All times are CET! (BBCMS via FK via SWN)

SVALBARD: Norwegian coast radio stations are going to start relaying "Dagsnytt"-bulletins of NRK. Stations are: Vardo Radio on 1713 and 1737 kHz, Hammerfest Radio on 1635 kHz and Svalbard Radio on 1731 kHz. All are USB. Vardo and Hammerfest broadcasts at 1033, 1600 and 2233 UTC and Svalbard at 0700, 1500 and 1900 UTC. It is also possible that for example Jan Mayen and Hopen will join later! (DX-News)

UKRAINE: R Lugansk has a local program 0500-0530 and 1600-1615 on 7246 and 1485 kHz. (Russia DX Club via Orbita)

R Ukraine International is scheduled in German at 1800-1855, 2100-2155 and 0000-0055 on 6010, 7240, 9675, 9710, 9860, 11770, 11960 and 15195 kHz. In English at 2200-2225 they use the same frequencies. (Dale Vanderpoel via Shortwave Paradise BBS via InterNet)

A station announcing "Hovorit Ivano-Frankjevsk" was heard on 1584 kHz in Finland. What station is this? I haven't seen any news about it yet. (RKO)

UNITED KINGDOM: Wye Valley Radio have won the franchise for High Wycombe. The program format will cater for a pre-dominantly middle aged audience, with oldies and classical/easy listening music. They plan to commence broadcasting on September 1st, 1993 on 1170 kHz. (Contact)

Offshore special event station Radio North Sea is on the air in April in Edinburgh. The station is in the ship and broadcasts on 1602 kHz. (Bernt Erfjord in DX-News)

KCBC Kettering/Corby is now on 1584 kHz (ex-1530) because of QRM from Vatican Radio on 1530. They have also increased their power. (Bernt Erfjord in DX-News)

630/1161 BBC Three Counties Radio is the new name for Radio Bedfordshire. (Bernt Erfjord in DX-News)

The BBC and Radio Korea will begin relays from each other's transmitters on May 1st. Radio Korea's English service will be relayed from Britain at 2030, with French at 2100 and German at 2145. The BBC will be relayed from South Korea in English at 1300-1400 and in Chinese at 2200-2300. Beginning July 1st, each station will add an

extra hour relay, with Radio Korea's Korean service from Britain at 0630 , and the BBC's Cantonese service from Korea at 2300. However, the frequencies have not yet been decided. (Radio Japan via BBCMS via SCDX)

Best 73s!

## 494. 'Talking' For sale signs?

Newsgroup: rec.radio.broadcasting
Date: 1993-04-10 20:50:31 UTC
From: Julian Lorkin <9LORKIN@WINVMJ.VNET.IBM.COM>
Message-ID: <1993Apr10.205031.28233@gagme.chi.il.us>
Source record: 43381

Hi,
This is probably going to sound like a very silly question for people in the US, but I'm in the UK, and just at the moment I've been having a debate with other engineers at the local station, sparked off by finally having got hold of Panaxis' catalogue.
Just to recap, Panaxis make an all manner of radio goodies, from SCA decoders, to PLL FM and AM transmitters. They also export equipment, kits and plans to - well anywhere in the world I guess; it only takes about 4 days for stuff to arrive after I phone an order.
Anyhow, in the catalog quite a lot of the kits seem to be for 'Real Estate' transmitters, in other words talking 'For Sale' signs! This all rather makes my mind boggle, and people to who I've shown the cat are having real problems trying to come to terms with the concept. Surely there is not so much free bandwidth in the States that anyone trying to sell their house can set up a radio station? Or is it that these people are so desperate to unload their houses that they quite happily go pirate?
So, if anyone feels like enlightening me, and stopping my brain for boggling, please do!

[Moderator's Note: I am sure these 'transmitters' are limited to a couple hundred foot range. I doubt they are considered 'pirate'. Bill]

What is the current opinion on the sensitivity of GE SuperRadio III?
I just saw a whole bunch of SuperRadio III in a local store going
for about 50 bucks. Is it a good deal?

## 497. Re: Radio Home Shopping Station

Newsgroup: rec.radio.broadcasting
Date: 1993-04-10 20:50:46 UTC
From: fybush@world.std.com
Message-ID: <1993Apr10.205046.28262@gagme.chi.il.us>
Source record: 43383

I've had an opportunity to hear 60 minutes of the new radio home-shopping station on California's Central Coast (KIXT-1400 San Luis Obispo)... thanks, Harold! :-) And now, some initial thoughts...

The station owners clearly take a dim view of AM sound quality. Not only are the phoned-in want ads of telephone line quality (of course), but the station IDs and instructions are digitized at the same (8 khz?) sampling rate! So are the "real ads" from Time-Life Records and the like. It sounds pretty bad.

Callers to the station apparently get to select a category for their ads to run in, but there's no mention on air of what category any given ad is supposed to be in. I would have liked to have heard some sort of HSN-style "Now the help-wanted ads" or somesuch.

The station's 900-number is not apparently 100% with-it on recognizing the touch-tones that are supposed to mean "stop recording now!" I heard a couple of messages that ended like this....

"(TOUCH-TONE)...long pause...did that work?...I'm not sure that worked... I hate talking to computers..."

It also appears that there's no way for callers to cancel their message after it's been recorded.

Now what I'd like to see is someone with the imagination to use this technology for more than just shopping. Imagine..."Public-Access Radio... your program can be on our air for just $3 for the first minute, $2 each additional minute." THAT I'd like to hear!

And with duopoly, a station like this can be run for the cost of the equipment, the power to the transmitter, and the 900 number. No sales staff, no traffic staff, no talent, not even anyone in master control if you have another station already on the premises. This could get VERY interesting.

I know our Moderator has heard a KIXT aircheck as well...so, Bill, what'd you think?

[Moderator reply: Well I listened to about 20 minutes and I agree with Scott on the bad quality. Another very annoying thing is the LONG pauses between ads. Some were seperated by 10 or more seconds!. They should be cued closer together, or else have a music bed between them. In short, it is a nice idea that needs a bit of fine tuning. But a good bravo goes out to anyone who has vision enough to do SOMETHING innovative, even if it does need a bit of work. Someone should start an agency that specializes in these little automated 'turnkey' formats and offer their services to starving

little AM's (especially those which sit in simulcast with their FM's just to save money. Bill]

Scott Fybush -- fybush@world.std.com

## 498. WQMX Akron - Format change

Newsgroup: rec.radio.broadcasting
Date: 1993-04-14 05:03:51 UTC
From: sjsobol@wariat.org
Message-ID: <1993Apr14.050351.3828@gagme.chi.il.us>
Source record: 43386

This is in reply to Aaron Barnes's note about WQMX going country. The article just expired so I can't quote it...

He said that it should have gone top 40 or modern-rock. Actually, it most definitely should NOT have gone top 40. The Cleveland-Akron market has consistently proved that it can't handle more than one CHR station at a time. In the late 70's/early 80's there were WGCL and WRQC, and WGCL folded. Then Power 108 challenged WRQC, and WRQC folded. Then WKDD changed from AOR to top-40 and Power 108 eventually folded. Interestingly, when WKDD went top-40 Hot 101 in Youngstown went the other way... and now that there is only one top-40 station in Cleveland/Akron, they have switched back.

However, Youngstown is an hour away from Cleveland and 45 minutes from Akron, so it is really not part of the market. (Plus, I can't get it too well on my radio in most parts of the city... it fights with WRIF!!! Go figure! -- WRIF is in Detroit.... 3 1/2 hours NW of here... same freq. as Hot 101.)

As for modern rock, I don't think the format has necessarily proven itself to the point where Cleveland is ready for two modern-rock stations...

## 500. Does your station want to hear fresh Australian music?

Newsgroup: rec.radio.broadcasting
Date: 1993-04-14 05:04:54 UTC
From: brian@mel.dit.csiro.au
Message-ID: <1993Apr14.050454.3871@gagme.chi.il.us>
Source record: 43388

This message is to tell you about a free service put together by
Australia's Music Export Initiative, and 2 well informed radio people
(the latter means good quality so-called "indie" type music gets on there
as well as 'just what sells quite well here')

The show's called "The Big Backyard" and has been producing a show per
week (now up to show #54) which is now produced on CD, 2 shows a CD.

The show is _already_ distributed to 500+ radio stations worldwide. Here's
the official blurb.

---
"The Big Backyard is a 30 minute radio series of new music exclusively
featuring Australian recording artists, including interviews and Australian
Music news. The series is available weekly on CD to radio stations around
the world _free of charge_. Big Backyard News, a monthly publication
produced in conjunction with the Big Backyard, talks about the export of music
from Australia and advises of overseas tours and new releases. It is
distributed to 4000 media and music industry personnel worldwide free of
charge.

The Big Backyard is recorded in Sydney ot 2MMM, and is presented by Australia's
leading authority on Australian new music, Mark Dodshon. Mark earned this
reputation as host of the acclaimed Australasian Music Show on 2JJJ FM and
as presenter of Edge Of The Wedge on the national Australian TV network
ABC TV. Mark later joined Sydney's top rating radio station, 2MMM FM and
was responsible for introducing Aboriginal music as a regular to their
Australian music program, homegrown. Producer of The Big Backyard, Laurence
Boswell, has been involved with numerous radio features on Australasian
new music and culture - including that as the former host of the New Music
Show on New Zealand's ZMFM National radio Network"
---

Upcoming editions of The Big Backyard feature the music & muse of:
The Mandelbrot Set, Pray TV, Barb Waters & The Rough Diamonds, Barefoot,
Daisygrinders, G W McLennan, Sea Stories, Kim Salmon & The Surrealists,
Scarlet, Ratcat, The Lab, Jeremy 'Ponytail' Oxley, Club Hoy, Crow,
Louis Tillett, Paul Kelly, Clouds, Big Heavy Stuff, Soulscraper, Frente,
Dazychains, Mixed Relations, Conway Savage, Hunters & Collectors, The
Aints, Ed Kuepper, The Bo-Weevils, Painters & Dockers, Nick Cave & The
Bad Seeds, Yothu Yindi, Tiddas, Tumbleweed, Glide, Godstar, The Moles,
Dog Trumpet, Kev Carmody, You Am I, Wild Pumpkins At Midnight, Bughouse,
Things Of Stone & Wood, Tlot Tlot & Swordfish.

---

Interested? If you want to receive either the show and/or the radio programme,
there are 2 ways to do so.

I believe the Europeans use 50 usec preemphasis which is up about 13.66 db at
15kHz. The 25 usec preemphasis you mentioned was used with DOLBY FM in the
USA.

The presence of preemphasis does not require processing of the entire audio
band to eliminate over modulation due to preemphasis. There once was a time
when people controlled the preemphasis problem by processing only the audio
above 2 kHz. Of course those were more inocent times.

I don't see how a digital media is going to change the desire to be the loudest
station on the dial. Nothing will change when digital radio arrives, unless it
gets worse because the "modulation" limit will be absolute at "100%." In the
digital age there will be no "flash" count to fudge. The only way to sound

louder will be processing.

John

## 502. Re: Radio over Cable TV wire

They had the same thing at the hotel I stayed at in Finland -- channels
1-4 were the four TV channels, while channels 11-14 were the radio
stations. Of course, I couldn't understand a single word of what was
being said.... :-)

--Ted Schuerzinger
zed@Dartmouth.EDU
No, I don't have anything witty to say.

## 503. Compression on FM, etc.

Newsgroup: rec.radio.broadcasting
Date: 1993-04-14 05:15:36 UTC
From: Robert Carpenter <rc@cmr.ncsl.nist.gov>
Message-ID: <1993Apr14.051536.4058@gagme.chi.il.us>
Source record: 43391

In addition to all the technical discussion about preemphasis curves, etc., there is probably another reason that compression will NOT go away, no matter how much better digital transmission is than our present systems.

The reason:
A very large portion of radio listening takes place in automobiles. Automobiles are a noisy environment - at least 20 to 40 dB more noise than in a typical home environment. Unless the car listener runs the gain so high that the louder passages are deafening, the softer ones will be inaudible because of the ambient noise.

The counter-arguments ;-)
1) Current popular music doesn't have "softer passages".
2) "Serious" car radios have 250 W of audio, and thus can overcome the noise.
3) Listeners to current popular music have so deafened themselves from too-loud music that they can't hear the ambient noise and NEED the 250 W of audio.

My house is almost 30 meters from the street and I find an occasional passing car whose radio is louder in my living room than the one I'm listening to - with my windows closed.

IMHO, a better solution will be to NOT compress at the source, and to offer compression as a "feature" in (car) radios. Think of all the advertising hype that could attend this feature in its infinite variations!

> --Aaron

Meg Griffin got pushed to 10pm-2am to make room for Grease back in January.
Meg occasionally hosts various specials on the cable music channel VH-1.

Grease is currently heard in these cities :

Los Angeles(home base;live3-7pm)
New York(live 6-10pm)
Philadelphia(currently live 6-10pm;starting on 4/12 he'll be on
tape-delay after WYSP starts replaying repeats of Howard Stern's morning
show at 3pm until whenever; Yes,Howard will be *twice* a day in Philly)
D.C. (tape-delay 7-10pm)
Atlanta(tape-delayed until next morning's AM drive; Friday night's show
is heard on Monday morning)

-Mark

## 506. Whiter KPLA-AM, Riverbank, CA?

Newsgroup: rec.radio.broadcasting

> When I read in the paper the other day that KQLZ (100.3 LA) had been sold, I
> was hoping that the new owners would preserve its format.

Pirate Radio was a perfect example of a bunch of New Yorkers coming
into town with major attitude and all the answers. When will east-
coasters learn that it takes more than a couple of accidental good
books in New York and some "killer formula" to succeed in radio in
other places in the country. I am only surprised that it lasted as long
as it did. What little I heard of it when traveling to the area was
INCREDIBLY boring.

> When is someone going to buy a radio station and not play crap just to try and
> score big in the ratings game? They might be surprised at how well they did
if
> they play some really good music even it is isn't in some rating service's
> top-40 list.

This will happen when the price of radio properties comes out of the
stratosphere. Until then, owners will have to "play it safe" and not
take chances on a format that might not make the station number one in
the first book after the sale.

[Moderator's Note: Of course, West Coast'ers NEVER have the 'know-it-all'
attitude, do they :-)? Bill]

Actually the dynamic range of the Hi-Fi VHS exceeds that of a compact disc by

a few dB (i'd have to go home and check to get the actual numbers). It is my choice medium for recording radio programs (concerts, weekly specialty shows) and it works well if you feel like making a 6 or 8 hour recording of Brian Eno or other cerebral music for studying. As far as using VHS Hi-Fi in the studio, I
would imagine that cueing the tape might be a bit tricky. Now if you use the linear track (non-hi fi) then you end up with a dynamic range comperable to AM radio. Another word of warning, make sure you record some video signal in order to provide the sync signals necessary to maintain tracking.

In the US, there's a portion of the FCC rules that states that persons
who want to transmit on AM/FM broadcast (and I think, between 140-150
KHz) frequencies at low power (100 milliwatts, I think) are allowed to
do so on as long as they don't significantly interfere with local
broadcasters. I think the antenna length is limited to a few feet as
well. (stating as opinion as I don't have the FCC regs in front of me)
This limits the effective range to about what the moderator says it is.
It isn't a matter of free bandwidth, it's a matter of public access to
the airwaves.

[Moderator's Note: The band you are refering to, at last reading by me,
allowed 1 watt of power into a limited antenna. The talking for sale signs
use the standard broadcsat bands, not long wave. Not too many people would
be sold by a signal on that band :-). Bill]

AM 930 in LA calls themselves "KHJ"...but their calls are really
KKHJ(AM). Listen near the top of the hour.

Same deal with AM 980 in Washington DC. WRC(AM)'s calls had
to be changed when NBC sold the station in 1988 (and kept
WRC-TV), so it became WWRC(AM)...but it's still known as "WRC"
on the air.

I believe that the 3 letter calls are also used by coastal telegraph
stations.
I don't know how many of them are still around.

As to amateur radio call signs, they all include a numeric. In the US, they
are made up of one or two letters. The first is K, W, N, or A. If the first
character is A then the second character must be a letter from A to L (as i
recall). Next follows a single numeric and one to three letters.

## 514. [UPI] ACLU calls FCC indecency standards unconstitutional

Newsgroup: rec.radio.broadcasting
Date: 1993-04-16 21:14:11 UTC
From: kadie@cs.uiuc.edu
Message-ID: <1993Apr16.211411.20874@gagme.chi.il.us>
Source record: 43405

Copyright 1993 by UPI. Reposted with permission from the ClariNet Electronic Newspaper newsgroups clari.news.issues.civil_rights and clari.news.issues. For more info on ClariNet, write to info@clarinet.com or phone 1-800-USE-NETS.

CHICAGO (UPI) -- The American Civil Liberties Union says the Federal Communications Commission's indecency restrictions are unconstitutional.
The ACLU said Friday it will intervene in a case involving WLUP disc jockeys Steve Dahl and Garry Meier, who are accused of violating the indecency rules by using material that implied sexual or excretory functions through double meanings and innuendo.
WLUP is owned by Evergreen Media Corp., which refused to pay $4,000 in fines imposed by the FCC for comments the duo made in 1987 and 1989.
The ACLU accused the FCC of violating the First Amendment and constructing a definition of indecency that is so vague it has a chilling effect on broadcasters.
``This statute...forces broadcasters to become self-censors or face arbitrary fines leveled by the FCC,'' said Harvey Grossman, legal director of the ACLU of Illinois and legal counsel for the interveners.
``Under this indecency statute even educational programs dealing with human reproduction or AIDS awareness could be barred from the airwaves.''
The long-running battle over ``indecency'' in television and radio began in 1978 when the U.S. Supreme Court legitimized the FCC's indecency rules for the broadcast media.
According to the rule, indecency is ``language or material that, in context, depicts or describes, in terms patently offensive as measured by contemporary community standards for the broadcast medium, sexual or excretory activities or organs.''
The ACLU said ``patently offensive'' cannot be sufficiently defined because of varying community standards.
The ACLU said the FCC's fines are arbitrary. It noted that before August 1991, the commission regularly proposed and imposed penalties of $2,000 per violation but after that adopted a policy establishing a base fine of $12,500 per violation.
In October 1992, the FCC issued a fine of $105,000 against Greater Los Angeles Radio, which was eclipsed last December 1992, when the commission issued a fine for $600,000 against Sagitarius Broadcasting Corp.
The ACLU called the FCC actions ``schizophrenic.''
``Shortly after the commission sanctioned Evergreen, it dismissed several complaints involving speech far more graphic and explicit than that for which Evergreen was fined,'' the ACLU said.
``For example, a complaint was dismissed against a radio talk show host who discussed the rubbing together of female genitalia and another

complaint against the 'Geraldo' show for discussing penis size was
similarly dismissed.''
Grossman said the FCC has ``no coherent guidelines to determine
whether a broadcast is indecent.''
``The commission's standard of indecency is at best a moving target.
The commission is willing to modify and expand the definition of what is
indecent with each notice it issues,'' Grossman said.

I erred.

The "KHJ" that's being promoted around California's Antelope Valley is _not_ KKHJ Los Angeles, which has a spanish-language format. It's KHJJ (AM) Mojave CA, AM 1380.

My point still holds: The KHJ calls are dead, and while it's easy for a station to call itself "KHJ", once an hour the truth must still come out.

[Moderator gasps, chokes, grasps chest and stares in amazement at his terminal: "What!?!? Scott made a .. mistake ..?!?!? No, it can't be! :-) Bill]

>INCREDIBLY boring.

Actually, KQLZ went through three distinct stages:

First, as you were referring to above, the first stage was with N.Y. DJ/PD, Scott Shannon. This period lasted from March 17, 1989 to February 14, 1991. This format was the new "rock 40" format. Actually, "Pirate Radio" during this time did quite well. Their Arbitron ratings were in the top five for awhile. I think LA listeners were growing sick of KIIS FM and "Power 106" (KPWR) and wanted something new and innovative, and this station was it.
The main problem with the first "Pirate Radio" was that their playlist was incredibly limited since there were not many songs available that fit into their format. At any time, I could have probably named off three-quarters of their playlists. Over and over and over...

Anyway, once the Arbitrons dropped Pirate Radio into fifteenth place or so, Westwood One figured out that Scott Shannon was not worth the millions that they were paying him, so they dumped him. Enter phase 2...

For some stupid reason, KQLZ decided to keep the "Pirate Radio" monniker even though they changed from rock 40 to traditional album rock. This period lasted from February 14, 1991 to December 28, 1992. Not much to say about this period. Just your normal average album rock radio station. The ratings stayed consistently bad. Even grabbing PD Carey Curelop from KLOS, which was doing quite well, did not help.

That brings us the last short stage of KQLZ. Around December 28, 1992, KQLZ finally dropped their "Pirate Radio" slogan and were simply (and stupidly) called "100.3". Yawn.... Anyway, I didn't listen to the station much at all during this time, but I believe the station added alternative rock to their playlists. Incidentally, this period and part of "Pirate Radio" II had PD Greg Stevens come up from some album rock station in San Diego.

Finally, KQLZ died on April 3, 1993 as Westwood One finally got rid of their money-losing station.

Anyway, that's it.... Incidentally, how does Scott Shannon sound at WPLJ in New York. Same old "Morning Zoo" show?

Later,
Jonathan Lin

> [Moderator's Note: Of course, West Coast'ers NEVER have the 'know-it-all'
> attitude, do they :-)? Bill]

West-coasters tend to "know it all" when it comes to the West Coast. And admittedly, the arrogance quotient can be high. But it is not exported. East-coasters believe that their revealed truth is universal and applies everywhere. Ever notice how "New York centric" network news coverage is? It is as if the whole country hangs on everything New Yorkers say or do.

I could go on and on. But as bad as the attitude may be here, no one is deluding himself about the scope of concern. We fully realize that the rest of the country is oblivious to what goes on here in the west.

[Moderator's Note: Acually, John, many in the midwest see the west coast trend setters in the same sort of light as you see the New Yorkers. I am not included in that group, but there are some advertising campaigns that have to do with "I Hate California". I guess it can be sufficed to say that whenever one regional culture 'invades' another there can be hard feelings. But this is not 'soc.culture.*' so I'll shut up now :--) Bill]

As per a recent article in RADIO WORLD make sure the unit you purchase
has a numeral 3 in the second digit of the date code on the box or
in the battery compartment. I have purchased two units built in late
1992 (a 2 date code) and returned them both due to sensitivity problems.
Units sound excellent in the AM wide mode, flat to at least 7.5 khz.
But distort easily and are difficult to tune near transmitters. They
also seem to pick up noise from digital paging systems rather easily
too.

Real Estate sales in the northeast of the US is tough due to the over-inflated prices. A house today runs 2-3times its worth. This is due to spending during the 80's and people trying to get what they paid for their house, which will not happen in these economic hard times. They especially don't want to pay as much as 10% commission to a real estate broker.

One way to give you a selling advantage is to us the type of sales devise you described. They go by the name "Talking House", "Listen to me" and other things like that.

Basically, they are small AM transmitters tuned to a clear frequency for the area. I've seen them as 15 watts hooked up as carrier current (using the electrical lines as the antenna and VERY Legal) with a continuous cassette tape (answering machine type) used to describe the features of the house and how to get inside. People will place an ad in the paper pointing out that anyone can drive by and listen to the message, then make an appointment to see the rest of it. The tx is rented to the seller on a weekly basis and installed by the tx owner. They are normally two-way shops so they tend to sound better than john doe who bought it to make money.

As for success rates, I've heard good and bad. Messages on the tapes can be misleading or misunderstood. Scripting is VERY IMPORTANT. The seller is normally the announcer on the tape and is free to change the message anytime they wish. This is also good and bad.

I guess it comes down to the bottom line..... would you rather spend $1000 on the use of a system and sell the house or pay the 10%. It all depends on how much you want from the sale of your house,

Rob

>Julian Lorkin
>9LORKIN@WINVMJ.VNET.IBM.COM

The FCC does allow "talking signs" for selling real estate. The
transmitters have to be FCC approved and cannot have an input power
greater than 100 milliwatts or a transmission line plus antenna
length greater than 3 meters. This limits the reception to not
much more than 50 meters.

Yes, in fact these do exist and are in use, at least in the San
Francisco Bay Area in California. The one I've heard was on 530 AM and
had a range of a few hundred feet. A big sign out front read "This
house talks. Tune to 530 on your radio for details". Most of the
"details" were about how to contact the real estate agent to get your
house listed, and how neat the radio system was.

As far as I can tell, the house did not sell. The sales contract
expired, and the radio went away.

Message-ID: <1993Apr16.212222.21307@gagme.chi.il.us>
Source record: 43413

I'm a bit surprised that these seem to be unknown to the list membership... A couple years back, Glenn Hauser had an item about these low-power transmitters on one of his "World of Radio" programs. They operate under the usual FCC provisions for low-power operation in standard broadcast bands -- I think these come in both AM and FM flavors. I've never run across any of these here in the St. Louis area, but then I don't spend much time in the suburbs where the higher-priced houses are being peddled, or new developments are built, which are more likely to use such techniques.

Usually, they are set up with a tape loop and there's a notice on the "for sale" sign outside to tune your car radio to frequency "x" to hear the real-estate agent give a spiel about how great the house or the development is.

I don't know if the thing is set up to use a self-contained antenna or if any sort of outside antenna is connected, but I would bet the former. Not only would the manufacturers find it much simpler to ensure they meet FCC field-strength specs by having the whole unit in one integrated package, but I know I wouldn't trust the average real-estate agent to do anything technical, like connecting a separate antenna.

I believe the agent just sets the frequency for something not used in the area, as opposed to using 530 or 1610 kHz on AM as if it was a Travellers' Info Station setup. It might be that the things are fixed-tuned from the vendor, but I would think that would limit their flexibility too much.

To Julian Lorkin: so it's not that these are "pirates", and they don't tie up dedicated frequencies. They operate under the same low-power exemption that things like "Mr. Microphone" or the Ramsey FM-10 do. It's up to the operator to not interfere with licensed operations in the same area. Of course, as a practical matter, with the FCC currently cut back so much that they don't even take CB-interference complaints any longer, if some idiot sets up one of these in a manner so that it DOES interfere with legitimate licensed services, I very much doubt that there will be anybody around to officially do anything about it. In that case, the individual's only recourse is some Direction Finding and a little Breaking&Entering to silence the offending unit...

Regards, Will

# 525. WWCR BURNS TO THE GROUND

Newsgroup: rec.radio.broadcasting
Date: 1993-04-16 21:22:31 UTC
From: gst@gagme.chi.il.us
Message-ID: <1993Apr16.212231.21326@gagme.chi.il.us>
Source record: 43412
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Recently Scott R. Weis (KB2EAR) sent out an article about a new
communications show that would be starting soon on WWCR Nashville and
the LTRN satellite network. His article was written April-10. This
gives me the impression that many people have not yet heard what happend
at WWCR.

A fire completely destroyed the station Sunday morning April-4.
Everything was lost in the fire. All 3 shortwave transmitters
and thier 5-kw xmtr used on thier local station WNQM, along with
all financial and business records..everything.

Thanks to loaner equipment from other local stations, WNQM is back
on the air with 1-kw operating from a trailer.. They hope to have
at least 1 Shortwave transmitter back in about 2-weeks...but
that will be booked all of the time with Dr. Gene Scotts programming.
Second one should be on line in about 6-weeks.

No exact cause as to what started the fire, but there is a strong
feeling that it may have been faulty electrical wireing(sp) between
the second and the just installed third trensmitters.

## 526. Where have YOU heard WBZ?

Newsgroup: rec.radio.broadcasting
Date: 1993-04-16 21:29:32 UTC
From: fybush@world.std.com
Message-ID: <1993Apr16.212932.21566@gagme.chi.il.us>
Source record: 43414

Our research director and promotions manager sent around a memo
today listing all the cities where WBZ got Arbitron diary credit
in the latest book. I reprint it here in full:

Boston MA; New York NY; Washington DC; Baltimore MD; Columbus OH;
Hartford CT; Providence RI; Warwick RI; Pawtucket RI; Rochester NY;
Worcester MA; Springfield MA; Harrisburg PA; Wilkes-Barre PA; Scranton PA;
New London CT; Portland ME; Altoona PA; Portsmouth NH; Manchester NH;
Salisbury MD; Ocean City MD; Roanoke VA; Utica NY; Fayetteville NC;
Waterbury CT; Augusta ME; Cape Cod MA; Battle Creek MI; Trenton NJ;
Parkersburg WV; Charlottesville VA.

Now I'm flattered we're heard so regularly in so many places...and
by enough people to garner Arbitron Credit...but now help me
blow the socks off my promotion director! Drop me a piece of e-mail
telling me where you've heard WBZ, and I'll pass the word along to
Frank.

What the heck...I can probably even work up a reward for the most
distant claims of reception (Are you listening, Veli-Matti :-) ?)

So, Bill, how does 1030 sound in Chicago tonight? (I know I've
gotten a nice clean signal at night in Fort Wayne IN many times!)

Scott Fybush -- fybush@world.std.com -- Toady to my employers (if I
didn't say it, I know our Moderator would ;-) ;-) ;-) ;-) ;-) ;-)

[Moderator's Note: You're learning, Scott. :-). WGN in Chicago gets Arb
credit as far away as Green Bay Wisconsin which is some 200 + miles away! As
far as WBZ I have heard them just 50 mile east of= Cheyanne WYO (EVEN WITH
KTWO ON THE AIR.) Guess they have a mother****** of a directional array!.
Bill)

## 528. AM transmitter modulation question.

Newsgroup: rec.radio.broadcasting
Date: 1993-04-20 07:15:18 UTC
From: U1066579@csdvax.csd.unsw.EDU.AU
Message-ID: <1993Apr20.071518.1626@gagme.chi.il.us>
Source record: 43419

Hi,
I have a question about AM broadcast transmitters. I have read that
broadcast transmtters modulate the final RF power amplifier. Wouldn't
it be a lot easier to modulate a low power stage and then follow it with
a big RF amplifier? Are there major problems with this?

Best Wishes,
Henry.

## 529. Boston RadioWaves

Newsgroup: rec.radio.broadcasting
Date: 1993-04-20 07:15:44 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993Apr20.071544.1658@gagme.chi.il.us>
Source record: 43416

For the last week Boston radio has been a scene of alot of sale
rumors.

* On Tuesday,April 13, a report in a sports section of the Boston Herald
indicated that the Boston Celtics put SportsRadio WEEI(590AM)
on the block and an unidentified religious group is apparently a strong
candidate to take over the financially strapped 5KW station.

The latest Arbitrends(full Arbitron ratings for January-February-March will
come out next week)show that WEEI's days as SportsRadio are numbered.
In a 12+ group,it slipped down from 14th to 18th from the last rating period.
EEI's current GM Aaron Daniels(former WABC boss) stressed that nationally
all sports-radio stations is not faring very well and the future for
the 24-hr all sports format is not very bright.

* On Friday,April 16th, an article in the Herald's TV/Radio section
mentioned an item that appeared in Radio&Records regarding a possible
sale of the WZOU-94.5FM(a distant #2 in the CHR race) to Atlantic Radio.
Atlantic people are strongly denying the report and think that
management from Pyramid's CHR leader WXKS-107.9FM started the rumor to
bust rival WZOU's chops a little bit. It's no secret that Atlantic is
searching for a second FM station(it currently owns AC WBMX-98.5FM "Mix"
and a pair of AM stations - "The Talk Station 680" WRKO-AM and "The Information
Station"WHDH-850AM). Atlantic's planned mega-merger with Pyramid fell
apart on March 5th because of Pyramid's inability to sell WNUA-FM in
Chicago to raise necessary cash to complete the deal. WNUA's asking
price is $30-$40 million.

* There's still a lot of talk(me and Scott refuse to believe it) that
by mid-May Boston airwaves will have a second country sound on its hands.
Greater Media is due to take over a smooth jazz station WCDJ-96.9FM(the
sale was approved by the FCC on April 1st). Greater Media also owns
AC leader WMJX-106.7("MAGIC 106.7") in the Boston market.
Boston currently already has one 24-hr country station - WCLB-105.7FM
("Hot Young Country") which beagn with its format after dropping the call
letters 'WVBF' and the AC sound on February 12th of this year.

-Mark

## 530. WKDD 96.5 Akron, OH changes from top40 to semi-AC

Newsgroup: rec.radio.broadcasting
Date: 1993-04-20 07:15:57 UTC
From: aj008@cleveland.Freenet.Edu
Message-ID: <1993Apr20.071557.1676@gagme.chi.il.us>
Source record: 43418

After the format change at WQMQ 94.9, 96.5 WKDD decides to change
also.

After the WQMX change from an AC MIX format(uhg) to a Hot Country
format(uhg), WKDD formerly a Top 40 outlet ,changed to "the best
of the 80`s and 90`s"(read:AC).

Now, no Top 40 stations are servicing the Cleveland area.

The two closest Top 40`s are Hot 101(WHOT 101.1) in Youngstown, and
B 94(WBZZ 93.7) in Pittsburgh.

I am not sure if WNCI 97.9 or Power 105.7 in Colombus are still to
p 40 or not. Columbus

Another era in Cleveland broadcast history fades away.

Any this is supposed to be the rock and roll capital of the world.

## 531. Changes at Z-100 (WHTZ) New York

Newsgroup: rec.radio.broadcasting
Date: 1993-04-20 07:16:19 UTC
From: slutsky@tesla.njit.edu
Message-ID: <1993Apr20.071619.1701@gagme.chi.il.us>
Source record: 43417

Malrite Communications announced that it will fold its radio stations into the Disney owned Shamrock broadcasting. This causes speculation about New York's Z-100 (WHTZ) which will celebrate its 10th anniversary in August. Z-100 has certainly fallen off its loft pearch. Duncan's Radio Market Guide reports the station took in $10.2 Million last year, compared with $20.2 Million only 2 years ago. Its rating of 4.0 in last fall's book represents a loss of 300,000 listeners a month.

Could this mean the end of the contemporary hit format for Z-100? Will the morning Zoo go by the wayside? We shall see what we shall see.

Bruce Slutsky

## 533. FCC Monitoring

Newsgroup: rec.radio.broadcasting
Date: 1993-04-20 07:27:49 UTC
From: john@zygot.ati.com
Message-ID: <1993Apr20.072749.1918@gagme.chi.il.us>
Source record: 43423

Apparently the FCC has begun a new tactic: unwarranted issuance of monitoring violations.

Recently we were served a notice of violation accusing us of "recurrent peaks reaching 120%", which supposedly occured on a March afternoon. We have two subcarriers that allow us to modulate at 110% legally. We watch this like a hawk and have the added bonus of competitors who also watch us very carefully. At all times we have been modulating within legal limits--before, during, and after the period mentioned in the citation. And my collegues at the other stations agree.

Since it seemed a bit awkward to give the normal answer (how the situation has been corrected and how its recurrance will be prevented), we called the acting Engineer in Charge. He claimed there was no mistake: if it says overmodulation, then there was overmodulation. Given that the FCC's monitoring truck is pretty much of a joke, it does not surprise me that something like this happened. There was probably some multipath and the green fresh-from-college trainee did not have a clue.

The question is, how do you tell the FCC it is full of excrement? Or is the point of all of this to increase revenue from stations even though they may be squeaky clean. We answered by saying that we would keep a closer eye on it, but we were honestly unaware of any problem.

>is heard on Monday morning)

The obnoxious Greaseman is on KLOS 95.5 in Los Angeles from 6 to 10pm;
where else is he on from 3-7p in Los Angeles?

By the way, I still listen to KLOS, but tune elsewhere from 6-10pm.
Mark and Brian have grown on me, and they frequently have interesting
guests, and they are not syndicated.

The Greaseman irritates me and leaves me cold.

Dana

## 535. Cleveland Indians radio station?

Newsgroup: rec.radio.broadcasting
Date: 1993-04-20 07:28:22 UTC
From: Steven J Sobol <sjsobol@tiny.com>
Message-ID: <1993Apr20.072822.1957@gagme.chi.il.us>
Source record: 43422

Hi:

Someone posting to cle.sports from Schaumburg was asking about Indians on the radio there. They used to be carried on a clear-channel Cleveland AM but aren't anymore (at least I don't think WKNR is clear-channel... there is only one I know of in Cleveland). Do you know of stations in Illinois or perhaps Indiana that might carry the Indians?

Thanks,
S.

## 536. Music Libraries on CD

Newsgroup: rec.radio.broadcasting
Date: 1993-04-20 07:28:25 UTC
From: 100020.1013@CompuServe.COM
Message-ID: <1993Apr20.072825.1962@gagme.chi.il.us>
Source record: 43424

I am still looking for sources of music libraries on CD; I am especially interested in AC/Adult Contemporary libraries, new or even "second hand" if someone wants to get rid of some material.

Further: I got the name of "BONEVILLE MEDIA COMMUNICATION" as a possible source, does anyone have their address/phone/fax handy?

Pse answer directly, I have no access to this list for reading. Thank You.

Pardon the ignorance, but is this "Pirate Radio" in question the
show that is apparently syndicated nationally (which I hear on, I believe,
Saturday nights in Baltimore on 98Rock (97.9 WIYY))? Or is it just a
show with the same name which is local to LA?

## 538. KQLZ / Pirate Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-04-20 08:01:45 UTC
From: "Chip (C.D.) Kelley" <chipk@bnr.ca>
Message-ID: <1993Apr20.080145.2847@gagme.chi.il.us>
Source record: 43425

> Actually, KQLZ went through three distinct stages:
>
> First, as you were referring to above, the first stage was with N.Y.
> DJ/PD, Scott Shannon. This period lasted from March 17, 1989 to
> February 14, 1991. This format was the new "rock 40" format. Actually,
> "Pirate Radio" during this time did quite well. Their Arbitron ratings
> were in the top five for awhile. I think LA listeners were growing
> sick of KIIS FM and "Power 106" (KPWR) and wanted something new
> and innovative, and this station was it.
> The main problem with the first "Pirate Radio" was that their playlist
> was incredibly limited since there were not many songs available that
> fit into their format. At any time, I could have probably named off
> three-quarters of their playlists. Over and over and over...
>

The limited playlist is still a problem. KEGL-97.1 Fort Worth-Dallas "the Eagle 97.1, Today's Rock & Roll" (who was rock 40 long before KQLZ even thought of it) has this problem. They have over the last couple of months gone to adding a lot more older rock (Pink Floyd, Led Zeppelin) in the mix.

> Finally, KQLZ died on April 3, 1993 as Westwood One finally got rid
> of their money-losing station.
>

My understanding was that KQLZ WAS making money, just not enough to cover all of WW1's money problems. I read that in an article, but I don't remember where (BROADCASTING, BILLBOARD?).

Rock 40 does seem to be making a small comeback: KEGL; KKYK-103.7 Little Rock "the Hot New Kick 103.7 - Rockin' the (Little) Rock with Today's Rock and Only the Killer Classics"; KTUX-98.9 Shreveport LA "Tux 99 Rocks - Louisiana/Texas' Best Hit Rock & Roll"; KMYZ-FM-104.5 Tulsa "Z104.5"; KISM-92.9 Bellingham WA; WNFI-99.9 Daytona Beach. Then, there are those top 40s which are pretty close: KISR-93.7 Ft Smith AR "Kisser 93.7"; WQUT-101.5 Johnson City TN; KNIN-92.9/990 Wichita Falls TX-Lawton OK "Power 92-9 KNIN." I hear WAAL-99.1 Binghamton NY seems to moving in that direction and that dance-lovin' WYHY-107.5 Nashville "Y107" has added quite a bit of rock.

Of the rock 40s listed above, KMYZ-FM and KEGL have top 40 rivals. KMYZ-FM never could beat the once-mighty KAYI-106.9 "K107." Ever switching to rock 40 a couple of years ago, KMYZ has been beating KAYI by a fairly wide margin. KAYI is now something of a hot AC/ adult top 40 (and appears to be phasing out their longtime "K107" handle). KEGL has their first rival in a while - so it's too early

to tell. The first book, KEGL won. Previously, KEGL has rocked
its rivals into another format (KAFM-92.5/KZPS-92.5 to classic rock,
KTKS-106.1 to new age/jazz, KHYI-94.9 to oldies and now country).

## 539. FM-band Subcarrier Progamming

Newsgroup: rec.radio.broadcasting
Date: 1993-04-20 08:02:17 UTC
From: Robert Carpenter <rc@cmr.ncsl.nist.gov>
Message-ID: <1993Apr20.080217.2870@gagme.chi.il.us>
Source record: 43427

One day last week I thought I heard a spot on WPGC-AM promoting the sale of SuperRadios with an attachment which would allow one to hear WPGC-AM business programming at night through a subcarrier on an FM station.
(Background: WPGC-AM is 50 kW 1580 kHz days-only - ok, 270 watts at night - they have been using an LMA so that 1150 Gaithersburg carries them at night - but that doesn't cover well either.)
This got me interested, so I lashed together my wide-coverage ham radio to tune the subcarrier frequency range and coupled it to an old Scott FM tuner by wrapping a wire around an appropriate tube. I only find program material on the 91/92 kHz subcarriers. Others likely have some digital sigs.
With just a hunk of wire for an antenna I hear:
FM stn--v 92 kHz Subcarrier Content
WAMU - EZ listening with (maybe Arabic?) vocals
WBJC - Eastern/Oriental music Sunday; same as WAMU Monday am
WPGC - Oriental (religious?) talk, lite music w/ vocals
WWDC - EZ listening rock with English vocals
WXTR - South American music with Spanish vocals
WFSI - French, some with Haitian(?) accent, a lot of talk about Haiti, local DC weather, sounds a lot like a typical Caribbean French-language radio station
Is this typical of programming one finds on subcarriers in big cities? I'm not up-to-date on the rules, but why don't AM-FM combos - where the AM has poor coverage - put the AM on the FM subcarrier? WWDC's 5 kW 1260 kHz installation has never covered well, even back before 1950 when it was put on as WOL, so why don't they use their (or some-one's) FM subcarrier to get better coverage for the AM programming? Yes, there is chicken/egg problem regarding receivers.

Any answers? Bob, <w3otc@amsat.org>

[Moderator's Note: In Chicago we have a reading service for the blind, Physician's Radio Network, 2 'Muzak' style channels, 1 Greek station, and a bunch of digital stuff. With the advent of DMX (Digital Music Xpress), a 30 channel all-cd cable music service, the demand for the 'Muzak' had dwindled. Why have a single low-fi (WORSE than AM) signal when you can select 30 channels of near cd quality stereo audio? Bill]

Henry. Email u1066579@csdvax.csd.unsw.edu.au wonders:

> I have a question about AM broadcast transmitters. I have read that
> broadcast transmtters modulate the final RF power amplifier. Wouldn't
> it be a lot easier to modulate a low power stage and then follow it with
> a big RF amplifier? Are there major problems with this?

The answer is that linear amplifiers, needed to avoid distortion, are
generally much less efficient than the Class C final amplifier used when you
modulate the final. Distortion is a Bad Thing since is causes interference
to stations on nearby frequencies as well as making the station sound bad.

It IS possible to build quite-efficient linear amplifiers; the 50 kW
Western Electric transmitters of the late 1930s used them, as well as post-
WWII big rigs made by Continental Electronics. They were a bit complicated,
and possibly hard to adjust. With advances in modulator design (PWM),
modulation of final amplifiers is getting even simpler and yet more
efficient.
The big modulation transformer is going (has gone?) away and is replaced by a
much-smaller filter inductor.

[Lists some fascinating SCA signals and asks...]

>Is this typical of programming one finds on subcarriers in big cities?

Actually, I think it is far more than one is likely to find in all but a few places. Here in St. Louis, an SCA adapter is a waste -- there are a couple Muzak channels, and farm reports at certain times of the day only, and a radio service for the blind that seems to always be reading the most uninteresting possible parts of various local papers.

When I first got interested in SCA, there was a Physicians' Radio Service channel, but that vanished some years back. (Are they still operating using some other, non-SCA medium?)

I hear that some radio services for the blind in other localities have features like reading pornography (as a civil-rights issue, they believe that the blind should not be denied access to the same wide range of material that sighted people have); I've never heard anything approaching that on the local service. (Of course, it might make a difference that the local service is housed at the Catholic shrine of Our Lady of the Snows just across the river in Illinois here... :-)

But there are NO ethnic programs on SCA here like there are in many other cities. There is a large Vietnamese community here, so I have no idea why the same sort of service for them, and other ethnic groups, doesn't get operated here the way it is in other cities. As far as I can see, most of the SCA capability here, even channels which previously had been used, is going to waste. There's not even much data signals...

[Moderator's Note: There are just so many more efficient and higher quality methods of delivering subscription-based audio these days. SCA is very low quality (worse than the worst AM signal) and SCA can degrade the main channel audio on some (less expensive) stereo receivers. Still, I'd like to hear an aircheck of the blind service reading pornography :-) Bill]

[Question about low power broadcasting rules deleted]

>[Moderator's Note: Does anyone want to answer this one in a form that would
>be suitable for a rrb FAQ file? It gets asked all the time and is a natural
>for a FAQ. Bill]

Good question. I myself have been trying encourage individuals to come up with such a document (I'm a little too busy to keep taking on more and more projects solely by myself). My first attempt was with Dave Norment (ka3pgn@ka3ovk.uucp) who seems to have left the net. Dr. Barry Ornitz (ornitz@kodak.com) expressed interest, but I haven't heard from him since November.

There *DOES* exist a Ramsey FM-10 FAQ, posted to alt.radio.pirate (I can't seem to find it in any of the usual radio archives), which combines technical information about the FM-10 with a bit of general Part-15 information. I wrote to the author suggesting that he try to post it to rec.radio.broadcasting and/or rec.radio.info, but haven't gotten a reply.

If anyone is interested in writing such a document, I can provide some guidance as to maintenance, posting, and archiving. Drop me a line.

[Moderator's Note: Re: Archiving; The Internet Radio Journal (the email version if rrb) is archived at deja-vu.aiss.uiuc.edu, through the courtesy of C. ## 552. low power transmission

Newsgroup: rec.radio.broadcasting
Date: 1993-04-21 22:53:18 UTC
From: s5300013@nickel.laurentian.ca
Message-ID: <1993Apr21.225318.7056@gagme.chi.il.us>
Source record: 43440

This is a follow-up to a recent request over FCC rules on low power transmission but with some slightly different conditions. On our university campus there is an alternative radio station that is currently operating over cable-FM through a local cable company. We are a Canadian university so that the FCC does not apply but CRTC ruling does. Does anyone know of the CRTC regulations on low power broadcasting. From what I was able to gather under 200W (?) is "ignored". At the very least it is tolerated if the production is not pissing off the intended audience or neighbors. Laurentian is somewhat isolated from the city and the residences on campus are not equipped for cable reception. So the idea would be to transmit a low power signal to cover the campus.

Some specific questions about this are:

1) What kind of power would the station have to transmit to cover a 1 mile radius?

2) How and where do we get the transmitter? Can our techie make it?

3) Since we are already transmitting over cable-FM, can that be utilized/ converted to over the air transmissions? Or do we have to put in new equipment to run a parallel signal?

4) Is this going to be expensive?

5) Is there someone (in Canada) who has done this kind of thing and could get in touch with me to fill me in on the particulars? (ie. is it worth it?)

Any help would be greatly appreciated. Answers can be posted or e-mail me directly at:

[Moderator's Note: Wow, 200 watts is 'ignored' in Canada? Sounds like a pirate's paradise :-). Bill]

# 553. New York and Long Island Radio Ratings

Newsgroup: rec.radio.broadcasting
Date: 1993-04-21 22:57:01 UTC
From: slutsky@tesla.njit.edu
Message-ID: <1993Apr21.225701.7222@gagme.chi.il.us>
Source record: 43444

The Arbitron Ratings for New York and Long Island are out with some interesting results. I am quoting from New York Newsday which does not report the rating comprehensively. They should appear in Billboard and Broadcasting within a week or two.

New York City Total

WRKS 5.8
WLTW 5.3
WCBS-FM 4.8
WBLS 4.4
WOR 4.0
WINS 4.0

WQEW was at 1.4 which is significantly more than the 0.2 that WQXR-AM got in the Fall book.

The big surprise was that WBBR got a BIG FAT ZERO!!!! That means that its rating were too small to measure. I am not it the radio business, so I am guessing that it means that less than one person in 1000 listens to it. WCBS-AM and WINS have had extensive television and subway billboard campaigns over the last few months. I have only seen WBBR advertised on an all news Cable TV station.

New York Ratings 6 - 10 AM

Howard Stern WXRK 7.7
WINS 6.9
WCBS-AM 6.0
John Gambling WOR 5.7
WRKS 4.9

Long Island Ratings Total

WALK-FM 5.9
WOR 4.6
WXRK 4.3
WBAB 4.3
WBLI 4.3

Long Island Ratings 6 - 10 AM

Howard Stern WXRK 9.7
WALK 6.7
WCBS-AM 6.6
John Gambling WOR 6.0
Imus WFAN 4.8

In other New York radio news Pat Kelley will be replacing Richard Neer
on the morning show on WNEW (FM)

Bruce Williams can now be heard on WEVD.

> channel all-cd cable music service, the demand for 'Muzak' has dwindled.
> Why have a single low-fi (WORSE than AM) signal when you can select 30
> channels of near cd quality stereo audio? Bill]

Of course, it's illegal to listen any of it (just like it's illegal to
listen to cellular phone conversations) unless you're authorized.

[Moderator's Note: Uh, no Jerry, it's not illegal to listen to SCA. It is
considered theft of service to USE the programming commercially without
paying the fees. Cellular phones are a special case. SCA falls into the
same sort of jurisdiction as police scanning. You can listen but don't
divulge any details of what you hear. Bill]

## 555. Reporters/editors needed for Pirate Connection

Newsgroup: rec.radio.broadcasting
Date: 1993-04-21 22:58:46 UTC

As most of you know, I run the Pirate Connection Free Radio magazine.
I would like to expand my magazine even more and I'm therefore
looking for more writers. What I mostly want are interviews or features
of different pirate operators and pirate stations. If you're interested,
please send me an e-mail or a letter to either Malmoe Short Wave Club,
P.O.Box 7521, 200 42 Malmoe, Sweden or to my personal address Stefan
Printz, Kamnarsvagen 13D:220, 226 46 Lund, Sweden.
Thanks for your attention.

## 556. Experiments in FM subcarrier

Newsgroup: rec.radio.broadcasting
Date: 1993-04-21 23:07:09 UTC
From: Sid <ssowder@silver.ucs.indiana.edu>
Message-ID: <1993Apr21.230709.7597@gagme.chi.il.us>
Source record: 43443

Jim Berkey <altradio@indiana.edu>
via Alternative Radio Club, Indiana University, BloomINgton, Indiana

RE: Robert Carpenter, April 20 article

I read about your exploration of the FM subcarriers with great interest, particularly the method by which you were able to demodulate them. I assume that the wide-coverage receiver was only capable of AM detection on that very low frequency? Since FM broadcast band subcarriers are "FM within FM", I'd guess that you were detecting these signals using Slope Detection (wherein one obtains an approximate conversion of FM-to-AM, by tuning off to one side of the desired FM signal with an AM receiver).
Congratulations, I nominate you for the Hitchhiker's Guide to the Galaxy's Extreme Cleverness Prize. I would not have thought of it had you asked me.

I wonder why you could not find the traditional 67 KHz subcarriers? Could it be that the Slope Detection method does not work well, if a receiver does not have a sharp selectivity slope, when trying to pick out 67 KHz from between 92 KHz and the 38 KHz stereo sub-sidebands? (The latter is "AM-suppressed-carrier within FM". Try using your beat frequency oscillator to receive it. The audio will be Left-minus-Right, with very faint voices. L-R is what mostly comes out of the rear channels of home theatre.)

As for why subcarrier is not more widely used, it is apparently a mixture of technical and regulatory problems.
It has been some time since I read the subcarrier regulations, but at that time, subcarrier was intended as a private subscription audio service. Hopefully, WPGC has expanded the definition of "private subscribers" to include anyone who buys a SuperRadio. Or maybe that problem just went away during the deregulatory period.
The technical quality is more of a barrier. Background crosstalk from the main channel is noticeable during program silences, so subcarrier systems are often designed to turn the subcarrier modulator or receiver off upon program silence. It seems obvious to me that Dolby or DBX noise reduction would make a great improvement in subcarrier reception.
There is also an economic barrier. A radio station can often make more money by selling two all-talk monoral channels, than one low-fi music stereo pair (67 & 92 Khz either way).
For minority audiences (including college students!) subcarrier can make sense in much the same way cable-FM-only stations (they are in the FM band carried on the TV-cable system). That's probably why you encountered so many ethnic programs.
Talk about obscure: You might check the cable-FM-only stations, if you have TV-cable, for THEIR subcarrier content, if any. Just use a cable signal

splitter and cable transformer (a few dollars at Radio Shack) to attach the cable to your Scott tuner's two 300 ohm screws. Of course, if they had only one subcarrier, it would probably be 67 KHz.
Hmm... now what could one use cable-FM-only subcarrier for...?

## 557. Chicago winter Arbitron ratings

Newsgroup: rec.radio.broadcasting
Date: 1993-04-22 04:32:50 UTC
From: rrb@airwaves.chi.il.us
Message-ID: <1993Apr22.043250.11176@gagme.chi.il.us>
Source record: 43445
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Well folks the Chicago Arbitron Ratings have come out for the winter rating period. Here they are. Everything contained herein is based upon information contained in the April 21st Robert Feder's Column in the Chicago Sun-Times and is reprinted as a public service.

Interesting trends:

WGN, Chicago's legendary full service AM, once an unbeatable giant, has fallen substantially in the past two ratings periods. Despite this unprecedented tumble, they still hold a commanding lead in AM drive.

Howard Stern continues to underperform in Chicago, despite being on AM-1000 WLUP, a 50,000 watt station already well known for their comedy/talk/personality format. He is at 17th place in the mornings.

Jonathon Brandmeier, who jumped out of a commanding position as Chicago's most well known Morning man (on WLUP AM/FM) to do PM drive, continues to slip down in the ratings, While Steve Dahl/Garry Meier, who used to be in the PM drive on AM and are now in AM drive on FM, continue to make a strong showing. Despite these powerhouses, the overall showing for AM-1000 has dropped.

Urban Contemp WGCI FM is now the #1 overall rated station in the market.

Here are the ratings...

No. CALLS FORMAT Winter Fall Comments

1 WGCI-FM Urban 7.4 7.6
2 WGN-AM Full Svc. 6.5 8.5 Cubs - Bears
3 WUSN-FM Country 6.2 5.7 #1 ages 25-54
4 WBBM-FM CHR 5.0 4.6 Chicgo's only CHR
5 WLIT-FM Light AC 4.6 3.7
6 WBBM-AM CBS News 4.2 3.9
7 WJJD-AM Standards 3.5 3.0 Sinatra through Beatles
8 WNUA-FM Smooth Jazz 3.4 3.5
9 WWBZ-FM Hard AOR 3.3 3.4
10 WVAZ-FM Light Urban 3.2 2.8
11 WLS-AM Phone-in Talk 2.9 2.3 Limbaugh Simul. with FM
12 WKQX-FM Modern Rock 2.8 2.9 Recent switch from AC
13 WLUP-AM Hip-Rock-Talk 2.7 3.0 Stern - Blackhawk Hockey
13 tie WMAQ-AM Group W news 2.7 2.5 White Sox - Bulls
15 WLUP-FM AOR 2.6 3.0 Steve & Garry mornings
15 tie WPNT-FM Hot AC 2.6 2.0
17 WCKG-FM Classic Rock 2.4 2.2

18 WXRT-FM Altern. AOR 2.3 2.9
19 WJMK-FM Oldies 2.2 3.1 Home of many 60's AM jocks
20 WSCR-AM Sports (days) 2.0 1.6
21 WNIB-FM Classical 1.9 1.3 Blues overnites weekdays
22 WIND-AM Spanish 1.8 1.1
23 WOJO-FM Spanish 1.7 1.7
23 tie WTMX-FM Mix, AC? 1.7 1.5 Mix of 60's - 80's

## 558. Boston RadioWaves(4-22-93)

Newsgroup: rec.radio.broadcasting
Date: 1993-04-22 23:47:13 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993Apr22.234713.26362@gagme.chi.il.us>
Source record: 43446

The winter(January thru March) ratings for the Boston market came out
yesterday with some big and not-so big surprises...

* The big shock was the news that WCLB-105.7FM(formerly WVBF) which began
with a country format on February 12th moved from 14th to 12th in a 12+ group
and
did even better among 25-54 by jumping from 13th in the fall to 10th
in the current book. The ratings for 'CLB jumped up across the board
in every part of the day. 'CLB people are in the midst of a very agressive
of promotional campaign(TV,newspaper ads,billboards,etc) and it seems to
be paying off in a big way.

* The news that Howard Stern is now in charge of Boston's nighttime air
didn't surprise me at all. I believe I even predicted in this group a couple
of months ago that he'll shatter his nighttime FM competition(what competition?:-)
into tiny pieces. Here are WBCN's impressive nighttime numbers with
Howard only on the air for about 4 weeks of this past rating period :

7pm-12midnite block :

- WBCN went from 10th in the fall rating books to 3rd in the winter among
a highly desirable demographic, adults 25-54.(3.9 to 5.8)

- WBCN has moved into #1 slot among all 18-34 adults(6.2 to 10.8 jump)

- WBCN has jumped from fourth to first among all men 25 to 54.

- In all 12+ group Howard has improved 'BCNs nighttime numbers from
3.6 in the fall to 6.1(4th place).

The reason why I'm not a bit overwhelmed by these numbers is because
I want to see how Stern's show does in the summer months when 250,000 college
leave
Boston and the real core radio listeners remain in the city. I don't
think the latest numbers are fluke but they're a little over-inflated.
Plus,you have to figure in all the media attention Stern received when he
first landed at WBCN on March 3rd. Any attention is good as far as Howie
is concerned these days...

The spring book(April-May-June) will be even better for WBCN. I bet you
Infinity's is getting itchy about moving Stern into 'BCNs morning slot
by September,just as massive return of all the college students gets
underway...That'll be the real test...
So far,Stern proved to me 1 thing about Boston's FM nighttime radio :
a strong rock audience at night was always a huge myth.

I hope radio columnists in this town would shut up already about not having enough Led Zepplin at night. Thanks,Howard.

I'll post Boston top10s for the winter period in my next article tomorrow.

* Tomorrow,April 23rd,another FM merger takes place as Granum Communications officially takes over soft AC WSSH-99.5FM("Your easy favorites of yesterday and today.
WISH 99.5"). Granum also owns a soft album rock station WBOS-92.9FM which in the last year has become a major player in the Boston radio war.

This makes it a second FM merger in Boston after the FCC relaxed the ownership laws last year:

- WBCN-FM and WZLX-FM merged on February 1st,1993. Both owned by Infinity's Hemisphire Broadcasting.

- WBOS-FM and WSSH-FM will merge on April 23,1993. Both owned by Granum Communications.

- WMJX-FM and WCDJ-FM will merge sometime in May. Both will be owned by Greater Media.

-Mark

## 559. Arnaldo Coro Radio Havana/Texas Conference ect.

Newsgroup: rec.radio.broadcasting
Date: 1993-04-22 23:47:52 UTC
From: aa367@freenet.carleton.ca
Message-ID: <1993Apr22.234752.26391@gagme.chi.il.us>
Source record: 43447

I have been getting calls from US broadcasters so I know that many
broadcasters in the US are very interested in meeting Arni Coro when he gets
to the states.

He hopefully will arrive early next month. His visa has been
issued and he has the magic stamp in his passport.
All the seats appear to be booked at the moment and it is
looking like next month before a seat will be available.

For other readers, Arnaldo Coro is an announcer at Radio Havana
and domestic station Radio Progresso. He is perhaps the best
known English announcer in Cuba today.

Regards
Roger Townsend

## 560. Station Format Designations?

Newsgroup: rec.radio.broadcasting
Date: 1993-04-22 23:48:00 UTC
From: sjones@ccs.carleton.ca
Message-ID: <1993Apr22.234800.26421@gagme.chi.il.us>
Source record: 43448

This infor is probably in a FAQ, but these don't last long here and I don't know how (or where) to search an archive. Is there a standard definition for the different formats, such as the ones Bill used in the Chicago ratings report?

[Moderator's Note: Most of the formats are self explanitory. Some were my own impressions because no real definition fits (IMHO). Here are a few as I understand them If others have better definitions (as I am sure some do) please add yours to the pile.

CHR - Contemporary Hit Radio Current dance, rap and pop hits.
AC - Adult Contemporary; Like CHR but usually without the rap and generally playing a wider variety of selections. AC is a
fairly broad catagory and has many variations.
Urban Contemporary ; Usually means a large concentration of Black and Latino artists, and like AC can have a lot of
variations on the theme.
Dusties; Black artists - Oldies - Motown - etc.

Full Service; Mostly personality talk with some music, generally with a heavy news-information (and often sports)
commitment. Full service stations geneally do
well in most markets, if they are programmed right.

There are a lot more, and they WOULD be a good addition to a FAQ. Anyone wanna write the list? Bill]

# 561. KGAY IS BACK

Newsgroup: rec.radio.broadcasting
Date: 1993-04-22 23:48:35 UTC
From: gst@gagme.chi.il.us
Message-ID: <1993Apr22.234835.26458@gagme.chi.il.us>
Source record: 43449

Here is something from REC.VIDEO.SATELLITE I thought would be useful here

>From: Jason Lin <71043.1570@COMPUSERVE.COM>

KGAY is baaaaaaaccccccccckkkkkkkkkkk!

The Denver-based alternative-music radio station which happens to have some gay-oriented information/news program came back today on Galaxy 3, Transponder 22, at 8.2. Note the transponder number is different than what was previously announced when it went off the air exactly two weeks ago.

Program director Vicky D. was in Los Angeles this past weekend meeting with record company executives trying to get on-air interviews with artists and celebrities, in addition to get the best music library possible for a satellite radio station.

The station is also about to kick off advertising campaign on major satellite magazines and other media. And also coming soon... a special promotional KGAY alternative music CD compilation just for its listners.

I do not know the new phone number yet but please listen for details.

Tell the DJ that Jason from InterNet sent you!

## 562. NCAA Lacrosse Championships Radio Program

Newsgroup: rec.radio.broadcasting
Date: 1993-04-22 23:52:23 UTC
From: WEOS-FM <BLACK%HWS1%HWS.bitnet@CUNYVM.CUNY.EDU>
Message-ID: <1993Apr22.235223.26578@gagme.chi.il.us>
Source record: 43300

WEOS has been granted the radio rights to the Men's NCAA Lacrosse Championship Memorial Day Weekend from College Park Maryland, and will be offering this program nationwide as the NCAA Lacrosse Network. The four games include the DI semi finals, the DIII Final and the DI final. The broadcasts are avialble to all stations, and with the exception of the "home school" station, this is the only place to hear the broadcasts. If you would like to have this event for your station, or if you would like to have it aired in your area, call or Email me for details. There is no cost for non-commercial stations. The game will be available via satellite or phone feed. Local underwriting/commercial opportunities exist as well.

In addition, this event will be available via Teamline, as are all Hobart & William Smith sports broadcasts. Again, you can call or Email me for information.

Source record: 43303

u95_dgold@vaxc.stevens-tech.edu (dave) writes:

> Does anyone know the FCC guidelines for setting up a low power AM transmitter
> We are now using carrier current but would like to switch to a very low
> power on-the-air am transmitter.

On AM broadcast frequencies, the limits for unlicensed transmitters are:
The power input to the final RF amplifier cannot exceed 100 miiliWatts
(that 0.1 Watt). The length of the antenna (including the feedline
going from the transmitter to the antenna) cannot exceed 3 meters.

[Dave, you are probably better off with carrier current!]

On the FM band, the limit is expressed in terms of field strength:
250 microVots per meter, measured 3 meters away from the transmit
antenna.

I will soon be self-publishing a book on this topic, called the
Alternative Radio Handbook.

[Moderator's Note: ... and we would all love to hear about it when it comes
out. I'd love to see a copy too. Let the group know when it is available.
Bill]

> divulge any details of what you hear. Bill]

Are you sure? My impression (IANAL) is that the latest Electronic
Communications and Privacy Act forbids listening to SCA broadcasts unless one

actually subscribes to the service, but I do not have a copy of the act in
front of me. Perhaps I am mistaken, but I note that no
manufacturer offers a consumer unit for receiving SCA procasts and even
Bruce Elving is no longer mentioning SCA receivers and decoders in his
mailings.

[Moderator's Note: No, I am not ABSOLUTELY sure, but my impressions of the
Privacy act was that it only effected Cellular phones, and I believe
scrambled cable channels. I have heard nothing about sca. I am sure one of
our brilliant readers will know though. What does IANAL mean? Bill]

## 566. Radio AAHS (OZ) brings imagination back to radio.

Newsgroup: rec.radio.broadcasting
Date: 1993-04-23 03:38:11 UTC
From: rrb@airwaves.chi.il.us
Message-ID: <1993Apr23.033811.28808@gagme.chi.il.us>
Source record: 43304
Cross-posted to: rec.radio.broadcasting,rec.radio.info

One of the highlights of my recent trip to Minneapolis (indeed one of the main reasons for going) was the opportunity to listen to and record what has to be the most unique, fresh and innovative radio format I have come across in years.

Starting a couple of years ago on a single 5000 watt radio station in Minneapolis, this new format has grown to satellite network status and now has affiliates in Washington D.C., Phoenix Ariz and two outlets in the L.A. area, with more on the way.

The station is calls Radio AAHS (pronounced 'OZ", as in the Wizard) and bills it's self as 'kid's radio', but it is much more than that. When we hear the phrase 'kid's radio' we might envision an audio version of sesame street, or a stilted and condescending 'grownups preaching to kids' sort of thing. But nothing could be further from the truth where radio AAHS is concerned. At first listen, you might think you are tuned to "Doctor Demento", since AAHS plays a lot of novelty, and animated songs. But as you listen you begin to realize that this is much more than novelty music.

The sound is bright, clever, very positive and stresses both fun and responsibility in a very non-preachy and stimulating way. The music is king. Sure you have your staples of Kermit the Frog, Raffie, and such, but it goes way beyond that. The music literally defies categorization, borrowing styles as far flung as rap, folk, country, techno-dance, reggae, blues, rock&roll, dixieland, and even classical, Radio AAHS is a potpourri of very interesting, and truly fresh stuff.

All of the music, regardless of style, carries with it the positive messages of self esteem, imagination, getting along with others, daring to be different and preserving the environment. To try and describe this mix would be virtually impossible, because it is so diverse. Some artists are well known in the pop/rock world (such as Paula Abdul doing Zippity Do Da, Little Richard doing a rocked out version of Twinkle Twinkle Little Star, Michael Jackson with Black or White and Heal the world, and many many others), but a larger percentage of the selections are from artists and groups that are not as well known on the pop/rock stations but none-the less create a marvelous sound that is sure to please kids from 5 to 75. Some of these artists are Tom Chain, Tom Paxton, Parachute Express, The Teddy Bear Band, Reggae For Kids, and a host of others too numerous to mention.

In addition to music, Radio AAHS has regular features such as Storytimes where an interesting story is read over the air, sometimes accompanied by sound effects and such, the 'Brain Game' where a question is asked and callers try to guess the answer and win prizes, The good deed day where listeners nominate someone for a good deed, and if they win, they get prizes, and a lot of impromptu little stories and even jokes told by listeners. The DJ's are all different and they get involved with the music and the kids who listen. On the weekend is the 'Top 1o Countdown' where requests are tabulated and the top ten most requested songs are played.

Radio AAHS is not merely kid's radio. It is family radio in it's purest and best form. It is a station that Mom and Dad can listen to as easily as their kids and because it is not preachy, but instead fun, entertaining and subtly educational, kids do not grow tired of it. On weekday mornings, kids actually come in to read the newscasts!

Currently CD Broadcasting, parent company of radio AAHS, is expanding and seeking affiliates. Everywhere that the signal is heard it is widely accepted and becomes an instant success. In Minneapolis, the station came in at number 4 in one rating sweep. Big name advertisers like Blockbuster video have produced commercials specifically for Radio AAHS. Even with a very restrictive commercial policy (No ads that are likely to be misunderstood by kids, no ads that appear too manipulative etc) they have a full commercial load and have advertisers waiting in line. For a niche format, Radio AAHS is a blockbuster in it's own right. Mainly because it is filling a void that is not being filled by mainstream broadcasters and they are doing it in a manner that is honest, fun and stimulating to the mind, heart and imagination.

In my humble opinion, this station is the freshest, most innovative, fun and exciting format to be even moderately accepted in commercial radio in recent times. I listen to it regularly through the tapes and have even considered getting a dish for that purpose. However I have been told that CD broadcasting is planning on buying a station in Chicago soon, although nobody there will tell me which one or when.

WWTC, the flagship station in Minneapolis, is also a great sounding station. With my Sony SRF A100 stereo AM/FM receiver on wideband, and with a super strong signal (less than 10 miles from their 4 tower array), the tapes I made sound superb, almost as good as FM, although not stereo and there is a faint 10khz whistle at night due to a 1270 station in Rochester, some 80 miles to the south.

So if you have kids, or if you are (like me) a kid at heart, you will probably love Radio AAHS. In this era of bland, dead-end, un interesting repetitions of the same crap, Radio AAHS is a shining star indeed. I don't know which bird it's on, but it is discreet stereo (not SCPC or digital) so it should be easy to get on most, if not all, TVRO systems.

Me, well Ill listen to my tapes until the station signs on here. Who would have ever thought that I, "Mr. I HATE SATELLITE FEEDS" would ever get so excited over a satellite network, let alone drive over 800 round trip miles to hear it But I guess anything can happen (In fact that is the name of a radio AAHS song). (OK send in the men in the white coats now :->)

My next article will be on the tour I took of Minnesota Public Radio's facility, hosted by Loren Omoto, who is a reader and contributor to this journal.

<>in the early to mid 1970s he was on WMCA and later on WPLJ in New York.
<
<Alex Bennett! My god! He probably still wears tie dyed t-shirts! What
<does Bennett do - a talk show?

Sort of. He's the 6-10 am weekday personality on KITS-FM ("Live-105",
105.3). The station is so-called "Modern Rock". He has odd guests,
often comedians, and plays some music but a lot less than the rest
of the DJs.

NATIONAL CAMPUS & COMMUNITY RADIO CONFERENCE
NCRC 93
Sudbury, Ontario, Canada
June 21 - 26

---

The National Campus and Community Radio Association invite you to attend the 13th National Community Radio Conference (NCRC 93). This years conference will be held on the campus of Laurentian University in Sudbury, Ontario from June 21-26.

The first day of the conference is Tuesday, June 22nd. Things will wrap up on Saturday afternoon, June 26.

LOCATION
---

Laurentian University in a bilingual (French & English) institution located in Sudbury, in northern Ontario. About a five hour drive north of Toronto, Sudbury is a wonderful location for NCRC93.

CFLR, the host station, is the first non-FM station to host an NCRC. This presents a unique opportunity to experience a station in transition to FM, and the conference will focus on many issues of station development.

TRANSPORTATION
---

Access by highway - TCH North from Toronto (5 hrs), west from Ottawa (4 hrs) and Montreal (6 hrs).

Access by air - served by both Air Canada and Canadian International Airlines (or regional connectors), just a short flight from Toronto or Ottawa (contact your travel agent)

Access by train - VIA RAIL service available on a regular schedule north from Toronto or west from Winnipeg and points west - contact VIA or AMTRAK for info.

ACCOMODATION
---

Accomodations are available in the University residences. Double rooms are $37.50, single rooms are 25.50 - all taxes included.

Alternate accomodations are available in various hotels. Contact the conference organizers for more info.

WOMEN IN COMMUNITY RADIO
---
The conference kicks off with the second annual WOMEN IN COMMUNITY RADIO Conference will be held on Monday, June 21st. This one day conference will provide an opportunity for all women who work in Community Radio to discuss the issues affecting womens participation in radio and the community.

Building on last year's successes, we hope that this day will afford enough time for an efficient discourse on the topics of affirmative action, employment equity, getting and keeping women involved in Community Radio, involvement in management, and the technology of radio.

For info on the women conference contact Maria O Connell or Claire Todd at the Conference Office.

REGISTRATION
---

Registration is $90 for NCRA members, $100 for non-members before May 15. After May 15 registration is $100 for members, $110 for non-members.

Reduced rates are available for groups / multiple station reps. 2nd, 3rd and 4th delegates only $75 ea, or $70 each for over 5th delegate.

Per day or session registration info available upon request.

All registations cover the womens conference.

NORTHERN ONTARIO IS BEAUTIFUL IN JUNE
---
Some of the CFLR staff and friends will be glad to play guide to a few delegates who wish to check out Northen Ontario for a few days after the conference. Less than an hour away is famour Killarney Park, made famous by the paintings of th~e group of seven. Canoing, hiking, rockclimbing and pristine scenery is available for you. For info contact the conference organizers.

INFORMATION
---

To register, or for more info, contact the conference organizers.

# 572. Re: Radio AHHS, Sports flagship stations & Greaseman

Newsgroup: rec.radio.broadcasting
Date: 1993-04-26 05:16:10 UTC
From: Robert Smathers <roberts@triton.unm.edu>
Message-ID: <1993Apr26.051610.18736@gagme.chi.il.us>
Source record: 43311

1) RADIO AAHS -- yes, I agree it is a super station. I listen to it off satellite (ASC-1/22 -- midwest sportschannel's signal -- around 8.00 MHz carrier. There are two there to form the stereo signal).

2) How is the Greaseman distributed? DATS/SEDATS or analog form (on satellite transmissions if satellites are used?)

3) Someone asked for the Major League Baseball radio nets. Being a diehard baseball fan, I have compiled a list. I'll mark the "50,000 watters" that I am sure (or pretty sure) of.

ENGLISH LANGUAGE RADIO BROADCASTS (flagship stations listed):

Baltimore Orioles WBAL 1090 50,000 watter
Boston Red Sox WRKO 680 50,000 watter
California Angels KMPC 710
Chicago White Sox WMAQ 670 50,000 watter
Cleveland Indians WKNR 1220
Detroit Tigers WJR 760 50,000 watter
Kansas City Royals WIBW 560
Milwaukee Brewers WTMJ 620
Minnesota Twins WCCO 830 50,000 watter
New York Yankees WABC 770 50,000 watter
Oakland A's KNEW 910
Seattle Mariners KIRO 710 50,000 watter
Texas Rangers WBAP 820 50,000 watter
Toronto Blue Jays CJCL 1430
Atlanta Braves WGST 640
Chicago Cubs WGN 720 50,000 watter
Cincinnati Reds WLW 700 50,000 watter
Colorado Rockies KOA 850 50,000 watter
Florida Marlins WQAM 560
Houston Astros KPRC 950
L.A. Dodgers KABC 790
Montreal Expos CIQC 600
N.Y. Mets WFAN 660 50,000 watter

Exchange network aims to inform European youth
++++++++++++++++++++++++++++++++++++++++

While the economic union of the European Economic Community (EEC) is facing an uncertain future, several new radio initiatives aimed at promoting information exchanges among its member states have been created.

One is InterKonneXiones, a program translation and exchange service initiated by Radio Dreyeckland in Germany (see InteRadio Vol. 4 No. 4). The other is a youth programming exchange network of five associative stations, in France, Spain, Portugal, Italy and Ireland, all of whom have begun broadcasting a monthly program produced by young people working at the five stations. The exchange was instigated by Radio Panach, located in the French city of Revin. One In a first project, youth from Radio Panach produced a series of programs which show their vision of life for young people in their four partner countries. The programs were then broadcast by all five stations; in return, each will produce a show which responds to points raised by that of Radio Panach.

This marks the beginning of an exchange that will soon include visits by the youth to all the different participating stations. This next phase will provide young people with the opportunity to learn new languages and radio practises, to share knowledge, and to enlarge their vision of Europe.

Message-ID: <1993Apr26.052124.18945@gagme.chi.il.us>
Source record: 43315

Excerpt From: WEOS-FM <BLACK%HWS1%HWS.bitnet@CUNYVM.CUNY.EDU>

:WEOS has been granted the radio rights to the Men's NCAA Lacrosse Championship
:Memorial Day Weekend from College Park Maryland, and will be offering this
:program nationwide as the NCAA Lacrosse Network. The four games include the DI
:semi finals, the DIII Final and the DI final. The broadcasts are avialble to
:all stations, and with the exception of the "home school" station, this is the
:only place to hear the broadcasts. [...]

Ha, ha, ha-ha ha! We busted your exclusive! ::grin::

::smile:: Sorry, it's just so rare that WMUC-College Park gets a chance
to say something like that.

Seriously though, does the home school station always "automatically"
have broadcasting rights, or did we (WMUC) have to be included in the NCAA
deal which was made with you?

(I'm just a lowly DJ, I don't know how it worked out for us.)

On a side note, I am pretty sure we are only broadcasting the games that
Maryland will be playing in. I would guess that's a pretty standard move
too.

-Rob

## 578. No Creole for Radio Enriquillo

Newsgroup: rec.radio.broadcasting
Date: 1993-04-26 05:25:33 UTC
From: AMARC@p2.f406.n250.z1.Fidonet.Org
Message-ID: <1993Apr26.052533.19015@gagme.chi.il.us>
Source record: 43316

Radio Enriquillo forced to stop Creole broadcasts
==========

>From the time of Haiti's September 1991 coup until October 1992, Radio Enriquillo in the Dominican Republic played a crucial role in disseminating uncensored information to their Haitian neighbors.

In October 1992, after months of mounting threats against the station and its personnel, Radio Enriquillo finally suspended its broadcasts into Haiti.

Radio Enriquillo began providing information smuggled from Haiti immediately after the coup, in the form of a 90 minute-daily newscast in Creole, Haiti's national language. Four months later the station was ordered to suspend the Creole news program by the Dominican Republic authorities.

Using a loophole which allows the broadcast of Creole music, Radio Enriquillo's team began singing the news, accompanied by a guitar and bongos, for two hours a day.

The station began to attract more attention from the Dominican Republic's government, following complaints from Haiti's de facto regime.

In mid-July 1992, the station was ordered to stop all Creole broadcasts under threats of closure. Radio Enriquillo was again able to get around the restrictions, by translating information into a kind of Creole-Spanish.

Threats and intimidation against station personnel increased. Finally, on October 29, 1992, Radio Enriquillo completely ceased its Haitian news program. On that day, Catholic bishops from all over the hemisphere left the Dominican Republic, where they had been staying, prompting fears that the government would react swiftly against the station.

Two new, pro-Aristide stations have emerged in recent months: December 16 Radio, which broadcasts into Haiti from the USA, and a small clandestine station broadcasting from inside Haiti for three hours a day.

Source record: 43318

Europe: common problems, east and west
++++++++++++++++++++++++++++

Despite considerable differences of perspectives resulting from decades under opposing social and economic systems, Europeans share many common problems and goals in terms of improving access to the media.

This was one of the conclusions drawn by the 250 participants who attended the colloquium, "Media and Citizens in the Common European House," held in Oujgorod, Ukraine in October 1992. Organized by the European Federation of Free Radios (FERL) in conjunction with the European Civic Forum and the University of Oujgorod, the meeting brought together participants from 20 eastern and western European countries.

The Oujgorod meeting tackled two main themes: citizens and the media, and the role of the European media in the prevention of conflicts.

Media accessibility
==========
Citizen access is as much a problem in the east, where state monopolies have been replaced by new, western-style commercial monopolies, as in the west, where critical analysis has taken a back-seat to "sound-bites" sandwiched between advertisements. In the east, one of the key problems is the distribution of frequencies. To whom do the airwaves belong, and who should control their use? Since the end of the cold war, a large chunk of the spectrum has remained in the hands of the armed forces. Delegates agreed that the airwaves should be considered public property, and frequencies put at the disposal of the civil sector.

Discussions at the colloquium centered around the need to create and support a "third sector" of independent media which would allow for greater citizen access and promote intercultural contact among different communities. One Ukranian participant stated, "In the west, free radio must be preserved. Here, it must be born."

Universities were cited as the ideal structures for the establishment of free radio stations in eastern Europe. As such, young people have a very important role to play in the creation of new stations.

Radio Altera, based at the University of Oujgorod, was established by local students and youth. The station was on-air for the duration of the meeting, following which it received a permanent license to broadcast. Students from several eastern European countries expressed an interest is setting up their own stations. Participants decided to send a letter recommending the establishment of university stations to all central and eastern European universities.

Media and the prevention of conflict
==========
Over twenty participants from former Yugoslav republics testified to the role played by the state media in fuelling ethnic hatred and preparing the population for war. Independent media, such as Radio B92 in Serbia, have suffered pressure from the government. The republics are isolated from each other, as well as from the rest of Europe.

Participants from the former Yugoslavia resolved to establish an alternative information network. Its first project will be a monthly program in Serb and Croat languages, for broadcast to refugees in other parts of Europe.

The western media have contributed to the creation of stereotypes and the promotion of hostility against immigrants, Jews and other communities, particularly in Germany, where media coverage of attacks on immigrants and refugees served more to increase hostilities than to diffuse them.

The experience of Radio Echo of Moscow, an independent station in Russia that broadcast uncensored information during the 1991 failed coup, served to stress the need for the creation of more "third sector" radio stations. Its representative explained that many Russian stations have gone commercial, turning to advertising for revenue; thus one of the priorities for independent stations such as Echo of Moscow is to secure the funds to operate in an autonomous manner.

Conclusions
==========
Among the plans for action coming out of the meeting were:the development of initiatives promoting inter-cultural dialogue and understanding; support for Radio Altera and other university stations; and a letter to all European governments urging them to guarantee a civic media sector within their audiovisual laws. Follow-up to the meeting will take place at the FERL's fourth annual congress in April.

Lisa Vinebohm

<lots of format code stuff deleted>
There are a lot more, and they WOULD be a good addition to a FAQ. Anyone wanna write the list? Bill]

AOR Album Oriented Rock. Usually a mix of classic and current rock, usually leaning heavily on the classics. Variations on the theme include:
COR Current-oriented rock (more current, less classic)
AAA Adult alternative airplay (25+ semi-alternative leaning, probably heavy on the currents)
CR Classic rock.
CC Contemporary Christian.
BM Beautiful music. (How appropriate.) Other acronyms I've seen for this include B/EZ, or just EZ.
MOR Middle-of-the-road. This can be similar to Full Service; or, at least, a Full Service station can program music from the MOR stable. This has broad interpretation, meaning any subset of well-worn hits from the 40s through the 80s.

I used to think there was an "official" list of format codes, but it seems like many have been made up on the fly.

[Moderator's Note: Thanks, Jim. Now, who wants to add to this list for the FAQ? Bill]

Source record: 43320

Hi. Just wanted to introduce myself, as I've been lurking for some time. I'm the 7p-12mid jock at WCFB-FM `Young Country' B94.5 in Orlando, Florida. We were only the second station in the country to use the name Young Country (after KYNG/Dallas). On the air, I'm "Buzz" Jackson.

B94.5 is operated by NewCity Communications, the same company that operates Orlando market-leaders K92FM (also country, but more adult) and 580-WDBO. It was decided to have country on BOTH stations to monopolize the country audience in Orlando and to prevent another competitor from signing on a new country station.

Still learning the Usenet thing. Let's see if THIS gets posted and then I'll post some more down the road!

[Moderator's Note: Welcome to the group, Andy. We are a friendly bunch.. ... usually :-). Bill]

## 583. low-power (Part 15) radio

Newsgroup: rec.radio.broadcasting
Date: 1993-04-26 05:29:19 UTC
From: Rick Harrison <71174.2735@CompuServe.COM>
Message-ID: <1993Apr26.052919.19253@gagme.chi.il.us>
Source record: 43321
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Several folks have asked about the
Part 15 rules allowing unlicensed, low-power broadcasting.
Here are the basic limitations, as I understand them.

FCC rules permit unlicensed broadcasting within certain strict
guidelines. Unlicensed stations must not cause harmful
interference to any licensed user of the radio spectrum, and
must accept any interference they receive from licensed users.

On the AM band, the power supplied to the final RF amplifier stage
of the transmitter must not exceed 100 milliWatts (that's one tenth
of a Watt). Since no RF amp is 100 percent efficient, your actual
radiated power will be less. The total length of the antenna, plus
the feedline running from transmitter to antenna, plus the ground
lead (if one is used) must not exceed 3 meters (9.8 feet).
Frequencies from 510 to 1705 kHz can be used.

A 3-meter-long antenna isn't very efficient at AM broadcast
frequencies. Tricks for improving performance include: maximize
the antenna's diameter; use an antenna tuner (a variable inductor)
between the transmitter and antenna; build a good ground system;
mount the transmitter right at the feedpoint of the antenna.

Carrier current AM broadcasting is permitted on educational campuses.
In this form of broadcasting, the signal is pumped into the electric
wiring. The rules do not limit the power used, but the signal must be
confined to the campus served.

On the FM band (88.0 to 107.9 MHz), signal strength is limited to 250
microVolts per meter, measured 3 meters away from the transmit antenna.
Such a signal may be audible within a 1200 or 1300-foot radius, but
low-noise stereo reception will be confined to a 100-foot radius or less.
(Theoretically, in free space it only takes about 12 nanoWatts to produce
a field strength of 250 uV/m.)

There's also the 1750 meter band (160 to 190 kHz). Unlicensed trans-
mitters are limited to one Watt of power and the antenna is limited
to 15 meters (49.2 feet). Ground-wave propagation at these low
frequencies is great, and a 1-Watt Morse code transmission can be
heard hundreds of miles away. This band is too noisy and too obscure
to be used for broadcasting, though.

A couple of years ago, I self-published a book about low-power radio
broadcasting, the Alternative Radio Handbook; I am now preparing
the 2nd edition.

## 584. Directional Antennas

Newsgroup: rec.radio.broadcasting
Date: 1993-04-26 05:50:56 UTC
From: Theodric Young <theodric@world.std.com>
Message-ID: <1993Apr26.055056.19450@gagme.chi.il.us>
Source record: 43322

Hello,

Our 360 watt FM station is considering the possibility of using a directional antenna. The advantages of such an antenna are obvious: it allows a station to broadcast at different E.R.P.'s in different directions, allowing a station to maximize their coverage without interfering with nearby adjacent stations. I've heard, however, that such an antenna's interference pattern can cause localized "nodes" in areas near the transmitter, and that reception in these "nodes" can suffer.

We are a small college/community station. We don't pay attention to ratings. Our listening audience is not huge (although it does list as greater than 1% in Arbitron), but it is very loyal. Our mission is to provide the best radio programming that we can to the Greater Boston Area. Therefore, we don't feel that it is in our interest to sacrifice the reception quality of a few nearby listeners in order to gain new listeners further away.

So my question goes out to Chief Engineers and technicians who have worked with direction FM antennas: How well do they work? What drawbacks are there? What kind of unforeseen problems have you encountered? Are these "nodes" (is there a better name for them?) a problem? Do they exist (outside of my imagination?)? How does reception change--both locally and in the fringe areas of coverage--with such a system?

I look forward to reading your replies.

[Moderator's Note: This is a good question, perhaps one for the FAQ. I would greatly appreciate it if one of our antenna gurus would POST the reply to the group instead of/in addition to emailing the poster. Bill]

<wonderful AAHS post deleted>

This is great! It looks like AAHS picked up where "Kids America" left
off. Unfortunately, "Kids America" went bust in 1986 and the host (or
hostess?) took it locally to WXPN, Philly.

What's wrong with satellite feeds, anyway? :)

[Moderator's Note: Don't get me started :-), too late! :-).
I have a personal dislike for the current incarnation of 'centrally
programmed' (Read: Satellite fed) radio for three reasons. 1) It takes away
the 'local flavor' of radio and makes everything sound 'homoginized' and
canned (IMHO). 2) It makes it even harder for new up-and-coming broadcasters
to 'cut their teeth' by drastically reducing the number of small market
stations employing air talent. 3) Unlike 'network' programming of the past,
todays satellite feeds attempt (in a feeble and unconvincing way [IMHO]) to
fool the listener into believing the signal is local, by not announcing the
fact that they are a network, and by inserting local ID's in the DJ's voice
timed to coincide with the actual DJ's talk. Before I get deluged with a
hundred letters telling me the fiscal realities of station operation, let me
say that I realize the financial attractiveness of such services. That does
not mean that I have to *like* it. I think it is the sneaky, pandering
attempts to sound 'local' that insult and offend me the most. Radio AAHS
does not do that. They mention, somewhat regularily, that they are
a 'network' and that they have 'affiliates' which air the program in several
cities... etc. Much more honest. Bravo! Oh well... *YOU* asked :-). Bill]

Interesting that you mentioned "Kids Radio". I'm here in Tempe, AZ (ASU - Phoenix area), and a co-worker told me about it. I hadn't heard/read anything, and I couldn't seem to find it. Do you happen to know where I can locate it on the dial here? She (the co-worker) has since forgotten where it is.

[Modertator's Note: I don't know the station either, but I do know that it IS on AM, so scan your local band till you find something 'different' and it is probsbbly AAHS. Note, I think that all (or most) of their affiliates have calls that are some variation on the work 'kid', such as KYYD somewhere in Texas. I am waiting for a full package of info from them and I'll post another article. Bill]

>From: New Liberation News Service <nlns>
>Subject: NLNS: Black Liberation Radio

Mbanna Kantako and the Micro-Radio Movement
Michael Townsend

(NLNS)--Mbanna Kantako is black, blind, broke, and on the verge of creating a media revolution in America. Kantako, who lives just up the street from Abe Lincoln's home in Springfield, Illinois, is a 31-year-old unemployed public housing resident who operates the nation's most notorious unlicensed radio station. Known as Black Liberation Radio, it operates on a 1-watt transmitter the size of a toaster with a broadcast range of only one mile.

Kantako's station is six years old and for the last two and a half years has operated in flagrant violation of a federal court order to cease broadcasting. No one is quite sure why the government, so far, has not enforced its court order. Kantako vows he is willing to go to prison if need be, and supporters of the station say they will ask Amnesty International to declare him a political prisoner if he is jailed by the government.

Kantako (an adopted African name which means "resisting warrior") started broadcasting six years ago as a result of his disgust with the mainstream media and their failure to cover news, interests, and music of the black community. Low-watt radio was his avenue for providing an alternative. The station was largely ignored by the local powers-that-be until Kantako broadcast a series of interviews with blacks who had been brutalized by the local police. The police chief responded by reporting his unliscenced broadcasting to the FCC. When the FCC could not get Kantako off the air voluntarily, they fined him $750. When he refused to pay, they took him to federal court. Kantako then refused to participate in the court process because the judge would not appoint an attorney for his defense and thereby lost the case by default.

The federal judge issued and order on March 30, 1990, that was supposed to shut down the station, but Kantako has defied the court order and continues to broadcast. Springfield police then retaliated in another cowardly way against Black Liberation Radio. Mbanna Kantako, Jr., Kantako's 9 year old son, was recently arrested, booked, fingerprinted and photographed for a police mug shot for being involved in a shoving match during a soccer game at his elementary school! The arresting officer--none other than a policeman who patrols the Kantako neighborhood when he's not moonlighting as a "security guard" for the school district. Kantako has responded by removing his 3 children from public school and teaching them at home with his wife Brenda's assistance.

In retrospect, he says it's the best thing that could ever have happened for his kids. The response of mainstream media in the Illinois

capital to the intriguing and gutsy Black Liberation Radio experiment has been uniformly negative, ranging from an almost complete failure by Springfield's nine commercial radio stations to cover the story, to occasional reports by the daily Copley Press newspaper focusing attention on the illegality of the station, to hostile and intentionally misleading reports by the local NBC-affiliate TV station.

Whatever values and principles local media people once swore to uphold in schools of journalism have gone completely by the board. Not one has defended the right to the free flow of information that we selectively demand of certain other countries. Not one has mentioned the racial discrimination that is so deeply entrenched in corporate media operations in the U.S. Not one has mentioned the pro-democracy potentials of Kantako's model. Racist corporate mentality, in other words, reigns supreme in Springfield.

A typical twenty-four hour programming schedule for Black Liberation Radio would look something like the following:

6:00-7:00 PM
Kanodi (age 13) reads the lattest chapter from Century of Dishonor, interspersed with politically conscious rap and reggae music.
7:00-8:00 PM
Mbanna Jr. (age 11) reads excerpts from J.A. Rogers' book 100 Amazing Facts About the Negro. He too mixes in music.
8:00-9:00 PM
Dia reads a chapter of The Miseducation of the Negro. More music between readings.
9:00-10:30 PM
Mbanna comes on with a live talk show called "Brothers at the Real Table." Using a $19 speaker phone, Kantako moderates a thought-provoking 3 or 4 way discussion with black activists and researchers around the country. The most frequent guests are author Terrance Jackson, out of New York; activist Bryan "Muata" Harris, out of Columbus, Ohio, and researcher Zears Mills in Los Angeles. The range of topics include the expected, such as police brutality, drugs, the courts, prison, AIDS, etc.; but just as often includes the unexpected such as the role of the World Bank, the GATT Treaty, U.S. foreign policy, genetic research, the European monetary crisis and an analysis of the federal agency known as FEMA-- and this is only a sampling.
10:30-11:00 PM
"Notes on the Devil's News." Mvanna, Dia and local guests discuss the day's news as presented in the establishment media, from a critical perspective.
11:00-1:00 AM
Kantako presents a mix of socio/political/economic commentary interspersed with rap and reggae music.
1:00AM-3:00 AM
Broadcast tapes of recent and historic lectures by black activists, researchers and scholars from around the country on a wide variety of topics. Black Liberation Radio has an amazing collection of such tapes and more keep coming in. The most frequent presenters are researcher

Steve Cokely, historian John Henrik Clarke, Malcolm X, Minister Louis Farakhan, Dr. Frances Cress Welsing, psychologist Amos Wilson, Professor Ivan Van Sertima, Jewel Poocrum and Dr. Barbara Justice. But there are scores of others too.
3:00-6:00 AM
Rebroadcast of previous night's 6:00-9:00 PM programs.
6:00-Noon
Rebroadcast of the previous night's 9:00 PM-3:00 AM programs.
Noon-2:00 PM
"Good White Sources." Broadcast tapes of lectures by whites critical of U.S. domestic and foreign policies and aggressions. Again, scores of presenters including Noam Chomsky, John Stockwell, John Jydge, Sidney Wilhelm and Barbara Honneger, just to name a few.
2:00-6:00 PM
Rebroadcast of the previous 9:00 PM-1:00 AM programs.

Speculation as to why the government has failed to enforce its court order centers around the possiblity that the Kantako case could serve as a legal test of the constitutionality of FCC licensing regulations. Kantako contends that FCC "financial viability" requirements for licensing are a violation of his First Amendment rights. He argues that it is unconstitutional to set standards that exclude large segments of the population from access to the airwaves. Kantako summarizes his case as follows.
1. Blacks (and other minorities) are underrepresented in the ownership and operation of radio stations in the U.S. by 600%.
2. FCC regulations and licensing requirements are blatantly discriminatory aginst minorities and low-income people.
3. It takes a minimum of $50,000 to start the smallest licensed F.M. station (100 watts). This fact means that not only are most minorities excluded from the airwaves, but so is 90% of our entire population, regardless of color.
4. The establishment media does not represent the interests and concerns of this excluded population.
5. Exclusion from the media is a form of social control that is undemocratic and a violation of the 1st and 14th amendments.
6. Micro-Radio is a way of beginning to empower low-income citizens; it's the voice of the excluded.

Kantako's case is gradually beginning to receive wide attention mainly due to coverage by the alternative press. The mainstream media has picked up on the case mainly as a "freak" story with tabloid-type coverage and little in-depth consideration of the important fundamental issues involved. No story has recognized the possiblity of Black Liberation Radio serving as a legal test case with national implications. None points out that the National Lawyers Guild is actively researching the case. Kantako's goal is to establish stations, like this, operated by Blacks, Latinos, Indians, Asians and other minority groups in low-income neighborhoods all over the country. (His model also has implications for developing countries which are struggling to maintain their cultural and political integrity.) He has already been contacted by grassroots organizers

and student groups from 45 states and four foreign countries. Kantako believes he has developed a cheap ($800 and you're on the air) and easily replicated model that ought to be operating to empower low-income people in neighborhoods all across the U.S. Activists in several other states are working on setting up stations.

The seriousness with which the establishment takes Black Liberaiton Radio's potential threat to its power base was dramatically underscored a year ago when the slug from a .357 magnum smashed through Kantako's front room window, missing his head by inches. The bullet temporarily interrupted a live on-air telephone interview Kantako was conducting on the subject of white supremacy. The Springfield Police didn't even bother to investigate. Kantako says such risks come with the turf of what he calls the "Micro-Radio Movement" and, legal or illegal, it may be coming to your city.

Mbanna Kantako may be contacted at: Black Liberation Radio, c/o 333 N. 12th Street, Spingfield, IL, 62702; (217) 527-1298. Michael Townsend can be reached at Sangamon State University, Springfield, IL 62794; (217) 786-6687.

Message-ID: <1993Apr28.070824.25542@gagme.chi.il.us>
Source record: 43331

[Post, requesting info on the negative effects of a directional transmitting antenna, deleted]

AM broadcasters talk about null filling on directional arrays. Apparently if the cancellation in a directional array is too sharp, the frequency response of the signal can be distorted in certain directions.

[Moderator's Note: I think that the original poster was discussing FM directional antennas, which are not active 'phased arrays' but, instead, parasitic reflector-director type of system (much like a 'yagi' receiving antenna). However I would *LOVE* to see some in-depth discussion about active phased-array antennas and their various designs and characteristics. Any takers for this, and/or the original question about FM? Bill]

>it on live? and, when/where is this show on in the
>Washington, DC area?

Dr Dean Edell's show is originates daily from KGO-AM in San Francisco.
It is done live at 1-2pm Pacific time ... so you will probably want to
scan the AM band in DC at 4pm DC time.

# 594. Administrivia: Mail and news changes.

Newsgroup: rec.radio.broadcasting
Date: 1993-04-28 07:34:57 UTC
From: rrb@airwaves.chi.il.us
Message-ID: <1993Apr28.073457.26168@gagme.chi.il.us>
Source record: 43335

Greetings

There have been a few reports of mail problems such as articles being posted or emailed that never arrived, people not receiving the Internet Radio Journal even though they are on the list.

IF you ever send mail to any 'airwaves' address, ESPECIALLY if it is an article, and you do not get a response from me, OR see your article posted, please send mail to this 'alternate' address.

rrb@deja-vu.aiss.uiuc.edu

This is an Internet site where the rrb archives are stored AND that address is my (actually the newsgroup's) account on that machine. Since deja-vu is ON the Internet, and NOT part of the chi.il.us domain, it should not share any mail troubles that occasionally plague us here in Chicago :-(.

I am currently working on moving the newsgroup/Journal operations to that site and keeping the current site (GAGME.CHI.IL.US) as an alternate or backup site.

I am in need of some scripts or compilable source that will allow me to operate at this new site. Please email me for complete details of what I need to begin operating at the new site, which will bring faster and more reliable turnaround of news and email.

At this time, please continue to send ALL articles to rrb@airwaves.chil.us (My personal UNIX system, where the bulk of the work is done) or to post as you have been doing. Nothing will change from your end.

If you would like to assist in the shell-script writing, to facilitate the move to deja-vu, PLEASE email me at once.

Thanks to all

## 595. Feminization of the airwaves

Newsgroup: rec.radio.broadcasting
Date: 1993-04-28 07:36:10 UTC
From: AMARC@p2.f406.n250.z1.Fidonet.Org
Message-ID: <1993Apr28.073610.26234@gagme.chi.il.us>
Source record: 43333
Cross-posted to: rec.radio.broadcasting,rec.radio.info

The Feminization of the airwaves
==========

Ondes de Femmes (Women's Airwaves) was born in an attempt to improve women's access to the airwaves, particularly for women who have traditionally been marginalized, such as immigrant women, poor women, and ex-prisoners. The project began in April 1992, at Radio Centre-Ville, a multi-cultural station in Montreal, Canada.

Radio Centre-Ville serves several Montreal communities, broadcasting programs in Creole, Mandarin, Cantonese, Greek, Spanish, Portuguese, French and English. But despite the station's commitment to diversity, women and popular groups were under-represented in its programming and decision-making structures. There was also a pressing need to promote inter-cultural projects within the station itself, in an effort to avoid ghettoization and encourage mutual exchanges among the different communities represented.

Ondes de femmes began as a training and integration project. It aimed to integrate new women's shows into Radio Centre-Ville's existing multi-lingual programming. More and more women became involved, and Ondes de Femmes evolved into several weekly programs of the same name, broadcast in five different languages.

Today, Ondes de Femmes brings together 60 women from 20 organizations. They are Latin American, North African, Roumanian, African, Haitian, Chinese, Greek, and Quebecois; in addition to being students, mothers, grandmothers, professionals, ex-prisoners, and community workers.

Outreach and training
==========
Outreach to women was carried out through women's and feminist organizations and through women's committees within various ethnic associations. Women were invited to get to know and get involved in community radio; many accepted.

The project began with a one-day training and orientation workshop. After a providing a brief history of Radio Centre-Ville and the international community radio movement, the workshop's facilitators explained the different stages of program production and the role of each person in a production team.

The methodology was both participatory and feminist. It drew upon role-playing, discussions, listening to program segments and short theoretical exposes. It attempted to link the knowledge acquired by women in their everyday lives, to the basic principles of radio production.

Training continued in the field in the following weeks, with the participants sharing the tasks of producing a program. A trainer accompanied them during the preparation, recording and live broadcast of their programs. The participants were soon able to produce their programs autonomously.

A few months later, a second set of training and orientation workshops was offered to organizations that were interested in getting involved in Ondes de Femmes. The original participants were able to follow proficiency courses at this time.

Consolidating Ondes de Femmes
==========
The women who participate in Ondes de Femmes have the support of their associations, friends, families, and above all, their listeners. Listener feedback in the form of requests for information, suggestions for upcoming programs, and calls to congratulate the hosts, show that the programs respond to a genuine need.

The programs' themes are selected by the women themselves. They touch on issues such as society's perceptions of feminism, conjugal violence, aging, parent-child relationships, democracy, AIDS, and social rights.

Because certain organizations do not have the time or resources to participate on a regular basis, a monthly program in French was created to help such groups present their objectives and services, and thus increase the number of groups who use community radio to reach their target audiences.

In November 1992, women involved in the project created the Ondes de Femmes Collective, as well as programming, promotional and fundraising committees, to collectively ensure the development and pursuit of their experience. Several women have become involved in the decision-making bodies of Radio Centre-Ville. Strong support for Ondes de Femmes from its listeners and participants has encouraged the women to continue the work, and to search out new contacts on both the national and international levels. The Ondes de Femmes Collective is thus participating in the redefinition of the socio-cultural identity of Quebec's feminist movement, by way of radio.

JOB OPENING

The World Association of Community Radio Broadcasters is currently hiring a person to be responsible for the publication of the organization's newsletter, InteRadio

Job Description: Responsible for the coordination of the publication of InteRadio, AMARC's newsletter, published three times a year in English, French and Spanish. See the attached detailed description of the tasks.

Conditions: This is a part-time job with an annual salary of $10,000 paid at a base rate of $150 per day. The job will begin with the September issue of InteRadio and there will be some planning and evaluation work over the summer.

Location: Montreal, Canada.

Requirements: Experience in the areas of editing and journalism. Knowledge of the three languages of publication of the bulletin. Must be organized and motivated. International experience and a knowledge of community radio would be an asset.

Interested persons should send their curriculum vitae and supporting materials (articles, publications) to AMARC, 3575 blvd. St-Laurent, Suite 704, Montreal, Quebec, H2X 2T7.

Deadline: May 14, 1993.
==========/////////////=====

Description of Tasks related to InteRadio

1. Planning*: Preparation of an annual plan for the production of InteRadio including deadlines, objectives and themes. Planning of content for each issue in coordination with AMARC staff.

2. Editorial: Writing, editing and rewriting articles based on material received by AMARC's Documentation Centre and from correspondents. Maintenance and initiation of contacts with local and international correspondents.

3. Coordination of Translation**: Relations with translators and coordination of all aspects of translation work.

4. Coordination of Printing and Layout**: Coordination of work related to printing and layout including relations with printer and contracted graphic artist and responsibility for graphic

images.

5. Distribution*: Mailing. Upkeep of mailing list and subscriptions. Annual subscription campaign.

6. Financing*: Fundraising for InteRadio in collaboration with the General Secretary.

7. Evaluation*: Participation in an overall evaluation of InteRadio as an important part of AMARC's overall communication strategy.

==========////////======

*These tasks are conducted in coordination with other AMARC staff.

**Translation, printing and layout are contracted out.

If it was me, I would see what kind of modulation monitor the FCC was using and get one just like it. As of a few years ago, I recall the definition of overmodulation was 13 or more peaks per minute over modulated. You could talk to a supervisor with the FCC just to be sure your inspector was in line.

Source record: 43338

In response to what Rob at WMUC posted:
The NCAA has the rights to broadcast of ALL its Tournaments, and you have to get the right to broadcast your team's games in any Tourney game. In most cases, they grant the school station representing a participating school the right to broadcast that game or games. For Example, if Maryland was in the Tourney, you would get the right to broadcast their games, but not other games, even though the Tourney was held at College Park.
Our arrangement with the NCAA is to provide a national network feed of the Men's DI semifinal games and the DI and DIII final. If your team (Maryland) is in any of those games, you could broadcast it (I believe this is true. There is some discussion going on to determine if a one time only broadcast is permitted by stations that do not "regularly" carry the team.) However, You could not broadcast Towson, Loyola, or Hopkins, unless thye played Maryland. If you wanted to broadcast any game other than Maryland's contests, you would have to take the NCAA Lacrosse Radio Network Feed.
On a side note, we have sent letters to a bunch of Baltimore stations and have heard back from a few on waiting to see who was in it.
To put this in perpective, as an example, Syracuse has a commercial network broadcast their Football and Hoops, and their School station does the games as well. If SU is in the NCAA Tourney, you could have 3 broadcasts, the Commercial network, the school station, and CBS Radio. THat is how the NCAA has set those rights.

If you are interested in the Lacrosse Tourney, contact me, as we are doing the paperwork. It looks like UNC, SU, Princeton, Hopkins, and Brown are good bets for the Memorial Day trip. Maryland is a dark horse at the moment.

## 600. Special WBBM (Chicago Il) Anniversary

Newsgroup: rec.radio.broadcasting
Date: 1993-04-28 07:43:09 UTC
From: Will Martin <wmartin@STL-06SIMA.ARMY.MIL>
Message-ID: <1993Apr28.074309.26444@gagme.chi.il.us>
Source record: 43339

I heard an announcement on WBBM (780 kHz, Chicago) the other night that might be of interest to radio people:

On May 8th, 1993, WBBM celebrates its 70th Anniversary with some special interviews and other programming. This also celebrates 25 years of their "all-news" format.

There was no mention of special QSLs or anything like that, but I'd bet DXers writing in to report reception of this special anniversary might get something out of the ordinary in response...

That's all I know about it...

Regards, Will

## 601. Seeking Westwood-1 in Northern New York

Newsgroup: rec.radio.broadcasting

There's a "Kid's Radio" here in St. Louis, MO, on FM. 95.5 MHz, I believe. They went thru a mess of media coverage last year due to the original station carrying the format going off the air for financial reasons. There was a fundraising drive and a lot of publicity and they came back on the air a few months ago. Higgins probably remembers the details about this a lot better than I do; he pays a lot more attention to the local radio scene than I. Maybe he'll post some details.

I think they operate on a regular commercial basis, perhaps with supplementary donations or support from some group.

rerickso@cwis.unomaha.edu (Ronald D. Erickson) writes:
>If it was me, I would see what kind of modulation monitor
>the FCC was using and get one just like it.

In this neck of the woods the Feds us a spectrum analyser and bessel nul to get a calibrated scope trace of a FM signal internally generated. Then they look at the station in question with the scope and watch the overmod. There is some problems with their detection and they freely admit it. Over the air reception can be full of multipath and interferance. If it looks as if they want to follow up, they may visit your site and plug into your transmission line with a Bird slug.

>As of a few years ago, I recall the definition of
>overmodulation was 13 or more peaks per minute over modulated.

This has never been defined very well. It was meant for ATS and not for non-ATS systems and I belive it was 10 hits per minute. When I asked the FCC van folks they gave me this vague answer. I guess it depends on how much coffee they had that day.

>cities... etc. Much more honest. Bravo! Oh well... *YOU* asked :-). Bill]

I have to say that I agree with you! If I'm dial flipping and I hear
"It's 7 minutes past the hour on your oldies station" it leaves me cold.
"The hour?" What happened to 9:07? I've also noticed that these "services"
have a tendency to have more commercial breaks than their local counterparts.
(Probably where the "financial attractiveness" comes in) Thanks for
answering my question!

Chuck

C-64 guru of the Long Island PubNet Project! |"Oh, Fisher nuts!" *BAM*
E-mail: ckunz@src4src.linet.org <-- all goes here |"No, hon, Amy Fisher nuts."

[Moderator's Note: Well yes and no. Satellite feeds operate on a fairly
tight 'clock' that allows so many minutes an hour for network ads (that the
affiliates MUST carry) and X-number of minutes for local spots, weather etc.
Locally programmed stations can have as many, or as few, breaks as they
choose to. This is yet another reason that the satellite services all sound
the same. Radio AAHS is NOT a satellite programming service, per-se.. It is
a local station that exports it's programming. It existed as a local station
long before it hit the bird. SMN and such were conceived as satellite feeds
for sale to local affiliates, AAHS operates the other way around!. Bill]

## 609. Re: Radio AAHS (OZ) brings imagination back to radio.

Newsgroup: rec.radio.broadcasting

Message-ID: <1993May4.051328.16789@gagme.chi.il.us>
Source record: 43341

Do you have any points of contact at Radio "AAHS"? I am a free-
lance writer and I want to do an article about the netowrk for some
regional parenting magazines. We listen to the am outlet here in DC and
my kids like it, although it is very repetitious.

Any names and/or phone numbers appreciated.

John

[Moderator's Note: Call WWTC in Minneapolis during business hours and ask
for Chris Dahl. I am told that he is the man in charge. I don't know if he
is GM or PD or what. As far as repetitious, yes the DO have a 'core'
playlist that can get to be a bit much after a while. But in addition to
that rotation, they have well over 1000 tracks in their library, and they are
adding all the time. I suppose the tight rotation is aimed at the preceived
short attention span of small kids who want to hear 'their favorite song'
right away. I find that evening and midday segments are looser than morning
and after school hours. Overnights seem to have the broadest range of muisc.
Personally, I'd like to see them relax the playlist a bit, but then again, I
am not paying the bills there and what they are doing seems to work. Bill]

# 610. Bush Radio in Cape Town South Africa

Newsgroup: rec.radio.broadcasting
Date: 1993-05-04 05:17:33 UTC
From: amarcho@web.apc.org
Message-ID: <1993May4.051733.16935@gagme.chi.il.us>
Source record: 43345

SOUTH AFRICAN COMMUNITY RADIO EMERGENCY

AMARC received a fax from Bush Radio in Cape Town South Africa today. Bush Radio (along with all of South Africa's community and independent radio projects) has been frustrated in its attempts to get a licence to broadcast and thus end the broadcast monopoly of the official South Africa Broadcast Corporation.

Last Sunday Bush went on the air in defiance of the government. On Saturday May 1 Bush will go on the air again. A demonstration in support of Bush Radio will take place at the station on May 1.

Faxes of support can be sent to Bush Radio (27-21) 448-5451. The telephone number of the station is 448-5450.

The following is from the fax we received.

Note: This is not an official Action Alert for AMARC's Solidarity Network, but it may become one.

bg
==========////////========

EMERGENCY

Last night Bush Radio was visited by officials from the Department of Post and Telecommunications. We were told that action will be taken against us if we continue to broadcast. This could take various forms. We could have our transmitter sealed (thereby taking us off the air), we could be prosecuted, and we would be liable to a fine of 10,000 rand, imprisonment of three years or both. We could also have our equipment confiscated.

Bush Radio will go on the air from 12 noon on Saturday 1st may. There's a good chance that the authorities will act against us as soon as we switch on. We are calling on all those who support our right to broadcast to demonstrate that support now.

Please inform other people in your organisation and publicise this demonstration as widely as possible. After all the work that's gone into getting Bush Radio on air this is a critical moment for ensuring that we stay on the air, and make it possible for other community radio stations to start up.

# 611. Re: Chicago winter Arbitron ratings

Newsgroup: rec.radio.broadcasting
Date: 1993-05-04 05:17:57 UTC
From: Bill Coleman <clmn@midway.uchicago.edu>
Message-ID: <1993May4.051757.16959@gagme.chi.il.us>
Source record: 43346

Bill,

As a longtime Chicago radio listener who has been out of the country since last August, I was very interested to read your ratings summary.

Could you satisfy my curiosity on a few points?

Have there been any significant programming changes on WGN, WBBM, WLS, WLUP, or WBEZ-FM aside from the ones you mentioned? Is Ed Schwartz getting any ratings these days? Anything new with the Sox/Cubs broadcasts?

Thanks a lot! I'll be back in June!

Bill

[Moderator's Note: WGN is steadily losing ground n Chicago radio. Who knows what we will hear on THAT station next :-) . They still run cubs and bears. WBBM maintains it's lead as the all-newser of choice, even though WMAQ seems to do a better job (IMHO). WLUP is still shuffling it's deck. Now the FM jocks are getting the shuffel. Who knows what effect that will have. Ed Schwartz, is doing pretty well, as far as I know, but he gets preempted a lot for the Blackhawks games. WBEZ is.. well.. WBEZ :-). NPR news and traditional jazz. Hope this helps. Bill]

# 612. WBCN personalities Where Are They Now?

## 613. Boston RadioWaves

Newsgroup: rec.radio.broadcasting
Date: 1993-05-04 05:18:53 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993May4.051853.17023@gagme.chi.il.us>
Source record: 43348

* Here are the 10 most listened Boston stations among 25-54 adults for
the months of January,February and March :

1. WBCN-104.1FM - "The Rock of Boston" Adult AOR (Infinity)

2. WODS-103.3FM - "Oldies 103" (CBS Inc.)

3. WMJX-106.7FM - "MAGIC 106" AC (Greater Media Inc.)

4. WXKS-107.9FM - "KISS 108" CHR/Top40 (Pyramid Broadcasting)

5. WBMX-98.5FM - "MIX 98.5" Hot AC (Atlantic Radio Ventures)

6. WBZ-1030AM - news all day/talk all night(Group W Westinghouse)

7. WSSH-99.5FM - "WISH 99.5" soft AC (Granum Communications)

8. WZLX-100.7FM - "Boston's Classic Rock RadioStation" classic rock(Infinity)
9. WBOS-92.9FM - "Soft Album Rock" soft AOR(Granum Communications)

10.WCLB-105.7 - "Hot Young Country" country music(Fairbanks Communications)

* Jeff "the Gonz" Gonzer,formerly a mid-day jock at a classic rocker WZLX,
who was fired by Infinity management at the end of March has turned
up as PM drive host/anchor on WHDH-850AM("The Information Station").
Station"). Do all the aging FM jocks end up on AM at some point of their
career.? :-)

* Speaking of WZLX-FM, the new Infinity station is gaining momentum in
the ratings race and has moved into top 10 among 25 to 54 year olds.
Meantime, Infinity's AOR powerhouse WBCN's overall ratings for the last
period stayed flat or dropped a little. WBCN is #1 in 25-54 group but
that's somewhat decieving since its success was largely due to Howard
Stern's spectacular numbers from 7pm-12am. Stern really pulled
some amazing numbers during his 4 weeks on WBCN air in this past ratings
period. There's a rumor of some changes at WBCN....Stay tuned.

* WZLX has finally settled on its weekday DJ line-up :

6-10am Chuck Nowlin
10-3pm Anne Cody
3-7pm Tom Sherridan (great voice)
7-12am Lisa Traxler
12am-6am Ed O'Neal

* With a recent departure of a weekend DJ Carolyn Fox from WBCN, that
station doesn't have a single female DJ or producer on its staff.
(Carlyn now works as a full-time DJ at a rock station in Providence,RI)
According to my 'BCN source, Carolyn was on the list candidates to succeed

very popular morning guy Charles Laquidara whenever that day may come...
It also probably means that Howard Stern has just moved to #1 on that
list...
To consider WBCN promotional spokesmodel Michelle "The Rock Babe"
Russo to be a WBCN staff member is a real stretch...
Not that I have anything against her physically...:-)

## 614. Another Boston station to change formats

Newsgroup: rec.radio.broadcasting
Date: 1993-05-04 05:22:28 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993May4.052228.17116@gagme.chi.il.us>
Source record: 43252

To say that so far this has been a nutty year in the Boston radio would be a huge understatement...

* Both Boston dailies reported this morning that Greater Media is planning to drop "Smooth Jazz" format at its soon-to-be acquired WCDJ-96.9FM. WCDJ-96.9FM has been with this format for the past 2 and a half years. Eventhough, it was never a success story in the rating books, it had a very loyal following among very desirable 25-54 year-olds. Greater Media - owner of the AC leader WMJX-106.7FM and WMEX-1150AM(simulcasts WMJX 24 hrs a day) - will take over WCDJ on either Monday(5/3) or Tuesday(5/4). Reportedly, Greater Media will bring...country format to the air starting in a about a week(5/10) while it simulcats WMJX's AC sound on 'CDJ during that transition week. If 'CDJ goes country, Boston will have its second country station. WCLB 105.7FM(formerly WVBF) switched to country on February 12th. Greater Media people are sending out faxes to 'CDJ advertisers today telling them that the station will go commercail-free until July 4th.

Personally, I don't think 'CDJ will go to country programming. IMO,the more likely thing to happen : 'CDJ simulcasts WMJX-FM's signal 'till about July when Greater Media decides what to do. I think 'CLB knocked the wind out of Greater Media when 'CLB people found out about Greater Media's original plan A which called for 'CDJ to become a country station.

Greater Media couldn't react fast enough because it was still waiting for the FCC approval which took what it seemed like forever to obtain. The reason for the delay could have been attributed to Greater Media's probems with the FCC regarding its LA station(KLSX) which was heavily fined for some Howard Stern's remarks.

-Mark

## 615. More on Formats

Newsgroup: rec.radio.broadcasting
Date: 1993-05-04 06:45:12 UTC
From: "Chip (C.D.) Kelley" <chipk@bnr.ca>
Message-ID: <1993May4.064512.18384@gagme.chi.il.us>

Off the top of my head, here are some format definitions and examples
of stations that carry the respective formats (and subformats):

[Moderator adds stations marked with a (*) . Bill]

AC (Adult Contemporary)
- adult-oriented pop/rock; no hard rock
KOST--Los Angeles "Coast"
KVIL--Dallas/Fort Worth
KLTR--Houston "K-Lite"
WLMG--New Orleans "Magic 102"
KMGL--Oklahoma City "Magic 104"
hot AC - generally 80s-90s uptempo adult hits; format presentation
and music more closer to AC than CHR
KYSR--Los Angeles "Star"
WPNT--Chicago "the Point"
KSRI/KSRY--San Francisco "Star"
KAMZ--El Paso "Z93"
KURB--Little Rock "B98.5"
soft AC - almost entirely non-current soft AC songs; bascially
EZ listening with words
KXEZ--Los Angeles
KBAY--San Francisco/Oakland/San Jose
KLRX--Dallas/Fort Worth "Lite 97.9"
KODA--Houston "Sunny 99.1"
KBEZ--Tulsa
WLIT--Chicago "The Lite" (*)
Adult Standards - non-rock pop hits generally 40s-70s sometimes including
some soft AC music; often referred to as MOR ("Middle Of
The Road")
WQEW--New York
WJJD--Chicago
KAAM--Dallas/Fort Worth
WGUL--Tampa/St Petersburg
WBYU--New Orleans "Bayou"
WOKY--Milwaukee (*)
children's - children's songs/stories/programming targetting usually
targetted to children 2-11
KKDZ--Seattle/Tacoma
WWTC--Minneapolis/St Paul
KYYD--Abilene TX

CHR (Contemporary Hit Radio)
- current top 40/pop hits
WHTZ--New York "Z100"

KIIS--Los Angeles "Kiss"
KHKS--Dallas/Fort Worth "106.1 Kiss FM"
WBZZ--Pittsburgh "B94"
KRBE--Houston
KHFI--Austin
WPXY--Rochester NY "98PXY"
rock CHR - top 40/rock hybrid; no rap, urban, or AC crossovers;
hit rock and roll; "rock 40"
KEGL--Dallas/Fort Worth "the Eagle"
WYHY--Nashville "Y107"
KKYK--Little Rock "Kick 103.7"
KMYZ--Tulsa "Z104.5"
KTUX--Sherveport "Tux 99 Rocks"
WNFI--Daytona Beach
KISM--Bellingham WA/Seattle "Kissm'"
dance CHR - top 40/dance/urban hybrid; no rock or AC crossovers
WHQT--New York "Hot 97"
KPWR--Los Angeles "Power 106"
WBBM-FM--Chicago "B96"
KMEL--San Francisco/Oakland/San Jose
KUBE--Seattle/Tacoma "Cube"
KTFM--San Antonio "Hot 103"
adult CHR - top 40/hot AC hybrid; no hard rock, rap
KHMX--Houston "Mix 96.5"
WPLY--Philadelphia "Y100"
KWMX--Denver "Mix 107.5"
KYIS--Oklahoma City "98.9 Kiss FM"

Classical - classical, opera, fine arts
WNCN--New York
WFMT--Chicago
WRR--Dallas "Classical 101"
KRTS/KRTK--Houston "K-Arts"
WNIB--Chicago (*)
WFMR--Milwaukee (*)
country - blend of contemporary and traditional country
KSCS--Dallas
KIKK-FM-Houston
KAJA--San Antonio "KJ97"
KASE--Austin "Case 101"
WYRK--Buffalo
KXXY--Oklahoma City "KXY"
hot country - hit country, with little or no country songs over 5 years
old
WCLB--Boston "Country Club"
KYNG--Dallas "Young Country"
KKBQ--Houston "93Q Country"
WRBQ-FM--Tampa/St Petersburg "Q105"
WCFB--Orlando "B94.5"
KDIL--San Antonio "106.7 KDIL, the Armadillo"

KEBC--Oklahoma City
KDDK--Little Rock "K-Duck 100"
WUSN--Chicago "US-99" (*)
classic country - country oldies; "traditional country"
KIKK--Houston "AM65 Kick AM"
KILT--Houston "610 Rodeo Country"
KKYX--San Antonio "Classic Country KKYX"
KCAS--Lubbock TX "Old Time Country KCAS"

EZ Listening - beautiful music, instrumentals
WPAT--New York
KEZX--Seattle

Jazz WJZE--Washington DC "Jazzy 100"

New Age - instrumental new age often mixed with soft jazz and/or
AC; "new AC"; "adult alternative"
KTWV--Los Angeles "Wave"
WNUA--Chicago
KOAI--Dallas/Fort Worth "Smooth Jazz 107.5, Oasis"
WJJZ--Philadelphia

News WCBS--New York
KFWB--Los Angeles
WBBM--Chicago
KRLD--Dallas/Fort Worth "News 1080 KRLD"
KTRH--Houston
business news - business/finance-related news
WBBR--New York
WWWS--Buffalo "3WS"

Oldies - 50s-70s pop/rock oldies
WCBS-FM--New York
KLUV--Dallas/Fort Worth "K-Love"
KLDE--Houston "Oldies 94.5"
KONO--San Antonio
KOMA--Oklahoma City
WGGZ--Baton Rouge "Oldies 98.1"
WJMK--Chicago (*)
WEMP--Milowaukee (*)
WCFL--(near) Chicago (*)
Religious - music, preaching, or teaching programs
KNRB--Dallas/Fort Worth "Praise 1360"
KTEK--Houston "Praise 1110"
KSLR--San Antonio
KQCV--Oklahoma City
KIXL--Austin
contemporary christian
- current, pop/rock-based religious music
KLTY--Dallas/Fort Worth
KHSP--Texarkana TX/AR "Spirit 103.9"
black gospel - gospel music by black artists

KHVN--Dallas/Fort Worth "Heaven 97"
KDFT--Dallas/Fort Worth "Gosepl 540"
KWWJ--Houston "Gospel 1360"
KCHL--San Antonio
WYLD--New Orleans
country gospel - "southern gospel"
KPBC--Dallas/Fort Worth "Christian Country 77"

Rock
adult progressive
- adult modern rock format often mixing blues, rock, folk
KGSR--Austin
KWVS--Corpus Christi
WXRT--Chicago (*)
AOR - album oriented rock; mainstream, guitar-driven music
KLOS--Los Angeles
WLUP-FM--Chicago "Loop"
KTXQ--Dallas/Fort Worth "Q102"
KLOL--Houston
KISS--San Antonio "99-5 Kiss"
KLAQ--El Paso
classic rock - AOR of the 60s-90s
WXRK--New York "92 K-Rock"
KZPS--Dallas/Fort Worth
KZFX--Houston "Z107"
KZEP-FM--San Antonio "K-Zep 104"
KRXO--Oklahoma City
WZRR--Birmingham AL
WCKG--Chicago(*)
WKLH--Milwaukee (*)
modern rock - alternative/college rock
WDRE--New York/WIBF--Philadelphia
KROQ--Los Angeles "K-Rock"
KDGE--Dallas/Fort Worth "Edge"
KITS--San Francisco/Oakland/San Jose "Live 105"
KNDD--Seattle/Tacoma "the End"
WENZ--Cleveland "the End"
WAQZ--Cincinnati "Channel Z"
KNNC--Austin "107.7 K-Nack"
WCBR--Chicago "The Bear" (*)
Spanish - Spanish-language programming
Tejano - Spanish format of music made by Texas Hispanic musicians
KLAX--Los Angeles "X"
KXTN--San Antonio "Tejano 107"
KTNO--Dallas/Fort Worth "Tejano 1540"
KKPS--Brownsville/McAllen TX "Que Pasa"
KBSO--Corpus Chisti
KMRK--Midland/Odessa TX
WIND--Chicago
WOPA--Chicago

Sports - sports news, sports-related talk, and/or play-by-play
WFAN--New York
WSCR--Chicago "Score"
KFAN--Minneapolis/St Paul
KZEP--San Antonio
WQUE--New Orleans "Sports 1280"
WWLS--Oklahoma City (*)
Talk - interviews or call-in
KFI--Los Angeles
WLS--Chicago
KLIF--Dallas/Fort Worth
KSEV--Houston
WSMB--New Orleans

Urban - black-oriented hits format
WRKS--New York "Kiss"
KKBT--Los Angeles
WGCI-FM--Chicago
KJMZ--Dallas/Fort Worth "100.3 Jamz"
KBXX--Houston "97-9 the Box"
KIPR--Little Rock "Power 92 Jamz"
WJMI--Jackson MS
WNOV--Milwaukee (*)
Urban AC - adult urban often including gospel, jazz, and oldies
WVAZ--Chicago "V103"
KKDA--Dallas/Fort Worth "Soul 73"
KHYS--Houston "Y98-5"
KSJL-FM--San Antonio
WYLD-FM--New Orleans

## 616. Seattle Arbitron--Winter '93

Newsgroup: rec.radio.broadcasting
Date: 1993-05-04 06:45:23 UTC
From: briang@halcyon.halcyon.com
Message-ID: <1993May4.064523.18393@gagme.chi.il.us>
Source record: 43265

KMPS and KRPM are country.
KISW, KZOK, KXRX, KNDD, KMTT are all AOR.
KUBE AND KPLZ are CHR.
KIRO, KIRO-FM, KVI, KING are News/Talk.(note)KIRO simulcasts drive times only. KJR is all Sports.
KOMO, KLSY, KLTX, KRWM are AC.
KIXI is nostalgia.
KEZX is easy listening.
KING-FM is classical.
KCMS is contemporary christian.

I think that's all of them.

AND HERE ARE THE RATINGS...

12-plus F92 W93 25-54 F92 W93

KIRO(A) 7.5 7.7 KMPS(F) 7.6 8.2
KMPS(F) 7.1 7.2 KBSG(F) 7.9 6.9
KBSG(F) 5.3 5.5 KLSY 4.7 5.7
KUBE 6.4 5.4 KIRO(A) 6.5 5.5
KOMO 5.8 5.0 KRPM 4.8 5.5
KRPM 4.9 4.8 KZOK(F) 5.2 4.6
KISW 4.0 4.7 KMTT 3.8 4.5
KLSY 3.7 4.5 KISW 3.8 4.1
KVI 3.0 4.1 KOMO 5.3 4.1
KING(F) 4.6 3.8 KVI 3.0 4.0
KZOK(F) 3.7 3.5 KXRX 4.7 3.8
KNDD 2.7 3.4 KING(F) 3.3 3.6
KXRX 3.8 3.3 KLTX 3.5 3.6
KPLZ 4.2 3.1 KNDD 2.2 3.6
KING(A) 3.2 3.0 KING(A) 2.2 3.3
KLTX 2.7 3.0 KUBE 3.7 2.9
KMTT(F) 2.8 2.8 KJR 2.3 2.3
KIXI 3.0 2.5 KRWM 2.4 2.2
KEZX(F) 2.1 2.4 KPLZ 3.0 1.9
KJR 1.9 2.1 KCMS 1.8 1.7
KRWM 1.7 1.7 KEZX 1.7 1.7
KIRO(F) 1.0 1.4 KIRO(F) 1.2 1.5
KCMS 1.3 1.2

BTW, great article on the AAHS(OZ) station. Here in Seattle starting next month I believe will be "KIDSTAR", it started out as the Childrens Media Network and I am not sure if this is related to AAHS or not, but I like the concept.

[MODERATOR'S NOTE: I'd **LOVE** an aircheck when it signs on. :-). Bill]

See ya.

## 617. Professional sports on FM radio

Newsgroup: rec.radio.broadcasting
Date: 1993-05-04 06:45:42 UTC
From: slutsky@tesla.njit.edu
Message-ID: <1993May4.064542.18435@gagme.chi.il.us>
Source record: 43253

Thank you to those who answered my query on professional sports broadcasts on FM radio. The stations did not have to be flagship stations. I did get some replies about minor league teams. Here are the results:

Football

Cleveland Browns WMMS 100.7
Indianapolis Colts 94.7
Dallas Cowboys KVIL 103.7
Houston Oilers KLOL 101.1
Washington Redskins WGMS 103.5

Baseball

Toronto Blue Jays CFMO 101.1 Smith Falls, Ontario
Toronto Blue Jays CKO 97.5 London, Ontario
Chicago White Sox WYSY 107.9 Aurora, Il
Atlanta Braves WPCH 94.9
New York Mets WBAZ 101.7 Eastern Long Island
New York Mets WRCZ 101.7 Pittsfield, MA

Basketball

Los Angeles Clippers 101.9 "Overflow" station

Hockey (NHL)
New York Islanders WBZO 103.1
Tampa Bay Lightning WQYK
Boston Bruins WCIB 101.9 Cape Cod

Hockey (AHL)

Fort Wayne Komets WOWO 103.1
Adirondack Red Wings WZZM 93.5
Frederickton Canadians CKHJ 93.1
Hershey Bears WCTX 92.1
Springield Indians WTCC 90.7
Toledo Storm 95.7

# 620. WEQX Owner arrested

Newsgroup: rec.radio.broadcasting
Date: 1993-05-04 06:50:29 UTC
From: rcoryell@well.sf.ca.us
Message-ID: <1993May4.065029.18672@gagme.chi.il.us>
Source record: 43255

Radio buddies in Vermont called to let me know
that Brooks Brown, owner of WEQX Manchester
was arrested last week. I'm told the charges
were assault and resisting arrest. He is alleged
to have forcibly evicted his live-in companion
and her child. Said companion reportedly showed up
the next morning with State Police, who proceeded
to kick the door down and take Mr. Brown into
custody. He is reported to have drunkenly threatened
the officers, telling them he would use his radio station
to get even with them, and threatening anti-police editorials, etc.
Local paper headline something like "Owner of nationally
recognized radio station charged with assault." The "nationally
recognized" has to do with some mention in Rolling Stone, and not with
the fact that broadcasters all over the country recognize this
guy could be bad news...

This fella has stepped on more than a few toes in this industry...
I figured this info might be of interest to anyone who has ever had
a run-in with the volatile Mr. Brown.

## 621. Arbitron Surveys... Who needs Them ?

changes that might bring?? Bill]

## 622. Loud vs. Clean???

Newsgroup: rec.radio.broadcasting
Date: 1993-05-04 06:51:19 UTC
From: "A.J. Janschewitz" <p00445@psilink.com>
Message-ID: <1993May4.065119.18758@gagme.chi.il.us>
Source record: 43257

While I was temporarily off USENET and was reading Bill's (excellent) digest, I saw a thread pertaining to the subject of limiting, clipping, and other audio processing done by radio stations.

I'd like to jump in at this late date and perhaps revive that thread. It's been my experience of late that with the majority of car radios and many component-grade receivers seeking carrier rather than a human fishing for a signal, being the "loudest on the dial," especially for FM, where the level of modulation has no effect on signal strength, may be moot.

It seems that the FM stations - at least in this area - tend for a clean signal, having finally realized that the distortion created by composite clippers and chainsaw limiting is annoying, and especially so for females. Psychoachoustic tests have shown that women have a lower threshhold of tolerance of distortion than men.

At the station where I work part-time (I "retired" from full-time broadcasting about five years ago after six ulcers and having too many verses of "WOLD" ring true :-{ ), the bulk of the processing is on the microphone chain. The music ("bright A-C") is all off CD, and the definition and dynamics are well within reason, and a far cry from the "loudest is best" days. To be sure, there is some processing in deference to the ambient noise in the autos of those of us who don't drive Grey Poupon-mobiles, but I'd venture to say that in many markets the days of the modulation monitor hanging at 100% are over.

AM is another story ... I don't think we'll ever hear an end to the crunching in that band. But they buy carrier strength with modulation, and have lots of competition in the form of atmospherics, RFI, etc. to cut through.

Are we entering an age of clean sound (Stern and content notwithstanding)? We can only hope ...

Division III tournament isn't as strict. I am the color commentator for Stockton
State College men's basketball team and we were able to broadcast our Div III tournament game without any restrictions. The only problem is getting a phone line. Many schools don't have a phone line for us to use and it's either call the phone company and shell out over $200 or don't do the game. Catholic University offered to do a simulcast for Stockton State but wanted a fee from us (We kicked their ass and advanced in the tourny anyway).

Geoff Filinuk

## 624. What it taken this far to start a new FM Station!

Newsgroup: rec.radio.broadcasting
Date: 1993-05-04 06:56:27 UTC
From: Rodney_Fafara@3mail.3com.com

[Moderator's Note: Since Rodney is not going to be reachable on email, anyone wishing to send good wishes to him, can send email to me at wdp@airwaves.chi.il.us and I'll print it and send it along. His snail-address is at the bottom of this most interesting article. Bill]

As promised sometime ago when I requested information on STLs....
This what my wife and I have done so far to start a new commercial FM station.

First location: Santa Cruz mountains over looking the Monterey Bay area.

Time: Between 1987 to 1989.

In my young and ignorant days:

I first started by scanning an FM radio looking for a channel with no one on it. When I found one I thought was open, I then when to local office of the U.S.G.S. and got 7.5 minute topo and larger regional maps of my area. (note I'm doing all this based on a book I bought on how to start a radio station) I then spent two years of spare time hunting down coordinates and ploting them on my regional map in hopes of opening up a new allocation. (I did not use a data base or Engineer in fear of exposing what I was try do and where) In addiontion to this, I also plotted the 50 topo data points of 18 radials by hand to calculate my ERP and area of coverage.

After the "89" Loma Prieta earth quake, my wife and I concluded that being 1/4 of a mile off the San Andreas rife zone was not a good place to start a radio station or live, (both us being home at the time of the *event*). We then took our quest to be on the air and self-employed to Oregon. At least there the San Andreas falt was 200 mile out in the ocean.

In closing chapter I, I had found a freq. that might have worked although it was short spaced by 2 KM and most likely 10,000,000 other people would have filed on top of us if we were able to open the allocation for this location. By this time I had learned you could only keep what you were doing a secret for so long before it became open to the public, but the earth quake changed all of that anyway.

Chapter II

Two years latter I'm a little smarter...note I only said a *little* smarter:

Once we found a place we wanted to live with very few radio stations, I still insisted on hand ploting (for cost reasons this time) the minimum

distances to open a new allocation (much to the dismay of my wife who wanted to use an Engineer). Now I have to give a lot of credit to her, for patience and use of the phone. She was able to obtain some 80+ coordinates of transmitter sites with just a few phone calls. Anyway we applied and were turned down three time to the FCC to open a new channel before I conceded to the help of an Engineer. It took the Engineer twice to find an open frequency, so I didn't feel too bad. The cost to find the open frequency was $800.00. You can get them for less, but you get what you pay for. What you need to look out for or take into consideration is getting a report from a data base that is not current and showing any pending issues and/or ones that could be in the mail at the time your report was taken.

After we found an open channel and petitioned to open it, we still continued to investigate other possible open frequencies we could use. As in, we were also working on moving an open frequency on a C/P that was granted but the station was never built and the FCC had revoked the C/P. Also, there was another allocation open in the same area where the filing window was just about to open. Our Engineer suggested we call to see if the person who requested it was going to fill for it, (sometimes it takes so long to get an channel allocated, by the time it happens the original person who filed has moved out of the country). Anyway, the reason we were going to ask if the person was still going to file was that we did not want to filing on top of someone, especially if they did all the work to open it in the first place. Not to mention the cost if you have to go to comparative hearing court (and I will later on). The attorney we talked to who represented the guy who had opened the allocation was kinda shocked when we told them we did not want to file if he was and said they would check for us. We were very surpised when the attorney called us back and said that their client was not going to file because he was about to get an AM grant that he had been working on for the last five years and the AM grant was more important to him than this FM allocation.

Now the fun really got started. We had less than three weeks to find a tower site and file. Credit to my wife again for good use of the phone. Now you have to understand we are just to regular middle income people 500 miles a way from where we want to start this station with no time off to go there and not a lot on money to pay someone to do it. It took two weeks and many lunch time phone calls, but she finally found a location where the person who owned it would sign a statement saying he would sell and/or lease us the site if we were granted the C/P. Hammett & Edison is our Engineer and I thank Bill for all of his time and effort in doing his part of the application. He had to do it twice because the first site we found did not work due to shadowing and coverage to the community of license. You have to be able to cover 85% of the city you serve with your 3.16 MV/M curve.

Our filing window was from Sept. 9, 1991 to Oct. 9, 1991, we filed at 4:59pm on Oct. 6th. One other person filed for the same allocation. It took us until May 25, 1992 4:59pm for us to reach a settlement with the

competing application. May 25th was the last day for us to submit our comparative hearing fee of $6,700.00. Please note the $6.7k is only the filing fee and does not include additional court cost, attorneys fees, your traveling expense to DC, and Engineering fees if needed. We didn't, but if we would have had to go to court we would have won. Mostly because we were going to live and work within the community of license and the other person was not. It then took until Nov. 6th for us to get the final C/P, with a few phone calls.

Since then we have had to file for a site move...again ($500.00 for a minor change + Eng fees) which was just approved 4/6/93, but this is probably the best site we could have for our community of service.

Our on air target date is 5/28/93, just in time for Memorial weekend. For the past six weeks we have been working on trying to get approved for $50k worth of lease equipment and now it's down to $25k. New stations are not easy to get funding for. Anyway, we have a plan B if need be to get on the air with the capital we have about $30k. It calls for a reduced transmitter size, less expensive equipment, and some used stuff. The original idea had been the newer the technology and equipment you have, the better chance you have of staying on the air longer, but it's coming down now, to just getting on the air.

The push to get on the air has to do with summer coming. We are located in a resonable tourist area and the summer will be the best time to get started and get sales. If we don't do it now we will have to wait until next summer, because I feel more confident about summer sales than winter, plus the weather is better, (it rains a lot in Oregon, you know). Lastly, I'm 40 years young and still working on my patience We've already waited 3 years and now the only thing hold us back is doing it, (a little more money would help), but we can do it. If anyone out there has some good used equipment they want to sell cheap, let me know. Things like a 250 to 500w transmitter, 4 or 6 bay antenna, remote control unit, mod-minder, micro wave STL or parts of, EBS monitor, stereo gen, or an 8 channel console. Thank you!

Well...in closing, cause this is somewhat long (but could have been longer). We leave for Oregon on 5/1 and I have 6 weeks off from work (I'm not quiting my day job just yet) to get things going. After that, we'll see where we are and go from there.

Recap on cost:
Engineering study and work for CP: $6.5k including the move.
Legal fees up to getting CP: $12k
FCC filling fees, including change: $2.5k
Note they are still holding the $6.7 we sent in 5/92 on the comparative hearing that never happened. Refund pending.
Est. for equipment & studio setup $60k if new, $30k used.

My original est. to do this was between $40k - $75k and we would have come closer to the lower number if there had been no complications, as in any other applicants etc.....

I will not be on E-mail any time soon for the next 6 weeks. Comments, questions, and/or good buys on used equipment can be mailed to:

KRBZ 99.5 FM
Home of the CRAB!
P.O. Box 599
Reedsport, OR. 97467
(503) 271-3300 (Not hooked up, cause we don't have a main studio yet.)

## 627. "tv guide" for radio

Newsgroup: rec.radio.broadcasting
Date: 1993-05-04 07:01:49 UTC
From: mhd@world.std.com
Message-ID: <1993May4.070149.19208@gagme.chi.il.us>
Source record: 43258

Has there ever been a commercial "tv guide"-like publication for
radio in any US City? For Boston? (This would be like a program
guide for every station in a metropolitan area.)

## 628. Re: FM-band Subcarrier Progamming

Newsgroup: rec.radio.broadcasting
Date: 1993-05-04 07:02:11 UTC
From: joe@netcom.com
Message-ID: <1993May4.070211.19246@gagme.chi.il.us>
Source record: 43259

The real action today in SCA is digital data. The number of digital data transmissions being added to FM subcarrier is amazing. Both 67khz and 92khz is quite active (in Chicago). In fact, the "motherload" of digital news wires (AP, Reuters, Dow Jones, etc. etc.) is carried on FM SCA as a packet type of coding. Mainstream is the carrier service and available on FM SCA and sat.

The modulation looks to be amplitude (QAM?) and freq. encoded...

## 629. Introduction to rec.radio.boadcasting (NEW)

Newsgroup: rec.radio.broadcasting
Date: 1993-05-06 09:57:40 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <1993May6.095740.26347@gagme.chi.il.us>
Source record: 43267
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Greetings:

Rec.radio.broadcasting (r.r.b) is a Usenet newsgroup which
was founded in April of 1992, in order to provide a forum for
discussion of topics pertaining to 'domestic broadcast radio'.
Already in existance was rec.radio.shortwave, which centers around the
International radio scene, and rec.radio.noncom who's focus is,
obviously, non-commercial radio. Rec.radio.broadcasting was intended
to 'fill the gap' between these groups.

The Internet Radio Journal is a periodic email digest consisting,
mainly, of articles found in the newsgroup. It is intended for people
who either cannot access the newsgroup from their system or for some
reason perfer a digestified format for reading. Subscriptions to IRJ
are free, and available to anyone who wants one, and who is equiped
with some form of email service.

-=*=- DOMESTIC BROADCAST RADIO -=*=-

By domestic, we mean broadcasts which are intended, primarily,for
reception in the same country/nation in which they originate. R.r.b
is an international newsgroup, though, and the term 'domestic' should
not be taken to imply 'USA' or even North American. Readers in other
nations are encouraged to participate.

-=*=- SUBJECTS -=*=-

If it has to do with broadcast radio, and not _specifically_ international
shortwave, it is welcome here. Occasionally an article which IS
primarily about shortwave will be posted if the subject seems broad
enough that the readership of r.r.b might be interested, or be able
to assist the poster in some way.

Generally, if a subject 'seems' like it would be of interest to the
broadcasting community (which includes those involved in creating,
transmitting or listening to broadcast radio) will be published.
These subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters and interests.
3) DXing (long distance reception) on the standard broadcast bands
4) Community broadcasting (including non-commercial and clandestine stations).
5) Pirate broadcasting (especially non-shortwave, domestic pirates).
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.

9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.
13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

-=*=- POSTING -=*=-

1) Post to rrb as you would any other Usenet group. The software does the rest.

2) Email your article directly to rrb@airwaves.chi.il.us. Using other addresses to post will needlessly delay your article. You might consider installing an alias in your mailer for emailed articles, especially if you post a lot of stuff. See the end of this file for all applicable addresses.

-=*=- POSTING GUIDELINES -=*=-

* If you post a question that is of potential interest to others in the group, ask that replies be posted, instead of emailed to you. We all would like access to the answers.
If you do receive email replies, post a summary to the group. This forum is only as good as it's posters and readers. Keep the info flowing.

* If you email an answer to a question, send a Cc: to the group's submission address, rrb@airwaves.chi.il.us, so we can all learn from your knowledge. When id doubt... POST POST POST! :-).

* PLEASE edit quoted text to a minimum! Most users of this group are fairly regular readers and do not need, or want, to read the entire text of a recent article in every reply. Of course, if the thread is less current, more quoted text may be appropriate. Use your brains (and your editor :->).

* If your message is basically a one or two line "Me Too" or "I disagree" post, consider emailing it to the poster. However if you go into some details as to WHY you agree or disagree, then please post it.

* If you are replying to an article in the Internet Radio Journal, simply use your mailer's reply feature, and again, edit the text to ONLY the article you are replying to, and include the article's name in the Subject field. Subjects of "Re: Internet Radio Journal" are confusing and may result in needless delays.

* If you post about a local radio station or personality, realize that 95% or more of the readers will know little or nothing about it. Offer a little background, like location, station format, type of

music played etc.

* Last but not least, avoid flames and personal insults. R.r.b has a high percentage of broadcast professionals among it's readers. We try to maintain a reasonably high brain to bulls*it ratio here. It is perfectly fine to say "I think that what you said is the stupidest bunch of crap I have ever heard", instead of "YOU are the stupidest jerk I have ever heard". If you *must* make personal attacks, do it in email.

-=*=- MODERATION -=*=-

R.r.b is a _very_ loosely moderated group. Normally, all legitimate articles will be posted to the group. Matters that may cause an article to be rejected by the moderator include...

* Articles which are not on (or reasonably near) the stated charter and scope of the group (domestic radio broadcasting) or pertain to 'non-broadcast' radio services, such as cellular, two-way, ham, citzens-band, and such.

* Articles that are too long for submission as-is. If your article is longer than 10k (10,000 bytes), consider splitting it into two parts, or better yet, edit it down to a more reasonable size. Check to see if you can eliminate any quoted text. If you believe that your article is of an especially urgent or inforamative nature, and you also feel that you cannot reduce the size without damaging the content, let me know and I will try to work with you.

* Articles which are merely multiple repetitions of an identical answer which has already been offered several times. Often these will be bundled together into a single article to conserve bandwidth and increase readability.

* Articles which contain 'miles' of quoted and multiple quoted text followed by a few lines or less of original text. Please edit quoted text to a minimum and try to adhere to the *50% rule*, that is 51 (or more) percent of original text to 49 (or less) of quoted text. If the thread is old, (not current) more quoted text is appropriate. Only the worst offenders are omited, usually I will edit quoted text myself, when I have time.

* Articles which are unwarrantedly offensive, abusive or contentious for the sake of contention. Personal attacks and ridicule are considered such. Discussion, even argument, of issues and opinions are welcomed and encouraged. Flame-wars and such are not. We have discussions here, not shouting matches.

Note: Since most articles are used, we do not send out confirmations. If your article *is* rejected, you WILL receive a note explaining why the action was taken. If you do not receive such a note, and you do not see your article in the group, notify the moderator at once and include a backup copy if you have one.

-=*=- ARCHIVES -=*=-

Archives of past Internet Radio Journals are kept for anonymous FTP at deja-vu.aiss.uiuc.edu . They can be found in the directory /misc/rec.radio.b-cast. In that directory you will find a file called INDEX, which contains the issue numbers of all Journals, and the title of each article contained within. The archives are updated every week or so. If you need help with FTP, write me.

The Journals are arranged in sub-directories of about 100 issues each, and are in compressed (.Z) format. If you have trouble accessing anything, or if you have any questions about the archives, send email to rrb@deja-vu.aiss.uiuc.edu. If you appreciate the archives, send your notes of appreciation to the site admin, C. Lance Moxley <lance@deja-vu.aiss.uiuc.edu>. He has been very gracious in his willingness to store our archives on his machine.

-=*=- ENJOY THE GROUP! -=*=-

I hope you enjoy the group. Remember, it is only as good as it's contributors. So don't be shy :-). If you have a question, or answer, even if you are not sure, post - post - post.

I am open to suggestions on how to improve this group. Send them via e-mail to wdp@airwaves.chi.il.us -or- rrb@deja-vu.aiss.uiuc.edu.

Thanks to all who have, and continue to, participate.

We now return you to your regularly scheduled newsgroup :-).

William Pfeiffer

## 630. Re: Radio AAHS (OZ) brings imagination back to radio.

Newsgroup: rec.radio.broadcasting
Date: 1993-05-08 05:53:42 UTC
From: melissa@spanky.Jpl.Nasa.Gov
Message-ID: <1993May8.055342.12367@gagme.chi.il.us>
Source record: 43268

>[Moderator's Note: Radio AAHS is heard in the LA area on AM 850 AND AM 830.

I was able to tune into AM 830. My boys really enjoy it. The other day they were listening to "storytime", they were reading Jack in the Beanstalk. As we were pulling into the garage, my youngest son didn't want me to shut off the car until the story was finished. We rushed into the house and I turned on the radio so that he could finish hearing the story.

[Moderator's Note: As I said in email, Melissa, I am happy you found AAHS, and that you and your kids both like it. I think that, other than the repetitious core playlist, this is one shining star of a format. I am awaiting more info to compile a comprehensive article in the subject. Bill]

# 631. *INFO* WBBM Chicago Anniversary Programs Sat. May 8

Newsgroup: rec.radio.broadcasting
Date: 1993-05-08 05:53:49 UTC
From: jtl@genesis.MCS.COM
Message-ID: <1993May8.055349.12384@gagme.chi.il.us>
Source record: 43269

Here is a little more info to follow up on a previous posting:

On Saturday night (May 8), WBBM Chicago (780 kHz) will broadcast programming to celebrate its 25th anniversary as an all-news station, and its 75 years of being on-the-air.

>From 7:00 to 8:00 pm CDT (0000-0100 GMT), a program originating from Chicago's Museum of Broadcast Communications will showcase 25 years of "Newsradio 78."

>From 8:00 to 10:00 pm CDT (0100-0300 GMT), Chuck Schaden's "Old Time Radio Classics" will feature interviews and reminiscences from the first 75 years of WBBM.

[Moderator's Note: I will set a VHS tape to record the audio for the four hours. I will give the tape to Scott Fybush and he can deal with aircheck requests :-).

Joe Lynn

## 634. Re: Another Boston station to change formats

Newsgroup: rec.radio.broadcasting
Date: 1993-05-08 05:56:50 UTC
From: fybush@world.std.com
Message-ID: <1993May8.055650.12563@gagme.chi.il.us>
Source record: 43272

WCDJ-FM has dumped soft jazz, effective sometime Tuesday (5/4) afternoon. I missed the actual switch, and would like to hear from anyone who may have it on tape :-) (Or for that matter anyone with _ANY_ WCDJ on tape for my archives...)

WCDJ is simulcasting WMJX-WMEX for now. They've reportedly applied for WBCS as new calls ("Boston's Country Station"???)...but look for both WBOS and WBCN to ask the FCC to deny those calls because they're too similar.

Scott Fybush -- fybush@world.std.com
"Another post with no mention of my employer!"

## 635. Boston's Smooth Jazz station is history

Newsgroup: rec.radio.broadcasting
Date: 1993-05-08 05:57:14 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993May8.055714.12588@gagme.chi.il.us>
Source record: 43273

Sometime this afternoon Boston's Smooth Jazz station WCDJ-96.9FM has discontinued its light jazz format and has begun simulcasting its sister-station WMJX-106.7FM. Did anyone in the Boston area actually catch the changeover?

WCDJ-96.FM was taken over by Greater Media earlier this morning. It has become Greater Media's 3rd station in #9 radio market. The other 2 GM's Boston properties are : WMJX-106.7 and WMEX-1150AM. WMEX-AM simulcats WMJX signal 24hrs a day. WCDJ is expected to be simulcasting WMJX signal till next Monday while its Waterfront studios are relocated into WMJX-WMEX's downtown offices. After the move is completed, 96.9FM will have brand new call-letters and format - WBCS which probably stands for Boston's Country Station or Boston's Classical Station or just simply to piss-off people at WBC*N* and try to claim some of Howard Stern's growing nighttime audience in the next ratings book. :-)

Stay tuned,

-Mark

## 636. Boston Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-05-08 05:57:24 UTC

Message-ID: <1993May8.055724.12617@gagme.chi.il.us>
Source record: 43274

Rumors are still all around Boston radio about WCDJ 96.9 Greata Media who owns WMJX 107.7 should be taking over WCDJ today. (Monday 5-3-93) The two rumors I have heard is that WMJX will simlacast over WCDJ then one of the following:

1) WCDJ will go COUNTRY

2) WCDJ will change to WMEX-FM and do WMEX oldies going after WODS?

I am leaning more towards Country. I think it will happen! Any Thoughts?

Andy

> planned hours of operation if the authorities allow them to continue?
>
> A single page of FAX could certainly hold a lot more information
> than was given in this message. Why'd they leave so much out?

Thanks for your comments, Will.

I guess different people want different infornation about
these things. Personally, for example, I am not at al
interested in the frequency of a radio station that I can't
hear, although I suppose that the message might have mentioned
that Bush is/was a low-power FM operation. Knowing that, I
suppose you wouldn't have been very interested in the hours of
operation of a station that you couldn't hear.

While the message may not have included all the information
that you wanted, it did include the fax and telephone number
of the station to allow you to contact it directly. That's
better than the New York Times will do.

Yours,

Bruce

# 638. Action Alert - South Africa

3575 St-Laurent, # 704 - Montreal, Quebec - H2X 2T7 Canada
Fax: +(514) 849-7129 - Tel: +(514) 982-0351
Email: amarc@web.apc.org

ACTION ALERT

SOUTH AFRICAN RADIO EQUIPMENT SEIZED

The transmitter of Bush Radio, a community radio station in Cape Town, South Africa, was confiscated by government officials on Friday April 30, 1993, one day before the station was to go on the air as part of a national campaign to free the airwaves and thus end the monopoly of the state-owned South African Broadcasting Corporation.

South Africa's community broadcasters decided to launch the May 1 campaign following two years of frustrated attempts to establish community radio in South Africa. The main demands of the campaign are for: a) recognition of community radio within the country's broadcast legislation; b) the granting of licences to the community stations that have applied and; c) the establishment of an independent broadcasting authority.

The following is taken from a statement issued by Bush Radio following the confiscation of their equipment.

"Our volunteer community networkers, who were feverishly preparing for (the) May Day broadcast, have now been robbed of their voice. This comes as a blow not just to Bush Radio, a non-profit organization, but to all other potential community broadcasters and to anyone who believes in a free flow of communication.

"Since last Sunday's inaugural broadcast Bush Radio has been inundated with enthusiastic calls from well-wishers within the community and messages of support from individuals and organisations locally and internationally. It is clear to us that Bush Radio is helping to fill the vacuum which exists as a result of the present monopolised broadcasting system.

"The government speaks democracy - but while they do so they shut down a community radio station whose sole purpose is to let people speak for themselves. Democracy does not work like this....

"We are well aware that we could have taken measures
to avoid the police, but we took a policy decision to be
as open as possible about our operation. We have never
acted in a covert manner."

Bush Radio requests that supporters send faxes to the South
African Minister of Home Affairs, Danie Schutte, at (27-21)
461-2359 and to the South African consulate nearest you. Your fax
can mention the following points:

1) That you have learned of the confiscation of Bush Radio's
equipment and that you request the government reconsider this
decision;

2) That you consider the recognition of community radio would
be a signal to the international community of the of the South
African government's commitment to free speech and its
willingness to continue the process of democratization in the
country.

Messages of support can be sent to Bush Radio at telephone
+(27-21) 448-5450 and fax +(27-21) 448-5451. Please send copies of
your faxes to AMARC's Emergency Action Network at the above
address.

I loved Cool gold, because it played some of the more unusual and
obscure oldies, instead of the same old oldies :) that a lot of other
stations played. Our local outlet was KOFY in San Francisco. KOFY
wasn't making enough on it, and as it goes, they dropped it last
year :(

## 641. RDS "Radio Data System'

Newsgroup: rec.radio.broadcasting
Date: 1993-05-09 04:41:10 UTC
From: jtl@genesis.MCS.COM
Message-ID: <1993May9.044110.3851@gagme.chi.il.us>
Source record: 43279

I recently bought a Grundig Satellit 700, and one of the features
of this radio is the "Radio Data System" circuitry which prints out
station information on the unit's LCD screen. This information
originates at the transmitter, and sits on a subcarrier (I guess)
to be decoded at the receiver.

In Chicago, RDS is already in place at one station: WLS-FM (94.7 MHz).
When you tune to that station, the LCD displays "TLKRADIO."

Does anyone know if this system is running anywhere else in the
country? I know this is supposed to be one of the new gimmicks
for FM in the 90s and beyond, but I'm curious as to who's running
the system today.

Joe Lynn

## 642. Mpls/St. Paul Arbs, AAHS & Misc.

Newsgroup: rec.radio.broadcasting
Date: 1993-05-09 04:41:38 UTC
From: SGRIFFITH@murrow.mpr.org
Message-ID: <1993May9.044138.3922@gagme.chi.il.us>
Source record: 43281

Here are the Winter Arbitron ratings for Minneapolis/St. Paul:

Station Format 12+ 18-34 25-64

WCCO 830AM News/Talk 16.1 4.1 12.1
"The Good Neighbor"

KEEY 102FM Country 9.2 11.0 10.5
"The FM Country - K102"

KQRS 92.5FM/1440AM Classic Rock 8.0 14.8 10.0
"KQ-92"

WLTE 102FM Light A/C 7.3 5.5 8.9

"The Light FM"

KDWB 101.3FM CHR/Dance 6.9 8.8 4.1
"101.3 KDWB"

KSTP 94.5FM A/C 6.3 9.8 7.5
"Always 95 and Sunny - KS95"

KTCZ 97FM New Adult Contemp 5.6 8.0 7.9
"The Cities 97"

KRXX 93.7FM Hard Rock 5.5 10.8 3.7
"93X"

KQQL 108FM Oldies 5.3 4.4 7.3
"Cool 108"

KSTP 1500AM Talk 4.7 3.5 4.8
"The Talk Station"

KJJO 104FM Country 3.8 5.0 3.9
"Country Thunder"

KLBB AM "Music Of Your Life" 2.7 --- 0.6

KFAN AM All Sports 1.4 1.8 1.9

WWTC AM Children 0.8 1.0 1.1

"Radio AAHS"

In comparison, here's how we did here at Minnesota Public Radio:

KSJN 99.5FM Classical 2.4

KNOW 91.1FM/1330AM News 2.8

(KNOW FM alone pulled a 2.3 12+)

The most popular morning show in the Twin Cities is Roger Erickson and friends ("The Good Morning Show") on WCCO, with a 23.2 share 12+. Second was Tom Barnard and the KQRS morning crew, at 12.3. John Hines and associates at KEEY-FM are third at 9.0, followed by KDWB (6.6), KSTP-FM (6.3) and WLTE-FM (6.2).

The Twin Cities radio dynamic promises to change in the near future with the addition of a new station at 100.3 (formerly WCTS-FM, a religious station). The hot rumor is that it will go Modern Rock (replacing KJJO, which went Country last year) and add Howard Stern in the morning. Those in the know are not talking. Program testing is going on now.

By the way, WCCO-AM & WLTE-FM (and WCCO-TV, for that matter) are owned by CBS. This book shows a 2 point gain since last summer - even without Twins baseball. KFAN-AM is co-owned with KEEY-FM - formerly Malrite, now Shamrock - and has the broadcast rights for Minnesota Vikings and Timberwolves games.

The talk about Radio AAHS struck kind of a strange chord in me. About three years ago, I was production director at The Breeze - an unsuccessful NAC satellite format. WWTC-AM was our Twin Cities affiliate til they figured that they couldn't make money with it, and quit. Just over a year after that they went with the all-kid format, to great critical (but not yet financial) success.

Anyway, glad to give you this stuff...I really enjoy the IRJ and look forward to seeing the next issues.

Best,

Steve Griffith
Studio Engineer
Minnesota Public Radio
St. Paul, MN
SGriffith@murrow.mpr.org

[Moderator's Note: As for the financial success of AAHS, they sure seemed to have a LOT of commercials when I was there a month or so ago. Way up from my first listening two years ago. Just the fact that they are in the book is good news for such a niche' format. Also interesting that they're share is higher in the 65+ and the 18-34 range than in the 12+. Really enjoyed my visit to MPR studios. What a playground! Bill]

## 643. Starwars Satellite Series Info

Newsgroup: rec.radio.broadcasting
Date: 1993-05-09 04:45:32 UTC
From: dawsob@rpi.edu
Message-ID: <1993May9.044532.3998@gagme.chi.il.us>
Source record: 43284

I asked for info a few days ago, and Steve Griffith graciously responded:

The "Star Wars" satellite feed happens each Sunday evening at 2000 EDT on NPR satellite channels 3 & 4. The satellite is Galaxy VI; channel frequencies are 74.2 and 72.8 mhz. I think they're on Episode 5 or 6 this week...there is a toll-free number at the end of the program to order cassette copies of the full series.

Enjoy...and may the Force be with you!

Steve Griffith
Studio Engineer
Minnesota Public Radio
St Paul, MN
SGriffith@murrow.mpr.org

Thanks alot, Steve!

If someone already knows that toll free number, can you mail it to me?
I'm not gonna be at the radio station for a while, so I won't hear it this sunday. (or the rest of them, for that matter).

Thanx Brian Dawson dawsob@rpi.edu

# 644. WCBS-FM to have Radio Greats Reunion May 15-16

Newsgroup: rec.radio.broadcasting
Date: 1993-05-09 04:45:47 UTC
From: slutsky@tesla.njit.edu
Message-ID: <1993May9.044547.4022@gagme.chi.il.us>
Source record: 43280

WCBS-FM New Yorks oldies station for the last 21 years will have another radio greats reunion the weekend of May 15-16. Previous reunions in 1984, 1989, and 1991 featured disk jockeys of the past which include:

Herb Oscar Anderson
Joe O'Brien
Jack Spector
Dean Anthony
Hal Jackson
Jack Lacey
Ed Baer
Charlie Greer
Gary Stevens
Dan Daniel
Dean Anthony

Current WCBS-FM jocks have also appeared
Harry Harrison
Ron Lundy
Dan Ingram
Bruce Morrow

Previous shows have included tributes the the radio personalities who passed away:

Alan Freed
B. Mitchell Reed
Murray the K
Bob Lewis

I am hoping that this year they will also feature some of the Djs from NeW York FM radio of the late 1960s and early 1970s. I'll pass on more information when it becomes available.

## 647. Re: "tv guide" for radio

Newsgroup: rec.radio.broadcasting
Date: 1993-05-09 04:50:13 UTC
From: rnewman@bbn.com
Message-ID: <1993May9.045013.4168@gagme.chi.il.us>
Source record: 43286

In article <1993May4.070149.19208@gagme.chi.il.us>, mhd@world.std.com (Mark H David) writes:
|> Has there ever been a commercial "tv guide"-like publication for
|> radio in any US City? For Boston? (This would be like a program
|> guide for every station in a metropolitan area.)

Someone actually tried doing this in Boston, around 1978.
I believe the magazine was called "Radio Waves" and it
came out monthly. It lasted about a year.

The people who put this out were associated with a group called
"Committee for Community Access" which intervened in several
FCC license challenges around Boston, trying to get more
diversity in local programming. At least one of their
campaigns was successful for a while; they got WDLW to adopt
a country music format, something that was missing in Boston
at the time.

I don't know if Jack Bernstein and Marty Kessel, two of the
principals in this enterprise, are still in Boston. Maybe I'll
look them up now.

[Moderator's Note: We had something in Chicago like this, but it died, was reborn again and died again. I think that the similarity in formats, coupled with the reality that most people could not care less about radio as long as it plays 'their' kind of music/talk whatever. We have a great columnist in Chicago named Robert Feder who reports on the radio/tv scene here, and few people outside of media read him :-(. Although if such a product was to work anywhere, it should work here. We have some of the most unique programming of (m)any major market(s). It's expensive to publish. If you don't have a high readership/advertising base it won't survive. Sad, but I think it's true. Bill]

## 648. Seeking stations/jobs in Austin, TX

Newsgroup: rec.radio.broadcasting
Date: 1993-05-09 04:50:25 UTC
From: rswiftrw@cc.curtin.edu.au
Message-ID: <1993May9.045025.4193@gagme.chi.il.us>
Source record: 43288

Hello.

I am looking for a list of contact addresses and phone numbers of radio stations in Austin, TX.

And if anyone can tell me what the commercial radio job market is like in the US (both in journalism and presenting), that'd be great.

Regards,
Rod Swift

[Moderator's Suggestion: **QUIT -- FORGET IT -- GIVE UP!!!!!** (I say that because if that is all it takes for you to give up, your finished before you start.) In other words if you +MUST+ be in radio and you are ready for slammed doors and the "WKYM" (We'll-Keep-You-<in>-Mind) syndrom, and you are willing to surmount the insurmountable odds, work in a small town for starvation wages doing virtually ANY format (or babysitting a satellite receiver) then *maybe* you will make it. Universities and broadcasting schools turn out thousands of prospective broadcasting talents each year. At the same time scores of small stations are abandoning live talent for satellite feeds every year. In short, more supply meets less demand. Personally I wish you the utmost success, but be ready for a lot of heartbreak and headaches along the way :-). Bill]

Source record: 43287

The replies on NCAA rights are correct. It does not matter if your team is DI
or
DIII, the NCAA still owns the rights. Your station from Stocton State did not
have to pay a fee, because you are non-commercial and you are the school station
representing one of the teams. A commercial station in town could have also
broadcast the game, but would have paid $25 for the DIII rights fee per game.
In addition, though you personally may not have, someone, probably the
School's Sports Information Director, filled out the paper work that allowed
you to broadcast the NCAA game that Stockton State was in. Anyway, both our
LAX teams are post season and the fun begins. I hope that clears that up a
bit, as the NCAA usually lets the "school station" broadcast the school's
contests in the TOurney, unless there are restrictive agreements preventing
it by the school's athletic department.

:: EURONEWS - May 10th, 1993 ::
:: Edited by Risto Kotalampi, rko@cs.tut.fi ::
::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::
```

EDITORIAL NOTE: Due to the lack of time to compile EuroNews this edition is not complete. More news from Europe in the next edition - hopefully there is more time available then. (RKO)

ESTONIA: There's a new private station on the air in a suburb of the Estonian capital, Tallinn. Called Nomme Radio, it operates on 1602 kHz, with just 10 watts of power. (BBCMS via SCDX)

There were major changes in Estonian Radio on May 1st. Frequencies broadcasting Estonian Radio's first channel were taken over by a new commercial channel called Radio 2. This will form part of the state radio, even though it will be financially independent. Programming includes 4 hours a day of VOA Europe. The first channel now uses the "Vikerraadio" frequencies. The third channel is being seriously cut. For the time being, rebroadcasts from Radio Liberty, Radio Free Europe, Voice of America, Deutsche Welle, the BBC, and Radio Sweden will continue on this channel. (BBCMS via SCDX)

INTERNATIONAL WATERS: A radio ship called "Freedom of Speech" has begun broadcasting what is called "honest news" to the former Yugoslavia from the Adriatic Sea. The effort is funded by the European Community. The transmissions are on 720 kHz and 98 MHz. (BBCMS via SCDX)

A new radio station is on the air in the ex-Yugoslavia area. The station is called "Radio Brod". It operates 24 hours a day with a power of 50 kW on 720 kHz where it has already been heard in Scandinavia during night-time. Radio Brod is located on a ship anchored in the Adrian Sea some miles off the ex-Yugoslavian coast. The station is owned and operated by journalists who are tired of the boring and biased propaganda broadcast by the many official radio stations of the ex-Yugoslavia. Radio Brod has been financed by an important donation from the EC. (JM)

This radio has been launched with the help of (among others) french organisations called "Droit de parole" (which means Right of Speech) and France-Libertes (founded by the French president's wife Danielle Mitterand). Their addresses are: Droit de Parole, 18 rue Clavel, F-75019 Paris 19 and France-Libertes, 1 place Trocadero et 11 novembre, F-75016 Paris 16. (Philippe Lievrouw via JM)

IRELAND: The Irish pirate station calling itself Radio Caroline has been heard on 3940 kHz, in parallel with the regular 6295 kHz. This station is heard weekends. (Andy Linton via SCDX)

ITALY: 1548 R Paperina (network: Top Italia Radio) has the address: Via Goffredo Mameli 71, 36100 Vicenza. (ET via SWN via ARC)

KALININGRAD: 1386 broadcasts now R Moscow World Service in English replacing Radio Ala. (OA via ARC)

LITHUANIA: Radio Baltic International, a joint project of Lithuanian and British companies aimed at broadcasting Radio Luxembourg type programs to Scandinavia, has been given permission to put a 200 kW transmitter on 684 kHz. Broadcasts were supposed to begin by July. But a station spokesman says a dispute with local farmers over compensation for crops damaged by construction has delayed the start until November, 1993. There is also confusion over a reported remark from the head of the British company involved that the station would use digital AM stereo, which the Lithuanians believe could interfere with their own stations. (Radio Vilnius via BBCMS via SCDX)

This station is very shadowy. The AM stereo suggestion is strange, considering no one in Scandinavia has equipment to receive this mode. Not only has there been no publicity for the station within the proposed target area, but Sweden's own first commercial radio stations will be appearing by July. If Radio Baltic International isn't on the air first, there won't be any audience to speak of. (SCDX)

RUSSIA: The Voice of Abkhazia has been heard on 7305 kHz at 1730-1800. It identifies as "Apsua Radio" (Abkhaz Radio), apparently broadcasting to the separatists in the breakaway Georgian region on Abkhazia. The broadcasts appear to be in Abkhazian except for a news summary in Turkish at around 1750. At around 1800 the transmission switches to Radio Moscow's Arabic Service. (BBCMS via SCDX)

684 R Baltika from St.Petersburg is noted on this frequency (ex-747 kHz). This is a former frequency of Radio Ala that is now off the air. (JM)

Radio Ala is off the air since February 15th. (OA via ARC)

UNITED KINGDOM: 603 kHz CD603 is now on the air. (MWC via ARC)

1584 KCBC has a new address: P.O.Box 1584, Kettering. (Steve Whitt via MWC via ARC)

Best 73s!

## 655. Help with DXing the USA from Europe.

Newsgroup: rec.radio.broadcasting
Date: 1993-05-12 00:01:13 UTC
From: mpc@ursula.inesc.pt
Message-ID: <1993May12.000113.2411@gagme.chi.il.us>
Source record: 43296

How can I listen to US radio stations in Europe ?

May be a simple question, but I really need information.

Thanks

Miguel Pupo Correia

## 656. AM radio dial in Fresno Ca?

Newsgroup: rec.radio.broadcasting
Date: 1993-05-12 00:01:32 UTC
From: martin@nosc.mil
Message-ID: <1993May12.000132.2459@gagme.chi.il.us>
Source record: 43291

I have been dx-ing am radio stations for over
30 years, and have logged more than 2800 of them.
I'm going to be in Fresno, Ca for a couple days, and am wondering
about the daytime dx conditions there. I assume I can log
places like Clovis and Fowler, but what about Lemoore, Madera, Hanford,
Oakhurst, all listed in my radio guides. And what about to the
south? Can I expect to hear Tulare, McFarland, and what about
Bakersfield stations?
Also, at night, are there any clear channel stations blocked by mountains
making it possible for some interesting dx?
I've never been to Fresno, but it looks like a good place for
dx-ing lots of local low-power stuff.
Thanks,
Doug Martin martin@nosc.mil

## 657. *Technical* antenna question

Newsgroup: rec.radio.broadcasting
Date: 1993-05-12 00:03:20 UTC
From: weaver@sfc.sony.com
Message-ID: <1993May12.000320.2539@gagme.chi.il.us>
Source record: 43155

I have a question about power gain from "stacking" dipoles,
particularly at 5/8 wavelength intervals.

It's a common thing in the broadcasting biz to stack dipoles ONE
wavelength apart, and get a power gain of N from N radiators. It
works 'cause the FIELDS add together and you divide the POWER between
them. Thus you wind up with N^2/N = N times the power "out there."
This I understand okay...

But what about (take the simple case) a pair of dipoles at 5/8 wave
apart, fed in phase? The ARRL Antenna Book, in that page full of
azimuth patterns, shows major lobes horizontally, minor lobes (-6 dB)
vertically, and a gain of 4.8 dB, or a factor of 3! I am sadly unable
to visualize how this works.

Furthermore, how much gain can one get from stacking more dipoles at
5/8 wave? I have long wanted a nice omni horizontal gain antenna for
our RPU repeater, and if 4 bays of this would get us 10 dBd I'd gladly
take the time to build it.

[Not really an RF engineer; just found the hat]

[Moderator's Note: ... and youy play one on Usenet :-). If youhave Eric's
answer, please post it to the group. Bill]

## 658. Boston now has 2 Country Stations

Newsgroup: rec.radio.broadcasting
Date: 1993-05-12 00:03:34 UTC
From: adalton@lynx.dac.northeastern.edu
Message-ID: <1993May12.000334.2569@gagme.chi.il.us>
Source record: 43293

Well after months of rumors, and wonder, Boston's Smooth Jazz station (96.9) made the switch to "Boston's Country Station" Country 96.9 (WBCS) The switch came around 4pm on Thursday afternoon. Now WCLB and WBCS can fight over who will be the leader in the Boston market for country. WBCS holds one advantage, to give a "free sample" there will be NO commercials until July 4.

According to the Boston Herald, Jim Murphy who has programed country in Boston and N. H. will take the job as PD.

It will get real intersting.....

Other news from Boston radio, WRKO (680am) had a house cleaning!! The only surivor was Talkmaster, Jerry Williams.

## 659. Ratings from Buffalo and analysis

Newsgroup: rec.radio.broadcasting
Date: 1993-05-12 00:03:46 UTC
From: spt@acsu.buffalo.edu
Message-ID: <1993May12.000346.2598@gagme.chi.il.us>
Source record: 43299

Buffalo radio ratings:

Station Format 12+ share

1) WYRK-FM 106.5 Country 9.8
2) WGR-AM 550 News/local talk/local sports 9.3
3) WBEN-AM 930 News/satellite talk/some sports 8.7
4) WHTT-FM 104.1 Oldies 7.1
5) WKSE-FM 98.5 CHR/Dance 6.7
6) WJYE-FM 96.1 AC/Lite 6.6
7) WBLK-FM 94.? Urban 6.4
8) WUFX-FM 103.3 Rock 6.2
9) WGRF-FM 96.9 Classic Rock 5.7
10)WMJQ-FM 102.5 Contemporary/No Rap 5.3

Also of interest is WWKB-AM 1520 (50,000) which has surged quite a bit since switching from a business format to general interest talk (led by Howard Stern) and lots of sports. It has a 1.0 share 12+ for 15th place and Howard is drawing a 1.6 share for 13th place in the morning. (The station was down around 20 last year). Howard has a 3.1 share of males 25-54 for 9th place in that category, up from 19th in the last book. Now if they'd only put something besides paid programming on that 50,000 watt signal after midnight......

Also of interest is the passing of WBEN-AM by WGR-AM. WBEN has been top dog for on AM for a long time. Until they lost all local sports teams to WGR a couple years ago, they held a comfortable lead as #1 in the overall market. While the sports have helped attract an audience to WGR, I think their lineup of local talk for all but 2 hours of the day is blowing WBEN's 0 hours of local talk out of the water (WBEN has Rush, Larry King, Jim Bohanen(sic) and Gil Gross). WGR's morning show has closed in on WBEN's with an 11.5 share to WBEN's 12.0. This is the closest anyone has come to WBEN in the morning in years (maybe decades). I think abandoning full service AC for satellite fed features and chopping an hour off the show to make room for Larry King during the day are big factors in WBEN's losing ground in the morning. Also the fact that most of their shows are tape delayed preventing participation by local listeners can't be helping any.

Country and news/talk are have definitely taken their toll on top-40, rock and AC during the last few years. WBUF, an AC/soft rock station slid to 12th place. Only a couple years back they were in the top 5. The other music stations have been hurt as well.

[Moderator's Note: You mean that people acually *prefer* a local origination talk format to a bunch of time shifted satellite talkers? Amazing! :-). Bill]

Enjoy.....

Scott

Bruce, the questions Will asked are vital in trying to understand why their government wants to prohibit the operation of `Bush Radio'. Did the Bush engineers randomly choose a frequency to operate on, possibly interfering with others? Will their hours of transmission coincide with another station on the same frequency? And the power lever certainly should have been included in the original posting.
If Bush Radio wants our sympathy and support they need to inform us of the entire issue at hand.

Dear Colleagues,

The International Federation Of Journalists sent the following message on behalf of our colleagues at Bush Radio in Cape Town:

Media Release MAY 4, 1993

IFJ Statement

Bush Radio: A Truly Democratic Media

The International Federation of Journalists, the largest organisation of journalists in the world, with more than 300,000 journalists from 70 countries, including two member unions in South Africa - MWASA and the SAUJ - strongly supports Bush Radio which is forced to broadcast illegally in the face of the South African governments refusal to open the airwaves.

The IFJ believes that Bush Radio is a truly democratic media, controlled by community leaders from the Cape Town Flats, which has not been given a chance to broadcast legally.

Bush Radio has been seeking a license for years and has been obstructed with its effort to create a community radio serving the densely populated Cape Town flats area.

The IFJ protests that Bush Radio, set up after four years of preparation and training, has been refused a licence to broadcast. The South African government only yesterday, three years after the democratisation process began in South Africa with the legalisation of the SA Communist Party and the ANC, relinquished control of the countries largest and most influential news outlet the SABC.

The IFJ deplores the fact that the South African government, instead of supporting grass root initiatives like Bush Radio, spends time an money trying to stop community radio.

Many communities in South Africa, after years of an apartheid government manipulating the country's information, mistrust the media and the news that it contains. Community radio, a media controlled by leaders of a community for the people of that community, where young journalists can be trained and where the local issues of the community can be discussed, is urgently needed.
PAGE 2 - IFJ STATEMENT: BUSH RADIO

The benefits are many: it restores faith in information; creates a civic forum; it offers an outlet for diverse views and opinions; it educates people about elections, politics and politicians; in short, it provides the greatest service that any democratic society could ask for: Freedom of

Expression.

The Federation extends its solidarity to all of the workers at Bush Radio and demands:

1) that the South African Government, opposition parties and President FW De Klerk relinquish the undemocratic control of the airwaves of South Africa and establish an INDEPENDENT regulatory authority which would license and support community radio and other forms of democratic media;

2) that the South African government works towards implementing laws, policies and internationally recognised standards designed to assist in the development of a free and pluralistic media.

The IFJ commends the work of the Campaign for Open Media (COM), representing the leading media organisations in South Africa, which has done an admirable job trying to democratise SABC and which could be called on to create an independent regulatory authority.

AIDAN WHITE
IFJ General Secretary Brussels May 4, 1993

I believe he wanted to know where it comes from. I think
Cool Gold is part of the Sattelite Music Network and it
originates in Dallas Tx. They also do Pure Gold, Z-Rock,SMN
Country and I think a few others. The jocks and some of the
commercial content is delivered by sattelite and the local
comms are inserted "usually" by some kind of automation
equipment. (I know Bill...You just LOVE it)..

Hope that clarifies it for ya.

There was a lot of interest in RDS at the recent NAB convention.
You are correct that it runs on an FM subcarrier (56 KHz). The National Radio Standards Committee is working on adapting the European standard to the US (or may have completed the standard by now). RDS pretty much just adds a data channel to FM broadcast. This capability has been there all along, but no standard has existed and there has been a very limited market for data broadcasting. This MAY change. I'm not so sure.
What you've seen is the format identifier in the RDS data stream. Other data can also be included. There is a proposal to use this data stream a part of the Emergency Broadcast System. At this point, I do not support that idea (as discussed in my article in the January issue of Radio World). If broadcasters are to participate in EBS, the data encoding scheme should work on all media, which pretty much means voice grade audio. Stations could then just rebroadcast the data burst followed by voice emergency information.
Another problem with the existing RDS is that it supports only FM. As I recall, the NRSC standard calls for receivers to use ID-Logic B to put up format identifiers on AM stations. This relies on a ROM in the receiver, which knows the format of every radio station in the country. This ROM could possibly be replaced with battery backed RAM or EEPROM and allow updates through the FM subcarrier.
Will data broadcasting work? It hasn't worked yet, to any large extent. If it does work, is an FM broadcast subcarrier the most efficient way to handle it? It seems to me that a more efficient way to handle it would be the existing paging systems. I believe this is more spectrum efficient and the hardware is already in place.
I mentioned EBS... As the FCC rewrites the rules on EBS, should

broadcasters be involved in EBS? The public does not have automatic unmuting receivers tuned to broadcast stations. If they have such receivers at all, they are generally tuned to a weather service transmitter. Should broadcast stations try to duplicate the ALERTING capability of the weather service radio system? Perhaps broadcast stations should only be required to have weather service radios so they know when they are broadcasting into an emergency. They could then inform their listeners.

Congress recently amended the Communications Act of 1934 so that broadcast stations will no longer be required to have a licensed operator on duty. The FCC will look into amending its rules late this year. This would allow stations to run unattended (which is not legal right now). It would seem that they would require unattended stations to automatically put emergency programming on the air. That programming could come from weather service radios, networks, etc.

Finally, one interesting application for RDS is called "Coupon Radio". I see it as just another gimick, but you never know! You hear an ad on the radio, a coupon pops out of your radio and you go use it int the store...

Harold

57KHz subcarrier.

|> Does anyone know if this system is running anywhere else in the
|> country?
Don't know about the US of A, but it's widespread all over Europe, mostly in car radios since it has the facility to switch a happy camper over from tape to radio for traffic announcements, and back again after the traffic update. Given the system here of national networks, RDS scores in cars for its ability to track a radio station from transmitter to transmitter on FM effortlessly en route.

However it might take off in the States for one aspect: commmercialization. A Dutch relay of the satellite station RTL displays "RTLPEPSI" on the mini-screen! Who could have dreamed of ads appearing on an 8-letter display?

## 668. WBZ (AM 1030) the greatest.

Newsgroup: rec.radio.broadcasting
Date: 1993-05-13 00:05:07 UTC
From: fbaker12@jade.tufts.edu
Message-ID: <1993May13.000507.20647@gagme.chi.il.us>
Source record: 43151

With all the talk about Boston Radio Stations closing and changing formats to tacky country music (i.e., WCDJ), which essentially NO intelligent person in Boston would EVER listen to, I'd like to commend WBZ AM 1030 for its excellent news radio. "News all day, talk all night" is the motto and it works. And when they're not reporting the news, they're talking about it, with serious news-oriented shows such as David Brudnoy and Lovell Dyett, and more lighthearted shows such as Norm Nathan and his "Dumb Birthday Game." The only problem I have with the station is the awful Bob Raleigh, who is supposed to have a lighthearted-type show like Norm Nathan and actually ends up spewing political humor Rush Limbaugh-style and turns his show into a soapbox for the Republican party and death-penalty advocates to feel free to call in and agree with him. The guy knows nothing and doesn't even have a college degree so what the heck is he doing talking politics? As if he knows anything? Besides, he's always wrong as well. Often he reports sports scores and lottery numbers completely wrong, saying that the Red Sox won when they lost and vice versa, as an example. I won't even write down what time his show is on since I don't want anyone to listen to it. Norm Nathan does the same job twice as well without getting into politics since he knows that politics aren't part of the agenda for his type of show. So please, especially those of you 18-22 years of age, try to discover the AM dial if you haven't and listen to the intelligent and informative WBZ AM-1030. It can be heard through 38 states at night and early morning so no excuse for people outside the Boston area to not tune in. Thanks.

-FB

Peru: Indigenous women's radio confronts crises
==========

Peru, a country located on the central-west coast of South America, has been facing severe economic crisis and a civil war that has claimed over 23,000 lives in 12 years.

Despite Peru's wealth of natural resources, it is facing a profound economic crisis which has sent the cost of living and unemployment rates soaring.

The 12 years of war between Peru's Armed Forces and the Shining Path and Tupac Amaru guerilla movements has also taken its toll. Women have paid a high price for the violence. A report released in January of this year by the Americas Watch and Women's Rights Watch, divisions of Human Rights Watch based in the USA, charge both the government of Peru and the Shining Path with the blatant and illegal use of violence against female non-combatants as a form of tactical warfare. The report documents more than 40 cases of rape of female non-combatants during interrogation by the Armed Forces or in the emergency zones, and many others that ocurred during security force sweeps or massacres. It also details the Shining Paths's assassinations of several women community leaders since 1985, and their routine use of such violence, or its threat, to terrorize women-led and feminist organizations.

Rosa Palomino Chahuares, an indigenous Aymara woman living in the city of Puno in the southern highlands, explains, "Peru has many difficulties, for example, at this moment, it's violence. As human beings, we want to live, we don't want the killings that we're witnessing. Women are affected in this sense; sometimes innocent children and innocent women pay with their lives. But at the same time, women are also suffering violence at the hands of their own families and husbands. Women are confronting this situation, and it has improved in our communities thanks to our radio programs, where women can come together to reflect and share."

Her radio program, Saultay Pauqara (the Aymara name for Saukara flower), is produced by the Illa Center for Education and Communication in Puno. It is broadcast on two popular radio stations, Radio Onda Azul in Puno, and Radio San Gabriel in Bolivia.

Rosa Palomino continues, "My program is aimed at indigenous peasant women, and so naturally it is done in Aymara. The situation for women in my region is that for many years now, they have not been valorized, they are not seen as human beings. Women are perceived as existing only to tend to their husbands."

## Indigenous communities and the crisis

Peru has one of the highest percentages of indigenous people on the American continent, together with Guatemala and Bolivia. The majority of them are from the Quechua and Aymara nations. Agripina Flores Lopez, a Quechua woman from the city of Cusco in the southern Andes, produces a radio program in Quechua called Warmikuna Rimanchis (Quechua for "Women Speak"). She explains, "My program is aimed at the urban-marginalized sectors of Cusco. It is done by women for the family, or by women for women. "It is directed at migrant indigenous peasants who have come to the city looking for income and work, and most of the time they encounter worse conditions here.

"Many communities in Cusco are suffering from drought. There's also the problem of the rising population. More and more people are arriving, and they need houses, so they are overtaking agricultural zones. Fields for planting practically don't exist anymore.

"The economic crisis is hitting the peasant regions the hardest, especially women. Indigenous peasant women in my region are heads of families for the most-part. The land produces so little, and men are forced to leave in search of money and work. Sometimes they don't return, or they may return with a disease. It becomes another burden for the family to bear."

## Problem solving

Agripina Flores continues, "Because of the crisis many organizations have broken down. But we are not going to organize for slices of bread. We will organize to solve our own problems; to see how women can confront this situation. We are suffering violence, and suffering so much discrimination."

Radio programs such as Sankay Pauquara and Warmikuna Rimanchis, combined with other grassroots activities such as consciousness-raising and training workshops for women have achieved concrete results in improving the lives of indigenous peasant women, first and foremost, by contributing to the valorization of women on a local level.

According to Rosa Palomino, "It's been five years since we started doing communication work. Before, many people treated us badly, or didn't appreciate our work in community meetings. Now they recognize us through our programs such as Sankay Panqara. Many women are now saying, 'we can organize together, because we

have our path: our program Sankay Panqara.' "

Listeners are encouraged to contribute to the program by doing interviews, commentaries, and sociodramas. Rosa explains that this "Allows for reflection when the programs are heard. For example, a man comes home drunk and fights with his wife, and hits his crying children. This is reproduced in the sociodramas, and it allows for reflection; the man can hear it and realize that he behaves the same way, and hopefully he'll correct himself."

"Also problems among women, for example, discrimination by urban women against rural women is acted out in the sociodramas."

"The themes are chosen by women, without ever forgetting our indigenous values. We value the knowledge of our grandparents who know about our ancestors and rituals; about how the land was worked without chemical fertilizers or pesticides.

"We are celebrating the resistance of 500 years. We are resistant, we are rooted like a plant; the leaves can be cut down, but not the root. They want us to disappear; they can destroy our wealth but they can't destroy everything. All these things serve for reflection."

Agripina Flores works in the communications area of the Amauta Center for the Study and Promotion of Women. The center deals with issues affecting women such as health and consumption, raising awareness about why foreign products like birth control and fertilizers are sold in Peru but are forbidden to be sold in the countries that produce them.

A team of three women produce Warmikuna Rimanchis. "We do it based on our personal experiences: domestic violence, discrimination, marginalization. This is a discussion that's been taking place through the program in Cusco; they discriminate against us because we are women, because we are indigenous, and because we are poor. We make our problems known and raise awareness through radio, without turning around and doing the same things to others," says Agripina Flores.

The program Warmikuna Rimanchis is broadcast on a commercial station in Cusco, and also on Radio Tierra, a women's station in Chile.

The radio programs have enabled indigenous peasant women in both Puno and Cusco to reach out to other local women and effect change. They've also helped women from both communities to come together through cultural exchange projects to share their experiences and knowledge.

Rosa Palomino concludes that radio programs such as hers and Agripina Flores' are "a support-system, a form of development. If

we don't include women, we aren't going to develop, because women
are the educators of their children and the heart of the family."

Just out of curiosity, what is WOWO-FM doing? They don't seem to be simulcasting with WOWO-AM anymore. Did they stick with oldies or switch to something else?

Scott

## 671. Yesterday USA: Old Time Radio via satellite

Newsgroup: rec.radio.broadcasting
Date: 1993-05-13 00:09:37 UTC
From: ae446@freenet.carleton.ca
Message-ID: <1993May13.000937.20877@gagme.chi.il.us>
Source record: 43152

I found the following message from Jim Mayor on the Broadcasting conference on RIME. You can reach Jim Mayor through the NETWORK East BBS, Rockville, Maryland at 301-738-0000.

(begin forwarded message)

Old Time Radio is available!

This is another request for assistance from all of you old time radio fans in the area. If you don't have a satellite dish you probably don't know of Yesterday USA. Yesterday USA is a super radio station, operating 24 hour a day, seven day a week, airing old time radio. Bill Bragg of the Dallas-based National Museum of Communications has brought together some of radio's best programs and most noteworthy collectors to join him in producing programming.

There are two ways to receive Yesterday USA:

1) Via your local cable TV company. Call your cable company and ask them to contact Bill Bragg [(214) 690-3636 or (214) 234-2223] for FREE permission to carry Yesterday USA on one of their unused channels; or

2) You can receive it yourself directly on virtually any satellite receiver. Tune your dish to F4, Transponder 15 or 21, Audio 6.2 and G3, Transponder 7, Audio 5.76.

Yesterday USA also has a newsletter called Airwaves, available for a nominal fee.

For additional information, write:

Yesterday USA Superstation
2001 Plymouth Rock
Richardson, TX 75081
(214) 690-3636.

For those in Montgomery County (MD): Cable TV Montgomery advised me that they "determined that it is a viable service and that many customers would enjoy it." They said they could not offer it at this time "since there has not been an overwhelming demand for it."

I'll try again. Write to

Ms Pam Stanford (Manager, Consumer Affairs)
Cable TV Montgomery

20 West Gude Dr.
Rockville, MD 20850-1150
(301) 294-7600

Let's see if we can be overwhelming this time.
(end forwarded message)

# 672. Boston RadioWaves (5-12-93)

Newsgroup: rec.radio.broadcasting
Date: 1993-05-16 20:02:33 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993May16.200233.23787@gagme.chi.il.us>
Source record: 43160

* Things are heating again up between the only two CHR stations in town. It looks like it's going to get ugly. Ardman's WZOU-94.5FM, which can't seem to get an edge on Pyramid's on CHR and 12+ leader WXKS-107.9FM, has somewhat changed its music direction and adopted a new slogan. WZOU is now known as "Jammin' 94.5"(instead of generic Z94.5) and is going after only 18-29 group(*I'm so happy to be included :-*) by playing CHR-flavored dance music(Snap,Bobby Brown,TLC,Snow,PM Dawn). Gone from its playlist such top40 pop chart-monsters as Phil Collins&Genesis,Gloria Estafan,Michael Bolton,Rod Stewart,Sting,etc).

I think it's a very smart move by WZOU. It should get a huge 18-34 following and eat into WXKS'(aka KISS-108) younger audience. Personally, I'm not a fan of any type of CHR format but it'll make it for an interesting FM radio battle which this town hasn't seen since Infinity(WBCN) killed its competetion(WZLX) in February by it. Also, 'ZOU-'XKS feud has been building up for a couple of years now since the day when 'XKS lured away 'ZOUs very creative PD Steve Rivers.

* Atlantic Radio can't seem to get their act in order. It made some big and not-so-big on-air changes effective this Monday(5/10) on its two big AM stations. A new big name will ring a bell to non-Boston listeners - Tom Leykis.

Here's a new week-day line-up for WRKO-680AM,
Boston's only 24-hour talk station(when the Red Sox are not playing):

6-10am Pat Wittley and Marj Claprood(they replcae Mike Cuthbert and Janet Jaghellian)
10-2pm Tomy Leykis(he replaces Boston Herald columnist Howie Carr and British import Victoria Jones,who moves to 8pm-11pm slot)
2-6pm Jerry Williams(the only untouchable)
6-8pm SportsTalk with Dick Lutsk(6-7pm if Red Sox are playing)
7:00-11pm Red Sox baseball_
8-11pm Victoria Jones(whenever the Sox are not playing; look for her to be a goner by Nov.1st; Atlantic management is keeping her around so that they wouldn't have to dish out a big unemployment payment right now. Since she's only going to be working 1 or 2 nights a week now because of the Sox games, her unemployment checks will be tiny when she finally gets the official ax. That should bring big smiles to the faces of Atlantic accountants; it's actually for the same reason WBCN management is still keeping Bradley Jay around for 1 weekend shift.)

11-2am syndicated Jim Bohanan show(Mutual Broadcasting System)
2a-5a repeat of Jim Bohanan's show

Here's WHDH-850AM "The Information Station" line-up :

5-10am "The Morning Edition" hosted by Eileen Prose(news/info show)
10-12pm "The Money Experts" - local call-in show on financial matterss.
12pm-3pm Rush Limbaugh
3-6pm "The Late Afternoon Edition" hosted by Janet Jaghellian(she was still an MIA as of yesterday(Tuesday); former WZLX jock Jeff Gonzer was still anchoring it yesterday afternoon).

6-8pm Gene Burns Show (syndicated on 3-hr tape-delay)

8pm-5am Various TalkNet programming hosted by such radio wizzards as Dr. Harvey Ruben,Bruce Williams,etc.

* Prediction : only 1 of the two new country stations in Boston will make it through this year. I put my money on Greater Media's new acquisition - WCSB 96.9FM.

-Mark

## 673. Howard Stern radio listing - monthly post

Newsgroup: rec.radio.broadcasting
Date: 1993-05-16 20:02:50 UTC
From: ckunz@src4src.linet.org
Message-ID: <1993May16.200250.23823@gagme.chi.il.us>
Source record: 43162

Hi folks, for some of you this is the last listing you'll see 'til you return to school in Sept (so, we better make this a good one :) We've got new affiliates coming (i.e. Miami, Atlanta, Detroit, Minneapolis) but none have sprouted at the time of this posting. As usual, new affiliates that pop up will be added to the list, changes made in between monthly postings will be posted to alt.fan.howard-stern.

And this just in... GARY DELL'ABATE (aka Baba Booey) HAS A PRODIGY ID. As far as I know, the ID I have is Dave Herman's. If anyone knows what Gary's ID is, please e-mail it to me. If Prodigy ever gets an internet gateway, then Gary will be getting junk mail from US! :) All right, enough babble, have a great summer, and here's the list...

Chuck
===
Welcome to the monthly Howard Stern Radio Network posting! These are radio stations currently carrying the show. Also included are some cities which may pick up Howard in the future. All times are local times. Thanks to everyone who has sent e-mail making corrections and/or additions, they are greatly appreciated! Please continue to do so!

Last update: 05-11-93

End times have been left open since we don't know when Howard will shut up :-)

To write Howard:
923 K-Rock
600 Madison Avenue
New York, NY 10022

FAX: 212-759-KFAX (5329)
Prodigy: KROK92A (this must be Dave Herman's ID... what is Gary's?)

Cities that don't have the show, but eventually a station will pick him up:

Phoeniz, AZ - very likely
Fresno, CA - not anytime soon
Denver, CO - how much longer?
Hartford, CT - been promising this one for months
Atlanta, GA - still waiting...
Detroit, MI - been promising this one for months, too
Pittsburgh, PA - how much longer?
Providence, RI - very likely
Houston, TX - very likely
Seattle, WA - how much longer?

# 674. UK Student Radio.

Newsgroup: rec.radio.broadcasting
Date: 1993-05-16 20:03:09 UTC
From: 09p2@biochemistry.oxford.ac.uk
Message-ID: <1993May16.200309.23846@gagme.chi.il.us>
Source record: 43161

Last year a friend and I looked into the possibility of starting a student radio in Oxford. After having discussed the matter with the local, and highly successful, FOX FM independant Radio station we arrived at the following agreement. FOX FM would let us use their spare studio, complete with equipment and handle all financial aspects - all we had to do was program the shows and get people onto the air. FOXFM even offered us free training - for those of us who were not already into hospital radio... As far as broadcasting was concerned... - well that was the problem.

We figured that if we used the side band to FOX FM normal frequency, we could supply freshman with radios that could receive it - also paid for by FOX FM - and not have to go through the complicated process of getting a new frequency (which would have been impossible under the present system). However, we were told that side band had been reserved in Britain for something. I'd like to know what!

It seems madness that Britain has no provision for Student Broadcasting (as far as I am aware that is). Is it any wonder that the radio (and TV for that matter) industry is so hard to get into? The only area for an introduction is Hospital radio and most are implementing age restrictions 18+ and arduous periods of training (not to mention the pathetic problems of pecking order in many groups).

Is there any change in sight? Have I got it all wrong?
Who can I turn to for help?

Geoff Bowers

```
The Ukraine's First Free Radio Station
==============================

Radio Altera, based at the University of Oujgorod in the Ukraine,
recently received a permanent license to broadcast, making it the
first and only free radio station in the Ukraine.

Its organizers hope that Radio Altera will not be alone for long.
In the meantime, Ukrainian radio and television remain the last
bastion of the old Soviet regime. The State still controls the
distribution of frequencies.

The idea for an independent, student radio station came about in
late 1991, after students from the university spent time at Radio
Zinzine in France. At the time, their aspirations ran head-on
into a wall of Soviet bureaucracy.

A year and a half later, and with the support of the European
Federation of Free Radios (FERL), Radio Altera found that it was
surprisingly easy to break through the State's monopoly on
audiovisual media. The station received permission to broadcast
for one week last October 1992, in conjunction with the
conference, "Media and Citizens in the Common European House,"
held in Oujgorod.

Radio Altera secured a permanent license to broadcast after the
meeting, thanks to the support of the President of the
University. The station is not simply a student station
broadcasting to the university community; it aims to be an open
forum for the city and its surrounding regions.

The Ukrainian media have traditionally played an educational
role. There is now a growing need for more pluralistic sources of
information. Radio Altera is helping to satisfy new demands by
bringing people together to exchange ideas and information.

>From an article written by Andre Zaiats of Radio Altera,

## 677. 1340 KHz Directional Blues, actually gospel

Newsgroup: rec.radio.broadcasting
Date: 1993-05-16 20:07:51 UTC
From: joel@cfctech.cfc.com
Message-ID: <1993May16.200751.24045@gagme.chi.il.us>
Source record: 43165

I have been the Chief Engineer of a 1340 1 KW directional day/
1 KW nondirectional night station here in Detroit for about 7
years now.

At this particular station, WEXL, this mostly consists of keeping
the transmitters alive, the array within bounds, and checking logs.
A very part time job.

I have heard of other 1340 type stations across the country going
nondirection full time, but when I have brought the question up
with our station management, they were always of the opinion
that since we protect a Canadian station in London, there
is some treaty involved, and they could not afford the Consulting
Engineer fees to figure it all out.

Does anyone have a clue as to how I could go about this myself?

The main reason for the query, is that the FM we rent the tower
from (5/8 wave at 1340..) is putting a new antenna on the mast
and will have to pay to have a proof performed after the change.
I am certain I could get them to use this money instead for
this effort, and save us all some grief..

joel

[Moderator's Note: Joel, my recollection is that MOST class 4 stations are
omni-directional, the logic seems to be that no matter where they oint the
signal, there will be another claSS 4 station a couple dozen miles away
anyhow. Also it is strange that you are DA by day and omni by night with no
power reductions. Bill]

## 680. Solar-powered radio in Africa

Newsgroup: rec.radio.broadcasting
Date: 1993-05-16 20:12:16 UTC
From: resystom@web.apc.org
Message-ID: <1993May16.201216.24228@gagme.chi.il.us>
Source record: 43168

Solar Radio Stations Installed in Africa
++++++++++++++++++++++++++++++++
Solar energy is a clean, efficient energy source that's easy to harness... where there's sun, of course.

Twelve solar-powered radio stations were recently installed in Africa: three in the Congo, four in the Central African Republic, and five in Burkina Faso. This local rural radio development program was funded by the Agence de Coopration Culturelle et Technique (Agency for Cultural and Technological Cooperation-ACCT, an inter-governmental organization of Francophone countries).

The solar power system is very simple, and involves few components: solar panels (about 25 square metres); batteries to store energy; a system for controlling the flow of energy, and if needed, a DC to AC (direct current to alternating current) energy converter, to supply energy to the equipment.
The batteries are large enough to store enough energy to furnish 32 hours worth of power to the stations in case there is no sun -- a rare occurrence in Africa.

The African stations operate using low-power transmitters (mono-FM, 100-150 watts), and high-performance antennae (2 to 4 decibels of gain). Studio and production equipment is rudimentary: two cassette tape decks, one reel-to-reel, a mixing board, a radio receiver, an in-studio amplification system, two portable tape recorders with rechargeable batteries, lights and fans. Total electricity consumption is 7,5 kilowatts/hour.

All the studio and solar equipment cost approximately 250 000 ff ($50,000 US) per station. Each station is capable of covering 30 to 50 kilometers, depending on the region's topography and the height of the antenna.

In Africa in particular, there is no obstruction of the airwaves caused by having many stations on the FM band, and there are few obstacles such as buildings, to interfere with their signals. Thus the range of each signal is much longer.
Maintenance is easy: the solar panels must be cleaned every day in sandy regions (due to wind and dust); and battery levels must be checked on a regular basis.

## 682. GE Superadio III - date codes- sensitivity problems

Newsgroup: rec.radio.broadcasting
Date: 1993-05-16 20:12:42 UTC
From: prmount@attmail.att.com
Message-ID: <1993May16.201242.24282@gagme.chi.il.us>
Source record: 43170

The 3/24/93 Radio World included an article where a spokesman for Thomson Consumer Electronics indicated that early models of the SR3 were shipped with "severe sensitivity problems."

The date code is a 4 digit number found on the box or in the battery compartment. ignore the first #; the 2nd indicates year of manufacture, the third and fourth digits indicate a week.

Anything with x201-x241 may have the sensitivity problem, according to this article.

Early usage reports confirm this problem. Also note that some users were able to improve sensititivy by swapping the polarity of some connector; this was covered in a previous posting by another DXer.

The article says nothing about a recall; it just suggests trying out the radio if a 241 or earlier date code before purchasing.

FYI Bennett Bros in Mahwah NJ has the SR3 in stock for about $40.

# 683. Boston RadioWaves (5-12-93)

Newsgroup: rec.radio.broadcasting
Date: 1993-05-16 22:51:38 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993May16.225138.25414@gagme.chi.il.us>
Source record: 43171

* Things are heating again up between the only two CHR stations in town. It looks like it's going to get ugly. Ardman's WZOU-94.5FM, which can't seem to get an edge on Pyramid's on CHR and 12+ leader WXKS-107.9FM, has somewhat changed its music direction and adopted a new slogan. WZOU is now known as "Jammin' 94.5"(instead of generic Z94.5) and is going after only 18-29 group(*I'm so happy to be included :-*) by playing CHR-flavored dance music(Snap,Bobby Brown,TLC,Snow,PM Dawn). Gone from its playlist such top40 pop chart-monsters as Phil Collins&Genesis,Gloria Estafan,Michael Bolton,Rod Stewart,Sting,etc).

I think it's a very smart move by WZOU. It should get a huge 18-34 following and eat into WXKS'(aka KISS-108) younger audience. Personally, I'm not a fan of any type of CHR format but it'll make it for an interesting FM radio battle which this town hasn't seen since Infinity(WBCN) killed its competetion(WZLX) in February by it. Also, 'ZOU-'XKS feud has been building up for a couple of years now since the day when 'XKS lured away 'ZOUs very creative PD Steve Rivers.

* Atlantic Radio can't seem to get their act in order. It made some big and not-so-big on-air changes effective this Monday(5/10) on its two big AM stations. A new big name will ring a bell to non-Boston listeners - Tom Leykis.

Here's a new week-day line-up for WRKO-680AM,
Boston's only 24-hour talk station(when the Red Sox are not playing):

6-10am Pat Wittley and Marj Claprood(they replcae Mike Cuthbert and Janet Jaghellian)
10-2pm Tomy Leykis(he replaces Boston Herald columnist Howie Carr and British import Victoria Jones,who moves to 8pm-11pm slot)
2-6pm Jerry Williams(the only untouchable)
6-8pm SportsTalk with Dick Lutsk(6-7pm if Red Sox are playing)
7:00-11pm Red Sox baseball_
8-11pm Victoria Jones(whenever the Sox are not playing; look for her to be a goner by Nov.1st; Atlantic management is keeping her around so that they wouldn't have to dish out a big unemployment payment right now. Since she's only going to be working 1 or 2 nights a week now because of the Sox games, her unemployment checks will be tiny when she finally gets the official ax. That should bring big smiles to the faces of Atlantic accountants; it's actually for the same reason WBCN management is still keeping Bradley Jay around for 1 weekend shift.)

11-2am syndicated Jim Bohanan show(Mutual Broadcasting System)
2a-5a repeat of Jim Bohanan's show

Here's WHDH-850AM "The Information Station" line-up :

5-10am "The Morning Edition" hosted by Eileen Prose(news/info show)
10-12pm "The Money Experts" - local call-in show on financial matterss.
12pm-3pm Rush Limbaugh
3-6pm "The Late Afternoon Edition" hosted by Janet Jaghellian(she was still an MIA as of yesterday(Tuesday); former WZLX jock Jeff Gonzer was still anchoring it yesterday afternoon).

6-8pm Gene Burns Show (syndicated on 3-hr tape-delay)

8pm-5am Various TalkNet programming hosted by such radio wizzards as Dr. Harvey Ruben,Bruce Williams,etc.

* Prediction : only 1 of the two new country stations in Boston will make it through this year. I put my money on Greater Media's new acquisition - WCSB 96.9FM.

-Mark

# 684. Howard Stern radio listing - monthly post

Newsgroup: rec.radio.broadcasting
Date: 1993-05-16 22:52:07 UTC
From: ckunz@src4src.linet.org
Message-ID: <1993May16.225207.25449@gagme.chi.il.us>
Source record: 43172

Hi folks, for some of you this is the last listing you'll see 'til you return to school in Sept (so, we better make this a good one :) We've got new affiliates coming (i.e. Miami, Atlanta, Detroit, Minneapolis) but none have sprouted at the time of this posting. As usual, new affiliates that pop up will be added to the list, changes made in between monthly postings will be posted to alt.fan.howard-stern.

And this just in... GARY DELL'ABATE (aka Baba Booey) HAS A PRODIGY ID. As far as I know, the ID I have is Dave Herman's. If anyone knows what Gary's ID is, please e-mail it to me. If Prodigy ever gets an internet gateway, then Gary will be getting junk mail from US! :) All right, enough babble, have a great summer, and here's the list...

Chuck

Fresno, CA - not anytime soon
Denver, CO - how much longer?
Hartford, CT - been promising this one for months
Atlanta, GA - still waiting...
Detroit, MI - been promising this one for months, too
Pittsburgh, PA - how much longer?
Providence, RI - very likely
Houston, TX - very likely
Seattle, WA - how much longer?

# 685. UK Student Radio.

Newsgroup: rec.radio.broadcasting
Date: 1993-05-16 22:52:17 UTC
From: 09p2@biochemistry.oxford.ac.uk
Message-ID: <1993May16.225217.25472@gagme.chi.il.us>
Source record: 43173

Last year a friend and I looked into the possibility of starting a student radio in Oxford. After having discussed the matter with the local, and highly successful, FOX FM independant Radio station we arrived at the following agreement. FOX FM would let us use their spare studio, complete with equipment and handle all financial aspects - all we had to do was program the shows and get people onto the air. FOXFM even offered us free training - for those of us who were not already into hospital radio... As far as broadcasting was concerned... - well that was the problem.

We figured that if we used the side band to FOX FM normal frequency, we could supply freshman with radios that could receive it - also paid for by FOX FM - and not have to go through the complicated process of getting a new frequency (which would have been impossible under the present system). However, we were told that side band had been reserved in Britain for something. I'd like to know what!

It seems madness that Britain has no provision for Student Broadcasting (as far as I am aware that is). Is it any wonder that the radio (and TV for that matter) industry is so hard to get into? The only area for an introduction is Hospital radio and most are implementing age restrictions 18+ and arduous periods of training (not to mention the pathetic problems of pecking order in many groups).

Is there any change in sight? Have I got it all wrong?
Who can I turn to for help?

Source record: 43174

```
The Ukraine's First Free Radio Station
==============================

Radio Altera, based at the University of Oujgorod in the Ukraine,
recently received a permanent license to broadcast, making it the
first and only free radio station in the Ukraine.

Its organizers hope that Radio Altera will not be alone for long.
In the meantime, Ukrainian radio and television remain the last
bastion of the old Soviet regime. The State still controls the
distribution of frequencies.

The idea for an independent, student radio station came about in
late 1991, after students from the university spent time at Radio
Zinzine in France. At the time, their aspirations ran head-on
into a wall of Soviet bureaucracy.

A year and a half later, and with the support of the European
Federation of Free Radios (FERL), Radio Altera found that it was
surprisingly easy to break through the State's monopoly on
audiovisual media. The station received permission to broadcast
for one week last October 1992, in conjunction with the
conference, "Media and Citizens in the Common European House,"
held in Oujgorod.

Radio Altera secured a permanent license to broadcast after the
meeting, thanks to the support of the President of the
University. The station is not simply a student station
broadcasting to the university community; it aims to be an open
forum for the city and its surrounding regions.

The Ukrainian media have traditionally played an educational
role. There is now a growing need for more pluralistic sources of
information. Radio Altera is helping to satisfy new demands by
bringing people together to exchange ideas and information.

>From an article written by Andre Zaiats of Radio Altera,

## 688. 1340 KHz Directional Blues, actually gospel

Newsgroup: rec.radio.broadcasting
Date: 1993-05-16 22:56:49 UTC
From: joel@cfctech.cfc.com
Message-ID: <1993May16.225649.25640@gagme.chi.il.us>
Source record: 43175

I have been the Chief Engineer of a 1340 1 KW directional day/
1 KW nondirectional night station here in Detroit for about 7
years now.

At this particular station, WEXL, this mostly consists of keeping
the transmitters alive, the array within bounds, and checking logs.
A very part time job.

I have heard of other 1340 type stations across the country going
nondirection full time, but when I have brought the question up
with our station management, they were always of the opinion
that since we protect a Canadian station in London, there
is some treaty involved, and they could not afford the Consulting
Engineer fees to figure it all out.

Does anyone have a clue as to how I could go about this myself?

The main reason for the query, is that the FM we rent the tower
from (5/8 wave at 1340..) is putting a new antenna on the mast
and will have to pay to have a proof performed after the change.
I am certain I could get them to use this money instead for
this effort, and save us all some grief..

joel

[Moderator's Note: Joel, my recollection is that MOST class 4 stations are
omni-directional, the logic seems to be that no matter where they oint the
signal, there will be another claSS 4 station a couple dozen miles away
anyhow. Also it is strange that you are DA by day and omni by night with no
power reductions. Bill]

## 691. Solar-powered radio in Africa

Newsgroup: rec.radio.broadcasting
Date: 1993-05-16 22:58:34 UTC
From: resystom@web.apc.org
Message-ID: <1993May16.225834.25789@gagme.chi.il.us>
Source record: 43180

Solar Radio Stations Installed in Africa
++++++++++++++++++++++++++++++++
Solar energy is a clean, efficient energy source that's easy to harness... where there's sun, of course.

Twelve solar-powered radio stations were recently installed in Africa: three in the Congo, four in the Central African Republic, and five in Burkina Faso. This local rural radio development program was funded by the Agence de Coopration Culturelle et Technique (Agency for Cultural and Technological Cooperation-ACCT, an inter-governmental organization of Francophone countries).

The solar power system is very simple, and involves few components: solar panels (about 25 square metres); batteries to store energy; a system for controlling the flow of energy, and if needed, a DC to AC (direct current to alternating current) energy converter, to supply energy to the equipment.
The batteries are large enough to store enough energy to furnish 32 hours worth of power to the stations in case there is no sun -- a rare occurrence in Africa.

The African stations operate using low-power transmitters (mono-FM, 100-150 watts), and high-performance antennae (2 to 4 decibels of gain). Studio and production equipment is rudimentary: two cassette tape decks, one reel-to-reel, a mixing board, a radio receiver, an in-studio amplification system, two portable tape recorders with rechargeable batteries, lights and fans. Total electricity consumption is 7,5 kilowatts/hour.

All the studio and solar equipment cost approximately 250 000 ff ($50,000 US) per station. Each station is capable of covering 30 to 50 kilometers, depending on the region's topography and the height of the antenna.

In Africa in particular, there is no obstruction of the airwaves caused by having many stations on the FM band, and there are few obstacles such as buildings, to interfere with their signals. Thus the range of each signal is much longer.
Maintenance is easy: the solar panels must be cleaned every day in sandy regions (due to wind and dust); and battery levels must be checked on a regular basis.

Message-ID: <1993May16.233100.26228@gagme.chi.il.us>
Source record: 43182

As some readers know, I am sending out an impromptu
digest from the alt.radio.pirate newsgroup to a handful
of addresses.

The digest is put out primarily as a service to those who do
not get 'alt' groups but who have an interest in pirate radio.

If you want to be on this list, send a note with the words
'add pirate' in the subject line... to wdp@gagme.chi.il.us.

Keep in mind that I will only do this as often and as long as it
is convenient for me. Also realize that the digest does not, at this
time, support posting articles. In short, if you want to sign up, you
must understand that you get whatever you get.

Take care.

Bill

## 695. Lessons from Radio Tonga

Newsgroup: rec.radio.broadcasting
Date: 1993-05-16 23:51:39 UTC
From: resystom@web.apc.org
Message-ID: <1993May16.235139.26539@gagme.chi.il.us>
Source record: 43183

Learning Valuable Lessons from Radio Tonga
++++++++++++++++++++++++++

The ancient Polynesian kingdom of Tonga comprises over 160 inhabited sub-tropical islands in a vast but mostly empty stretch of the South Pacific. Any traveller to this land is struck by the lonely beauty of the tiny islands and the placid way of life. Back in 1985 Radio Tonga was operating an elderly 10kW medium wave transmitter which could not effectively cover the country. A UNESCO project sought to supplement this medium wave service with three local FM stations for the major island groups.

Tongan technicians were trained to assemble small FM transmitters and several of these were installed. However even with high power it turned out that the population was so thinly spread over so many islands that only a small proportion could be served.

The next step was to provide a 1kW short wave transmitter to help cover the outlying islands. Another low-cost UNESCO transmitter design was used, and it worked well; almost too well! Within a few weeks reception reports were coming in from as far away as Canada. The World Service of Radio Tonga was on the air.

The FM transmitters assembled by Radio Tonga technicians functioned well for over five years_quite an achievement considering that they had never built anything like this before. But by the time the equipment needed maintenance the staff who had originally been trained had all emigrated.

Sadly, this is a familiar story, and one which raises disturbing questions about the whole philosophy of technology transfer. With a limited budget, the aim of the Unesco community radio projects has always been to sow the seeds of self-sufficiency, not to provide simple aid. In almost every case the training has been a success, but there is no way of keeping the trained staff where they are needed. To say that these people should stay and help their own country is an expression of northern hypocrisy. Should we therefore forget about the training and just dispense as much equipment as we can?

The experience of Radio Tonga showed that "packaged" solutions are unlikely to work in countries with such unusual topography, and the details of a broadcasting plan have to be worked out on site. It showed that retaining skills in the country can be more difficult than providing training. In this situation technology transfer has to be a continuous process.

The positive side is that we introduced both FM and short wave broadcasting to Tonga, and they were both immensely popular. They expanded the horizons of radio in that country to cover all of the islands and far beyond. The short wave service enable people on the most remote islands to receive national programs for the first time. It provided a better service than the old medium wave station and was set up at a very low cost. Meanwhile, the FM service gave an alternative high quality channel which was greatly appreciated.

Radio Tonga is now a much more dynamic and modern station.

Martin Allard,

Does anyone have a list of sites/frequencies they could post to the
net ? Presumably one can get such a hardcopy list from the Radio
Authority if you ask ?

(BTW, I have a fairly up-to-date on-line listing of all the UK
National FM broadcast transmitters/frequencies that I can make available
to anyone who is interested.)

Women's Stories: an alternative form of survival
==========

Voces Nuestras (Our Voices), located in San Jose, Costa Rica, is an educational center dedicated to radio production, training and research.

In terms of training, Voces Nuestras furnishes popular groups representing workers, peasants and women with the expertise needed to disseminate their messages via radio.

Voces Nuestras goes beyond simply providing technical training, to integrate concepts aimed at eliminating all forms of oppression based on class, culture, age, race and above all, gender, into the learning process.

Every project undertaken by Voces Nuestras involves a gender perspective, in an effort to participate in the development of a society where equality, freedom and solidarity prevail. The center offers training and produces programs that aim to provide women with the skills they need to undertake initiatives aimed at improving their own lives.

A radio series recently produced by the center is one such example. Historias de Mujeres ("Women's Stories") is a series of twelve, 15 minute programs which look at women's popular economy cooperatives.

Women's cooperatives offer an alternative to the traditional job market, especially as a solution to the discrimination women often face at work. Historias de Mujeres serves to inform and guide women or women's groups that wish to participate in or establish collectively-administered small businesses. The series also explores the difficulties faced by women-run collectives at each stage in the development of their small businesses.
Each program explores a different theme by presenting the experience lived by a particular group, using a radio drama format. They cover the social and administrative, as well as family problems that can surface at each stage of creating a production group.

One program discusses the social prejudices women confront once they decide to unite to form a collective; another examines the organizational difficulties that arise when due to a lack of expertise.

In addition to analyzing problems intrinsic to production groups, Historias de Mujeres also looks at the transformations in the personal and family lives of the women involved in production groups.

## 698. WBZ History Program to Air June 8

Newsgroup: rec.radio.broadcasting
Date: 1993-05-16 23:53:19 UTC
From: fybush@world.std.com
Message-ID: <1993May16.235319.26633@gagme.chi.il.us>
Source record: 43186

I've been hinting about this, but now it can be told:

Tuesday night, June 8, from 10 pm to midnight Eastern time,
WBZ (1030) will be broadcasting a special edition of the "David
Brudnoy Program." The topic (in honor of WBZ-TV's 45th birthday
the next day) will be the history of WBZ. The exact lineup
of guests is yet to be determined (that's my job :-), but it
will include several of WBZ's veteran personalities...and me.

So...if you can hear WBZ where you are (and now I know more than
I ever wanted to about THAT subject ;-)...I invite you to
tune in.

I'll post more info about this program as the exact lineup
is determined.

Scott Fybush -- fybush@world.std.com

>
>

I'm in the market, and if they're doing anything besides simulcasting, it's when I'm not aware of it. I'm told that the FM subcarrier is being used to send signals to their billboards that indicate what's on the air currently.

In article <1993May13.000937.20877@gagme.chi.il.us> ae446@freenet.carleton.ca (Nigel Allen) writes:

(from a forwarded message from the RIME network)

>probably don't know of Yesterday USA. Yesterday USA is a super
>radio station, operating 24 hour a day, seven day a week, airing
>old time radio. Bill Bragg of the Dallas-based National Museum
...
>There are two ways to receive Yesterday USA:
...
> 2) You can receive it yourself directly on virtually any
> satellite receiver. Tune your dish to F4, Transponder 15 or
> 21, Audio 6.2 and G3, Transponder 7, Audio 5.76.

Due to some rather recent satellite service movements and retiring of F4, all these co-ordinates are wrong.

Current ones:
Galaxy 3/17 at 6.2 Mhz
Spacenet 3/5 at 6.8 MHz
Galaxy 6/14 at 5.76 Mhz

I do agree Y-USA is a very neat service if you want to know what radio programs were on or were like years ago.

# 701. Special Broadcast on Bosnia

Newsgroup: rec.radio.broadcasting
Date: 1993-05-19 01:25:56 UTC
From: cee@wshb.csms.com
Message-ID: <1993May19.012556.29532@gagme.chi.il.us>
Source record: 43189
Cross-posted to: rec.radio.broadcasting,rec.radio.info

PRESS RELEASE

WORLD NEWS SPECIAL ON BOSNIA FROM MONITOR RADIO

BOSTON, MA: Monitor Radio will produce a "live" two-hour World News Special on the conflict in Bosnia on Saturday, June 5, at 1600 UTC. It will transmitted live to most of the world on the Montors three shortwave stations, and also on most American Public Radio affiliate stations.

This will be an unprecedented collaboration between several prominent radio producers: Monitor Radio, Marketplace, BBC World Service, Deutsche Welle, and the Canadian Broadcasting Corporation, as well as several noted independent producers.

The program is comprised of live and pre-recorded reports from various locations around the world, live round-table discussions with leading politicians, humanitarians, military and media experts, call-outs, and debate among serious-minded partisans on the appropriateness of military intervention and of other options. The objective is to present voices that will offer listeners some understanding of this difficult conflict by exploring the history, culture, and contemporary strategies for the region.

Shortwave frequencies on which this special program may be heard are:

June 5, 1993 Station Frequency Region

1600 UTC WCSN 17510 kHz Europe/Africa
1600 UTC WSHB 13710 kHz North Am/Caribbean
1600 UTC WSHB 17555 kHz North Am/Mexico
1600 UTC KHBI 11580 kHz Asia/Japan
1600 UTC KHBI 9355 kHz Africa/So. E. Asia

Monitor Radio is a broadcast service of The Christian Science Monitor, transmitted daily on shortwave to an estimated 190 countries world-wide, and is also distributed to nearly 200 American Public Radio stations throughout the United States.

## 702. Introduction to rec.radio.boadcasting (NEW)

Newsgroup: rec.radio.broadcasting
Date: 1993-05-19 01:51:11 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <1993May19.015111.29653@gagme.chi.il.us>
Source record: 43190
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Greetings:

Rec.radio.broadcasting (r.r.b) is a Usenet newsgroup which
was founded in April of 1992, in order to provide a forum for
discussion of topics pertaining to 'domestic broadcast radio'.
Already in existance was rec.radio.shortwave, which centers around the
International radio scene, and rec.radio.noncom who's focus is,
obviously, non-commercial radio. Rec.radio.broadcasting was intended
to 'fill the gap' between these groups.

The Internet Radio Journal is a periodic email digest consisting,
mainly, of articles found in the newsgroup. It is intended for people
who either cannot access the newsgroup from their system or for some
reason perfer a digestified format for reading. Subscriptions to IRJ
are free, and available to anyone who wants one, and who is equiped
with some form of email service.

-=*=- DOMESTIC BROADCAST RADIO -=*=-

By domestic, we mean broadcasts which are intended, primarily,for
reception in the same country/nation in which they originate. R.r.b
is an international newsgroup, though, and the term 'domestic' should
not be taken to imply 'USA' or even North American. Readers in other
nations are encouraged to participate.

-=*=- SUBJECTS -=*=-

If it has to do with broadcast radio, and not _specifically_ international
shortwave, it is welcome here. Occasionally an article which IS
primarily about shortwave will be posted if the subject seems broad
enough that the readership of r.r.b might be interested, or be able
to assist the poster in some way.

Generally, if a subject 'seems' like it would be of interest to the
broadcasting community (which includes those involved in creating,
transmitting or listening to broadcast radio) will be published.
These subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters and interests.
3) DXing (long distance reception) on the standard broadcast bands
4) Community broadcasting (including non-commercial and clandestine stations).
5) Pirate broadcasting (especially non-shortwave, domestic pirates).
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.

9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.
13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

-=*=- POSTING -=*=-

1) Post to rrb as you would any other Usenet group. The software does the rest.

2) Email your article directly to rrb@airwaves.chi.il.us. Using other addresses to post will needlessly delay your article. You might consider installing an alias in your mailer for emailed articles, especially if you post a lot of stuff. See the end of this file for all applicable addresses.

-=*=- POSTING GUIDELINES -=*=-

* If you post a question that is of potential interest to others in the group, ask that replies be posted, instead of emailed to you. We all would like access to the answers.
If you do receive email replies, post a summary to the group. This forum is only as good as it's posters and readers. Keep the info flowing.

* If you email an answer to a question, send a Cc: to the group's submission address, rrb@airwaves.chi.il.us, so we can all learn from your knowledge. When id doubt... POST POST POST! :-).

* PLEASE edit quoted text to a minimum! Most users of this group are fairly regular readers and do not need, or want, to read the entire text of a recent article in every reply. Of course, if the thread is less current, more quoted text may be appropriate. Use your brains (and your editor :->).

* If your message is basically a one or two line "Me Too" or "I disagree" post, consider emailing it to the poster. However if you go into some details as to WHY you agree or disagree, then please post it.

* If you are replying to an article in the Internet Radio Journal, simply use your mailer's reply feature, and again, edit the text to ONLY the article you are replying to, and include the article's name in the Subject field. Subjects of "Re: Internet Radio Journal" are confusing and may result in needless delays.

* If you post about a local radio station or personality, realize that 95% or more of the readers will know little or nothing about it. Offer a little background, like location, station format, type of

music played etc.

* Last but not least, avoid flames and personal insults. R.r.b has a high percentage of broadcast professionals among it's readers. We try to maintain a reasonably high brain to bulls*it ratio here. It is perfectly fine to say "I think that what you said is the stupidest bunch of crap I have ever heard", instead of "YOU are the stupidest jerk I have ever heard". If you *must* make personal attacks, do it in email.

-=*=- MODERATION -=*=-

R.r.b is a _very_ loosely moderated group. Normally, all legitimate articles will be posted to the group. Matters that may cause an article to be rejected by the moderator include...

---

* Articles which are not on (or reasonably near) the stated charter and scope of the group (domestic radio broadcasting) or pertain to 'non-broadcast' radio services, such as cellular, two-way, ham, citzens-band, and such.

* Articles that are too long for submission as-is. If your article is longer than 10k (10,000 bytes), consider splitting it into two parts, or better yet, edit it down to a more reasonable size. Check to see if you can eliminate any quoted text. If you believe that your article is of an especially urgent or inforamative nature, and you also feel that you cannot reduce the size without damaging the content, let me know and I will try to work with you.

* Articles which are merely multiple repetitions of an identical answer which has already been offered several times. Often these will be bundled together into a single article to conserve bandwidth and increase readability.

* Articles which contain 'miles' of quoted and multiple quoted text followed by a few lines or less of original text. Please edit quoted text to a minimum and try to adhere to the *50% rule*, that is 51 (or more) percent of original text to 49 (or less) of quoted text. If the thread is not curent, more quoted text is appropriate. Only the worst offenders are omited, usually I will edit quoted text myself, when I have time.

* Articles which are unwarrantedly offensive, abusive or contentious for the sake of contention. Personal attacks and ridicule are considered such. Discussion, even argument, of issues and opinions are welcomed and encouraged. Flame-wars and such are not. We have discussions here, not shouting matches.

Note: Since most articles are used, we do not send out confirmations. If your article *is* rejected, you WILL receive a note explaining why the action was taken. If you do not receive such a note, and you do not see your article in the group, notify the moderator at once and include a backup copy if you have one.

-=*=- ARCHIVES -=*=-

Archives of past Internet Radio Journals are kept for anonymous FTP at
deja-vu.aiss.uiuc.edu . They can be found in the directory
/misc/rec.radio.b-cast. In that directory you will find a file called
INDEX, which contains the issue numbers of all Journals, and the
title of each article contained within. The archives are updated
every week or so. If you need help with FTP, write me.

The Journals are arranged in sub-directories of about 100 issues each,
and are in compressed (.Z) format. Remember that compressed files
should always be sent using the "binary" mode. If you have trouble accessing
anything, or if you have any questions about the archives, send email
to rrb@deja-vu.aiss.uiuc.edu. If you appreciate the archives, send
your notes of appreciation to the site admin, C. Lance Moxley
<lance@deja-vu.aiss.uiuc.edu>. He has been very gracious in his
willingness to store our archives on his machine.
* Please do not bother the system admin with problems, direct those to me. *

-=*=- ENJOY THE GROUP! -=*=-

I hope you enjoy the group. Remember, it is only as good as it's
contributors. So don't be shy :-). If you have a question, or answer,
even if you are not sure, post - post - post.

I am open to suggestions on how to improve this group. Send them via e-mail
to wdp@airwaves.chi.il.us -or- rrb@deja-vu.aiss.uiuc.edu.

Thanks to all who have, and continue to, participate.

We now return you to your regularly scheduled newsgroup :-).

## 703. Re: Boston's Smooth Jazz station is history

Newsgroup: rec.radio.broadcasting
Date: 1993-05-20 02:51:04 UTC
From: markson@rapnet.sanders.lockheed.com
Message-ID: <1993May20.025104.20418@gagme.chi.il.us>
Source record: 43194

> sister-station WMJX-106.7FM. Did anyone in the Boston area actually
> catch the changeover?

It happened Monday May 3rd. I last heard WCDJ smooth jazz about 8AM and two guys kept playing the WCDJ jingles and talking about WCDJ. I did not realize that that was the last broadcast, but looking back on it I wish I taped it. At about 6PM I was leaving work and was surprized that there were soft rock tunes playing. When they announced WMJX 106.7 I couldn't remember why I would have had that station on! I felt very depressed because I realized what had happened. I had heard WCDJ was having financial problems on the broadcasting/shortwave program SIGNALS a few months ago on Shortwave station WWCR (which burned down about 5 weeks ago and just came back on the air with one transmitter). WMJX was simulcasted until sometime Wed. May 5th I believe. When I came out of work, guess what? The new Country 96.9 WBCS. I have to give Greater Media credit - the changeover happened very quickly.

>* Both Boston dailies reported this morning that Greater Media is
> planning to drop "Smooth Jazz" format at its soon-to-be acquired
> WCDJ-96.9FM. WCDJ-96.9FM has been with this format for the past 2 and
> a half years. Eventhough, it was never a success story in the rating
> books, it had a very loyal following among very desirable 25-54 year-olds.

I am one of those "loyal" followers of WCDJ contemporary jazz and it was sad when I went in to work with smooth jazz and after work heard WMJX. It was amazing that the country format started two days later - I thought that the simulcast would take until July too. I am not a country music fan so it didn't bother me too much that Boston had no country stations. In fact WOKQ in Concord, NH was the only country station in the area (I am in Southern NH). On trips to Salt Lake City and Dallas/Ft. Worth recently, both has smooth jazz stations. I sure hope Boston sees the light and starts one up. After all there must be 10 soft rock stations in Boston, whats one less. I couldn't believe how upset I was at the change, but I am hoping to hear smooth jazz again!

[Moderator's Note: We have a NAC "smooth jazz" station here in Chicago (WNUA-95.5) which does a good job. However, they *OVERDO* the use of the word 'smooth' to the point that it becomes like water torture. They have smmot-sets, smooth ride home, smooth concert series, etc etc ad-infinitum, ad-nauseum. I mean it is really hard to listen to. Sad too, because they play some nice music, Bill]

Sounds like a good deal. Student stations are more often funded by grants
from Student Unions and other sources.

> As far as broadcasting was concerned... - well that was the problem.
>

Typically can be used to data transmission/distribution (financial
information services, paging etc), and I think the Radio Authority are
reserving the right to offer it as a seperate franchise from that of the
radio station operator.

> It seems madness that Britain has no provision for Student Broadcasting (as
> far as I am aware that is).

> ...
> Is there any change in sight? Have I got it all wrong?

Student stations have been around in the uk since the late sixties. They are
licenced to broadcast on AM only, and using an (expensive) induction loop
aerial system - which typically will not reach beyond the bounds of the
campus. There are quite a number in existence. Also, in recent years,
stations have been able to apply for a 'special event licence' enabling them
to broadcast on FM for a limited amount of time (I think the maximum is three
months). They are quite pricey, but stations find that they recoup this cost
with advertising revenue.

Student stations have been trying to get FM frequencies on a permanent basis for a very long time. They have had no success as yet, but they are still trying.

There is a body called the National Association of Student Broadcasters (NASB) who will possibly be able to help you. I don't have the address handy, but I can get it if you want (mail me direct).

> Who can I turn to for help?

It is madness, and worse yet is the fact that the British exported their top-down system to their former colonies, which are only now getting over it in Africa and the Caribbean. It will be a long time before the ex-colonies of Asia get rid of the structures they inherited from Britain.

That said, Britain has changed quite a bit in the past few years and as you know there is now independent radio and even community radio.

In many parts of Europe and North America community radio and student radio have built valuable alliances and one place to direct your questions is the Community Radio Association. The address is:

Not on a top 40/dance music station (at least the ones I heard in the
short time I was in the US)!! For the past few years, the
ratio of male/female hit songs (from what I've heard) has been around even,
if not slightly in favour of women.

Has this changed recently?

>Cool Gold is part of the Sattelite Music Network and it

(some deleted)
Actually, although Kool Gold is distributed by SMN, it originates in
Phoenix, Ariz. (at - I believe - KOOL-AM). It existed as a local station
for several years before being syndicated by SMN.

The sum total of KLAU, by the way, is a single PC computer running a
hardware/software package called Audisk that inserts all of the spots
and "local" talk. It sits in a corner of KMBY-FM's studio. Then it gets
fed to the world's cool-est looking AM tower array: 4 flagpoles arranged
on a golf course along Hwy. 1 in Aptos, Ca.

>equipment as we can?
>
> Interesting article! I agree that the trained technicians should have freedom to travel, but it seems that while they remained in the country for a few years, they could have been providing training for others. It seems fairly common to have a fairly highly trained supervisor with a few lesser trained workers, who are continually learning from the supervisor. When the supervisor leaves, one of the other workers is ready to take over.

Hi Geoff,
I was a little shocked by your append - surely someone at FOX, let
alone the Radio Authority, knows about student radio - there are about
30 student radio stations in the UK who have been broadcasting for over
20 years - on medium wave.
To start with, the idea of using sidebands (a la the US) is a non-
starter in the UK, since these SCAs are used for RDS, the Radio Data
System, which virtually all UK stations have broadcast with their FM
signal for many years. Even if you could use an SCA, the bandwidth is
appalling.
Another option you may wish to consider is RSL - Restricted Service
Licences. These allow you to broadcast for 28 days with 25watts of AM or
FM power. They are issued on demand by the Radio Authority, but they
do tend to cost a lot - RA fees, plus PRS and PPL can add up to 3500 for
a months broadcasting, but this hasn't stopped some student stations
for applying for these, for Freshers Week or Rag Week for example. For
more info phone the development officer of the Radio Authority on
071 430 2724 - they have a pack telling you how to apply; it really
is as simple as that, you fill in the form, you get the licence.
I've done a couple of these RSLs, and they really are great fun, but

they have do have this major limitation of only being for a short time. It confuses the listeners like hell, as well as being a real training problem, if you are only on air for a short time, then die before coming back half a year later. The best option is to set up a true student radio station yourself.

These broadcast via medium-wave induction loops, with one or more loops per hall, college etc. Perhaps you'd better contact CUR, Cambridge University Radio, to see how they have arranged their system, as I'm sure they are in a similar position to you, having a number of colleges spread around the town, however the idea is that from a central studio you feed via landlines a transmitter at each college, and these TXs have a network of coax stretching over the college, with various loops at convenient locations, so the signal spreads over the campus but as the quaint 'Licence for Wireless Telegraphy' puts it, the signal 'Does not go substantially beyond the curtilage of the university'. If this sounds a pain install and maintain, well yes it is, but it has the advantage of being dirt cheap, (when I was Station Manager of Uni Radio Essex the licence was about 100 a year, same again for copywrite fees) and free from virtually all restrictions. You can say and do what you like, with the result that its always amazingly popular with the jocks, who can get on air with minimal training, and in most stations, play whatever music they like. If FOX were prepared to give you some money to give SCA radios to Freshers, perhaps they would be prepared to buy you a MX IL network instead!

Just as the output of most stations tends to be diverse, so do the stations - no two are alike, and all have very different philosophies, varying from the 'Party in the Studio' guys to the 'You'll play what I say and like it' elsewhere. Try and sample a lot of these different stations before deciding what your own philosophy is; if the truth be known, the ones that are the most popular do seem to be the ones that opt for a fairly safe middle ground of only necessary controls. This also prevents the pecking order problem you seem to have come across in hosy radio!

The future for UK student radio has always been seen as FM Freely Radiating, but it has been requested for over a decade now, and the RA have stated that they will not consider FM as opposed to AM for student (and come to that, hosy) radio, despite the major campaign recently carried out by NARBO, the Hosy radio umbrella body.

There is an umbrella body in the UK for student radio, the SRA, who hold a conference once a term, and who also have their own E-Mail newsgroup. Oddly, they already have an Email contact for Oxford, Edmund Wilson, who seems to have set up a student radio group, but he seems mainly interested in RSLs.

Incidentally, the problem of Radio and TV being hard to get into isn't because there are no training grounds other than Hosy radio, but because there are hundreds of highly trained grads from campus radio who try and get the very few jobs. At one ILR I came across, every single person was an ex-campus radio jock.

Hope this is of use!
Julian Lorkin.

Funny you should mention this, years before I started at the station, they WERE 1 KW DA daytime, 250 W ND nightime. At this time they could still afford a consulting engineer, who had the liscense amended for 1KW ND nightime, and hinted that they would be able to go nondirectional daytime as soon as this illusive treaty was worked out.

## 711. Radio Scotland axes NightTime Shows

Newsgroup: rec.radio.broadcasting
Date: 1993-05-20 03:57:38 UTC
From: Richard Cooper <rich@dcs.glasgow.ac.uk>
Message-ID: <1993May20.035738.21688@gagme.chi.il.us>
Source record: 43197

As you may have noticed, Radio Scotland in its wisdom has decided
to axe all the night time programmes - including the Scottish Chart,
EarShot, Bite The Wax and the Beat Patrol.

They have replaced these with a tacky arts program and a repeat of
a daytime program. This seems to me like replacing one of Scotland's
strongest cultural institutions with idle chatter about the arts.

I would have thought that it was self evident that the strong position
of Scottish groups and singers over the last fifteen years has been
due in no small measure to the pivotal role played by Radio Scotland
in encouraging and promoting new Scottish talent.

If you feel as I do that this is a very retrograde step for Scotland,
you might wish to let the BBC know how you feel. You could write an
irate letter and send to "someone in the BBC". However, I have been
told that a better target for your letter would be the Scottish
equivalent of the BBC Board of Governors, thus:

Professor Sir Graham Hills
Chairman of the Broadcasting Council for Scotland
BBC Scotland
Queen Margaret Drive
Glasgow G12 8DG

It died in mid February. I engineered it on our station (WFRD-FM
Hanover, NH) They made no mention of it being the last show or
anything. Our PD just got a call about 2 weeks before the last show.

AM/FM DXing

By Scott Fybush
Modified By Earl Higgins

One of the easiest parts of the radio spectrum to explore are the broadcast bands. This posting will attempt to offer some hints to make your exploration of the mediumwave and VHF-FM bands more enjoyable.

I. WHAT ARE THE AM/FM BROADCAST BANDS?

The mediumwave (commonly referred to as AM) broadcast band currently extends from 525 to 1605 kilohertz. Channels are spaced in even 10 kHz increments; i.e.: 530, 540, 550, ... , 1600 kHz in the United States and Canada. Elsewhere, channels are spaced in 9 kHz increments, i.e.: 531, 540, 549, etc.

In the United States, the band is being expanded to 1705 kHz. Stations which are currently experiencing high levels of interference will begin appearing on the 1610-1700 kHz frequencies sometime in 1993. They will simulcast the new frequencies with the old for a period of a few years, eventually dropping the `old' frequency. This opening up of new channels presents some once-in a lifetime opportunities for the alert mediumwave DXer.

The VHF-FM broadcast band in the United States extends from 88 to 108 megahertz. Channels are assigned at 200 kHz increments; i.e.: 88.1, 88.3, 88.5, ... , 107.9. The channels from 88.1 to 91.9 are reserved for noncommercial educational stations. Outside the United States and Canada, the boundaries and channel spacing vary. In Japan, the band starts at 76 MHz. In Western Europe, the band generally runs from 88-108 MHz, but channels can be irregularly spaced, i.e.: 101.25 MHz.

II. SIGNAL PROPAGATION

The distant stations you are able to receive will depend largely upon signal propagation. This varies depending upon the time of day, the season, and other factors. For mediumwave, the single most important factor for good DX is the time of day. Mediumwave signals almost always get absorbed by the D Layer of the ionosphere during daylight hours. As a result, all mediumwave signals received during midday hours will arrive by ground wave, making reception of signals over a few hundred km/miles away unusual in daylight. At night, however, the ionosphere reflects mediumwave signals, making it possible for signals to be heard at much greater distances, up to a few thousand km/miles, via `skywave'. To a lesser extent, the period up to two hours after local sunrise, and two hours before local sunset, called "Critical Hours", have varying

levels of skywave, and also can provide some very unusual reception opportunities for the mediumwave DXer. Reception also tends to be better in winter than in summer, due to lower levels of atmospheric noise and longer hours of darkness. In the United States, due to the large number of stations, many smaller mediumwave stations are required to sign off or reduce power sharply at sunset so as to reduce interference to distant stations.

Whereas the mediumwave band can be counted on to provide distant reception with much dependability, this is not the case at all on the VHF-FM band. Under `normal' conditions, VHF-FM signals generally carry no more than 150-250 km (100-150 miles), or `line of sight', since the ionosphere generally does not reflect VHF-FM signals. VHF-FM transmitting antennas are thus usually located as high as possible. Tall towers, high buildings, and mountaintops are common VHF-FM transmitter sites.

However, under certain rare conditions, the atmosphere will even reflect VHF-FM signals, thus making it possible to receive these stations at quite long distances. There are two major forms this distant reception can take; the most common is Tropospheric Ducting, or tropo for short. Typically, this occurs when a warm air mass forms on top of a cooler mass closer to the ground. The area between these masses acts like a pipe, `bending' the signals back to the earth well beyond the horizon. This reception is most common in local late spring and summer months, in the post-sunrise hours. It will enable the alert VHF-FM DXer to log stations up to 800 km (500 miles) away in optimum conditions.

The other relatively widespread form of VHF-FM DX is called Sporadic E, or E-skip, because it is the E Layer of the ionosphere which reflects the signals. Like the name implies, this form of propogation is very sporadic, yet very intense. When it's in, it is VERY strong. Stations from a relatively limited geographic area 1300-2000 km (800 to 1200 miles) away will suddenly boom in, strong, often in stereo but quite fadey, even overpowering semilocals in many cases. It will start at the bottom of the VHF-FM Band (actually TV channels 2-6 first) and work its way up in frequency. The highest frequency at which signals are reflected by the ionosphere is called the Maximum Usable Freqiuency (MUF), just as it is in shortwave, and it can occassionally surpass the top of the VHF-FM dial in an unusually good opening.

III. RECEIVERS

Almost any radio is capable of some broadcast-band DXing, especially long-distance mediumwave reception. However, most recent radios, even those designed for quality shortwave reception, do not have outstanding broadcast band reception. One exception is the General Electric Superadio III (Model 7-2887.) The SR III is designed for optimum AM/FM broadcast performance, incorporating:

* RF amplifiers on both bands
* Ceramic filters and Automatic Frequency Control on FM

* No PLLs or digital displays for less electronic noise
* A 2-way speaker system with 1 watt of audio power

The SR III is a bulky (4" x 10" x 12") portable radio which can be run off 120V AC or 6 "D" batteries, providing over 400 hours of battery life. This radio has become popular among the DX community for its exceptional performance.

It costs between thirty and sixty dollars in the US, and may be found at many discount outlets. It can be obtained from Bennett Brothers (Order #R8883) at 1-800-621-2626 or 1-800-631-3838, or from Best Products (Order # 140457) at 1-800-950-2398.

If you don't have a Superadio, some important things to seek out in a receiver are:

* External antenna connections. These make it easier to use a better antenna than the one supplied with the radio.

* High selectivity. This refers to the receiver's ability to reject strong signals on adjacent frequencies, and is more important to good reception than is sensitivity, since a good antenna will provide more-than-adequate signal strengths.

* Digital frequency display. While the circuitry involved can add to the level of internal electronic noise in the radio, digital display makes it possible to more easily determine what station is being heard.

IV. ANTENNAS

For mediumwave reception, most receivers have a short internal ferrite rod. This will provide acceptable signals for high-powered distant stations. Ferrite rods are quite directional, and the radio can thus be turned to null out strong interfering signals, or to improve reception of the desired signal.

For more advanced DXing, external antennas offer certain advantages. The most common external antenna is a simple random wire, 15m (50 feet) or more run out the window and then as high as possible (up in a tree, for example). The wire can be connected to the external antenna terminal. If none exists, you can open up the radio and wrap the wire a few turns around the ferrite rod inside. It is also possible, although less desirable, to simply wrap the wire around the entire radio. If the radio has a terminal marked "ground" or "GND," another wire can be run from this terminal to a copper rod driven a meter/a few feet into the earth.

One problem with a random wire antenna for mediumwave work is it's inability to reject strong local signals. Most receivers today lack the dynamic range to effectively deal with the extremely strong signals from a local mediumwave broadcaster as picked up by a random wire antenna. Thus, some sort of tuned antenna is best for all but the most isolated, rural locations.

The most popular antenna for mediumwave DX today is called a `loop' antenna, and can be either of two types: ferrite rod or air-core wound wire loop. These antennas are small, 25-100 cm (1-3 feet) in diameter, and sit on the DXers desk or shack table where they can be easily turned by hand for optimum peak or null of a signal. Each design works with a tuned circuit before feeding the signal into your receiver, and usually this circuit includes a small powered amplifier. Generally speaking, the longer the ferrite rod, or the larger the diameter of the aircore loop, (to a point), the sharper the null of the antenna. 45 to 55 cm (18 to 22 inches) would be optimum for a ferrite rod antenna.

Air-core loops need to be made by hand, as there are none on the market. Ferrite loops, however, are available commercially from at least two manufacturers; Palomar Engineers and Radio West. Unfortunately, these two antennas do not have very long ferrite elements; and reviews of their performance in the mediumwave press tends to be mixed. Ideally, one would build their own antenna, or try to find either a used, older Radio West loop or Space Magnet antenna, both pre-1980. Plans for building all sorts of mediumwave loop antennas are available through National Radio Club publications. The address is found later in this message.

A more advanced antenna is the "beverage" antenna. This is a length of wire 300 m (1000 feet) or more, with extremely high gain and narrow-beam directional characteristics. It is usually, but not always, terminated at the far end with a 450 ohm resistor connected to a metal stake driven into the ground. It should be pointed in the direction of the desired station. The beverage antenna can, under good conditions, be used for transatlantic and transpacific DX.

For VHF-FM, the important factor is height. The higher one can place an antenna, the better reception will be. A multielement Yagi antenna, which can be found in Radio Shack or similar stores, will often produce excellent reception. Since a yagi is quite directional, the use of a rotor is essential for reception of stations in different directions.

V. WHAT'S OUT THERE TO LISTEN TO?

There are over 10,000 radio stations in the United States alone. It's important to have some idea of what to expect to hear. A good directory is important (see STATION LISTINGS below), but it's essential to know what the station information means.

For mediumwave, North American frequencies fall into three basic classes:

* CLEAR CHANNEL: These frequencies are 540, 640, 650, 660, 670, 680, 690, 700, 710, 720, 730, 740, 750, 760, 770, 780, 800, 810, 820, 830, 840, 850, 860, 870, 880, 890, 900, 940, 990, 1000, 1010, 1020, 1030, 1040, 1050, 1060, 1070, 1080, 1090, 1100, 1110, 1120, 1130, 1140, 1160, 1170, 1180, 1190, 1200, 1210, 1220, 1500, 1510, 1520, 1530, 1540, 1550, 1560, 1570, and 1580 kHz. Clear channels are home to one or two 50,000 watt powerhouse signals which can be heard reliably in half the country

or more. Other stations also occupy the clear channels, frequently using less than 1000 watts and very restrictive antenna patterns. In recent years, the US FCC has added many more low power stations to the clear channels, making reception of the big, primary, stations more inteference prone than it once was, but providing excellent hunting for the serious mediumwave DXer. Also, the clear channels are the primary hunting area for Latin American DX due to the relatively small number of North American stations on them.

* LOCAL: These frequencies are 1230, 1240, 1340, 1400, 1450, and 1490 kHz, and are sometimes referred to as the 'graveyard' channels by DXers. Stations on local channels can use a maximum of 1000 watts (somewhat higher outside the US). At night, these six frequencies tend to become chaotic, as the hundred-plus stations on each channel cause each other tremendous interference. Although the primary service area of these stations may be twenty miles or less, these stations have been known to reach well over a thousand miles under good conditions. Identifying distant stations on these channels requires a directional antenna, a good ear, and plenty of patience. The National Radio Club keeps distance records for all of the stations on these channels and publishes them in their bulletin, _DX_News_, regularly.

* REGIONAL: These are all the remaining channels. U.S. stations on these frequencies tend to be restricted to 5000 watts, although a recently signed international treaty allows for the possibility of 10,000 or even 50,000 watt stations on these frequencies if they do not interfere with other stations. In practice, only Canada has assigned high power stations on these frequencies. While not as noisy as the locals, reception on regional channels can be quite interference prone, with a listener able to identify three or four stations coming in simultaneously on one frequency. Most regional, or class III stations, use directional antennas to reduce interference with distant stations.

On VHF-FM, the American FCC has reduced its restrictions on power and antenna height considerably. Today, VHF-FM stations are allowed up to 50,000 watts from a 150 meter antenna in the Northeast and California; 100,000 watts from a 610 meter antenna elsewhere. Many stations, however, serve much smaller areas. These "Class A" stations use only 6000 watts or less. They were formerly restricted to just the following frequencies: 92.1, 92.7, 93.5, 94.3, 95.3, 95.9, 96.7, 97.7, 98.3, 99.3, 100.1, 100.9, 101.7, 102.3, 103.1, 103.9, 104.9, 105.5, 106.3, and 107.1 MHz. While the FCC no longer restricts class A stations to those frequencies, most are still found there. Likewise, only a few of the high-power stations are found on the old class A channels. For stations with extemely high antenna, the FCC mandates that transmitter power be reduced proportionately; thus a station with only 430 watts from a 220 meter antenna will reach about as far as a 3000 watt signal from the usual 91 meter antenna will.

VI. TIPS FOR BEGINNING

The most important element for beginning DXers is to get to know the dial. Spend a few hours scanning up and down the dial both during the day and at night. At night, many of the clear-channel 50kw stations, particularly the non-directional ones, should be easy to hear. Learn all the local stations. Find out which ones sign off at sunset, which ones go off late at night, and which stay on all night. This will affect which distant stations can be received. If you have a local station on all night, you shouldn't expect to hear another station on that frequency without some tedious nulling. Experiment with radio placement. As you slowly turn the radio, observe its directional characteristics. The Superadio III will receive signals coming from the front and back of the set the best, and attenuate the signals coming in `off the side' of the set. You can use this to your advantage and log several stations on a single frequency.

By all means, keep a log of all new stations you hear; someday you'll be glad you did! Better yet, keep it on the computer; that way you can share it with others on the net. After a few months of listening; you should have a list of 200-300 stations you've heard. Most of these will be your `regulars', audible almost daily. Beyond that, you can hunt for the rarer stuff. Try for all 50 US states (very, very difficult), or 20 countries (fairly easy in most locations). Within a few years, you'll likely have heard a thousand or so stations and have a very interesting logbook. Here's a `beginner's target list' of widely heard clear channel AM stations to start you out; from most locations in North America you should be able to hear all but four or five of these fairly easily.

540 CBK Canada SA Watrous 840 WHAS USA KY Louisville

VII. SOME ADVANCED IDEAS

Once you've mastered the basics, here are some suggestions for areas of specialty DX:

* QSLing: Since broadcasters by and large don't use the "Q-codes" so popular in Ham and shortwave DX, QSLs are called `veries' or verification letters by mediumwave and VHF-FM DXers. You'll probably have to send a letter to the station's chief engineer (names of actual verification signers can be found in the NRC AM Log). Expect verification in card form from the 50kw AM stations, and verification letters from just about everybody else. Small stations are often excited to find out they've been heard thousands of miles away, but you'll need to take special care to explain to them exactly what you want as they are likely to not know what a `verie' is. Also, remember to always include return postage with your request.

* DX Tests. A few stations still run special DX tests, usually arranged for either The NRC or The IRCA (International Radio Club of America) and published in advance in their respective bulletins (another reason to join!). In the past year alone, the following outstanding feats were accomplished via DX Tests: Hawaii (KUAI-720) was heard as far away as Ontario and Pennsylvania; New Jersey (via WJIC-1510) made it west of the Mississippi; and New Mexico (KHAC-880) made it to the East Coast! These are all fairly difficult states for most DXers (unless, of course, you happen to live in or near them).

* Equipment Tests: Some stations run experimental tests with their daytime power after local midnight, in accordance with US FCC and Canadian CRTC rules. Often these will be late Sunday night/Monday morning, when some stations sign off for maintenance (although not as many as used to do so). For example, in Chicago Illinois, many DXers have logged KOMO-1000 from Seattle Washington, testing when Chicago local WLUP goes off on Monday mornings; thankfully Monday mornings just happen to be the time when KOMO seems to like to test with their non-directional day pattern. This makes an otherwise almost impossible state relatively easy around the midwestern US.

* Sunrise/sunset DXing. Lots of interesting mediumwave DX can be had when your receiving station and the transmitter are in only partial darkness. It's possible to hear distant daytime-only stations this way. This requires a lot of skill, since there may be only ten or fifteen minutes in which to try. In fact most mediumwave DXers log the greatest number of stations in the hour or two right around local sunset, especially in the Fall and Winter months. Don't be surprised if, say, tiny KOKB in Blackwell Oklahoma blasts right through CBJ and other East Coast powerhouse stations on 1580, for a few minutes right around Blackwell sunset! Anything can happen in the turbulent sunset and sunrise hours.

* Transatlantic/Transpacific DX. Some DXers in North America specialize in trying to receive signals on the mediumwave band from across the ocean. This requires outstanding propagation characteristics and plenty of patience (a nice, quiet coastal location can yield some amazing results).

* FM Subcarriers and Stereo. VHF-FM stations are allowed to transmit separate programming on a subcarrier. This requires a special decoder

(one source is Bruce Elving's FM Atlas; see address above.) FM stations use their SCA (Secondary Communications Authority) subcarriers for transmitting data, background music, ethnic programming, and more. Some AM stations now transmit in stereo. With an AM stereo receiver, you can hear stereo signals from thousands of miles away.

* Meteor Scatter. The most masochistic of all VHF-FM DXers attempt to hear VHF-FM signals reflected from --yes, it's true-- meteors in the atmosphere. These DXers learn to identify stations on the basis of a few seconds' listening.

VIII. IDENTIFYING YOUR CATCH

Radio stations in the United States are required to identify with their full call letters and city of license once an hour, between 10 minutes before and 10 minutes after the top of the hour. Canadian stations are never required to identify, and many never use any identifier other than "Q107" or "Toronto's 590 AM." It's therefore important to use other clues:

* Time announcements. These can tell you at least what time zone a station is in. If there's only one or two stations on a frequency in a given time zone, this makes identification easier.

* Format. If you have a list of stations that includes formats, use it. That includes knowing what network a station uses, whether the station uses a satellite-delivered music format, what slogans the station might use, etc.

* Local color. You might be able to hear names of cities or streets or notable local personalities mentioned during commercials, newscasts, talk shows, or weather forecasts. If the announcer says, "Here's the weather for the beaches today...", the station you're hearing probably isn't in North Dakota (although note, interestingly, there IS a TOWN called Beach, North Dakota; go figure). Likewise, if the forecast is snow flurries and six degrees, you're probably not hearing Miami. These clues are among the most valuable.

IX. STATION LISTINGS

An essential tool for any DXer is a good station listing. This will help identify what's being received, as well as provide a way to contact the station being heard.

For North American AM stations, one essential tool is The NRC AM Radio Logbook, now in its 13th Edition. It includes day and night antenna and power information, format, hours of operation, address, verie signers, network affiliations, etc. Price is $19.95 for US, $20.95 for Canadian, three dollars cheaper for NRC Members. To order write NRC Publications, Box 164, Mannsville NY 13661-0164 USA. NRC also publishes FM and TV Logs. To become a member (highly recommended) and receive a year's worth of `DX News', send $24.00 for US, $25.00 for Canadian to: NRC Subscription Center, Box 118, Poquonock, CT 06064-0118 USA. All other

countries, write for price information.

Another concise and inexpensive directory is the M Street Radio Directory, published annually. The M Street listing includes frequency, power, directionality, format, address, phone number, and other listings less important to DXing. M Street also is indexed by call letter order and by frequency. The M Street directory costs $29.95 + p/h. It can be purchased directly from M Street at 800-248-4242 or +1 212 473 4668 voice, or +1 212 473 4626 fax. The address is M Street Corp., 304 Park Ave S Floor 7, New York, NY 10010 USA.

Another guide for VHF-FM DXers is Bruce Elving's annual FM Atlas. This includes maps showing every VHF-FM transmitter in North America, plus listings by state and frequency indicating power, stereo status, format, subcarriers, and slogans. FM Atlas does not include addresses or phone numbers. It can be purchased directly from Bruce Elving, PO Box 336, Esko MN 55733-0336. It costs $10.95 + $1.05 p/h.

Another listing is the Broadcasting Yearbook (commercial stations only), which is available at some larger libraries. The Canadian Almanac and Directory includes call letters, frequency, and addresses for Canadian stations.

For listings outside North America, consult the World Radio TV handbook, published annually and available through your local bookstore or radio specialty mail order outlets such as the Radio Collection and CRB Publishing.

X. CONCLUSION

Broadcast band DXing is an exciting way to hear the sounds of cities and towns around the nation and even around the world. It doesn't require hundreds of dollars of expensive equipment or huge antennas on the roof. All it asks of the would-be DXer is time, patience, and knowledge. Have fun!

THANKS TO...

Subject: Re: Tips on reading and posting via Internet Radio Journal

I don't know if this is just too obvious to have been mentioned, but at least some mailsystems, like the MMDF-based "msg" one we use here and in many military hosts, have a simple "undigestify" command (the single character command is the "@" sign in msg). This takes a Digest in standard format and breaks it up into separate messages.

It works OK with the preceeding two issues of the Radio Digest, in the new format, with only a few caveats -- in #310, the first posting didn't get separated out correctly (but it did in #311). And, because there are no "Date:" fields included in the Digest items, the individual messages have no dates on them.

I would recommend putting the Digest(s) into a separate file and then running undigestify on them, rather than have them mixed up with your regular e-mail traffic in your main mail file, whatever it may be called in your environment. (Here, it is "mailbox".) After the individual items are separated, it is then trivial to respond to, save, or follow-up on them.

Will Martin

[Moderator's Note: Good idea for those who have such a command. It should be in ALL systems. Bill]

# 716. Howard Stern radio listing - monthly post

Newsgroup: rec.radio.broadcasting
Date: 1993-05-24 04:43:21 UTC
From: ckunz@src4src.linet.org
Message-ID: <1993May24.044321.26327@gagme.chi.il.us>
Source record: 43204

Hi folks, for some of you this is the last listing you'll see 'til you return to school in Sept (so, we better make this a good one :) We've got new affiliates coming (i.e. Miami, Atlanta, Detroit, Minneapolis) but none have sprouted at the time of this posting. As usual, new affiliates that pop up will be added to the list, changes made in between monthly postings will be posted to alt.fan.howard-stern.

And this just in... GARY DELL'ABATE (aka Baba Booey) HAS A PRODIGY ID. As far as I know, the ID I have is Dave Herman's. If anyone knows what Gary's ID is, please e-mail it to me. If Prodigy ever gets an internet gateway, then Gary will be getting junk mail from US! :) All right, enough babble, have a great summer, and here's the list...

Chuck
===
Welcome to the monthly Howard Stern Radio Network posting! These are radio stations currently carrying the show. Also included are some cities which may pick up Howard in the future. All times are local times. Thanks to everyone who has sent e-mail making corrections and/or additions, they are greatly appreciated! Please continue to do so!

> to visualize how this works.

This is due to interaction of the EM waves emitted from each aerial.
It can be illustrated mathematically,but is extremely tedious as it
involves lots of vector calculations.
(Far better to plug the equations into a computer and let it draw
a diagram for you.)

Basically the gain is higher, but the angle at the -3dB points is
smaller and the impedance changes, necessitating matching networks.

> Furthermore, how much gain can one get from stacking more dipoles at
> 5/8 wave? I have long wanted a nice omni horizontal gain antenna for
> our RPU repeater, and if 4 bays of this would get us 10 dBd I'd gladly
> take the time to build it.

I used to deal with stacked arrays a lot as a landmobile technician.
We used stacks of up to 8 dipoles, which gave gains of 12dBd

The aerials must be spaced one wavelength apart and fed with a
Wilkinson divider arrangement. This ensures a constant impedance is
seen by the transmitter.
Trying to space them 5/8 wavelength apart will make the vertical lobes

grow rapidly with more than 2 aerials and make a nightmare of
impedance matching.

Array 3dB beamwidth is calculated as K/Nn, where
K=51 degrees
N is the distance in wavelengths between antenna centres
n is the number of antennas in the stack.

For a vertical broadcast array, beamwidth is only important if your
transmittion site is high - you may actually *decrease* received
signal strength for receivers close in to the transmitter if you
make it too narrow. I've seen that happen a few times with mountaintop
transmitter sites.

Note that you get a gain of 3dB (and a halving of beamwidth) for
each doubling of the number of antennas in a vertical array, so you
rapidly run into the law of diminishing returns.

ie. 2 antennas gives 3db gain over 1
4 " " 6dB
8 " " 12dB

Double the signal strength is 3dB.

Non-technical types may think that double ERP == double distance.
The actual increase is only around 22%. To achieve a doubling of
transmission distance, a gain of 10dB on the original ERP is
required.

(ie: Without changing the antenna, a tenfold increase in transmitter
power is required.)

If you're only looking to cover a specific area to one side only of
the transmitter, have lowish power and simply need more signal
strength in the target zone, then perhaps you should consider a
yagi aerial. There are commercial designs readily available which
will handle 300W+. They're great if you need to cover a single town
from a hill on one side of it, and have the advantage that for
mountain top use, they can be angled downwards for spot coverage.
To do this with an omnidirectional array requires careful cable phasing.

Antenna bay design is a complex and tricky business, though these
days it's made much easier by the application of computers to do all
the calculations. (and there are a LOT of calculations!)

FWIW: If you want 6dB or 9dB gain and need omnidriectional radiation,
consider a prebuilt endfed phased array. These are used
extensively in telepaging (150MHz) as they can be just bolted
on the top of a tower. Downtilt versions are available.

> --

>

In most countries, ANY change in broadcast antenna design or transmitter power over that which is authorised will necessitate a resurvey of projected coverage, an application for the change to be submitted, a visit from the appropriate authority's inspectors, and a physical coverage survey after the modifications are completed.

If you're restricted to circular polarization you are largely restricted to stacking aerials. If directionality is required, a helical antenna may be useful.

## 721. Article on Detroit Radio in the Detroit Free Press

Newsgroup: rec.radio.broadcasting
Date: 1993-05-24 04:49:16 UTC
From: kaplanj@emunix.emich.edu
Message-ID: <1993May24.044916.26586@gagme.chi.il.us>
Source record: 43209

There was an article in the Free Press entertainment section (the paper is called the Detroit News and Free Press on the weekends. I'm talking about one of the free press sections.) about talk radio called "Tuned in to Talk" "Radio news and views are music to the ears of Metro Detroiters"

There are pictures and brief bios of some of the big name local talk show hosts, and boxes with the vital info about the 7 talk stations in town, plus 3 'also ran' stations in Ann Arbor and Toledo.

"Talk and information stations are, with more outlets and a greater share of listeners in Detroit than anywhere else in the United States."

Do you folks want more information from this article? Can you find a copy at the library? Do you want me to type more?

[Moderator's Note: I hate to condemn you to more typing :-), but I would love to hear more. Bill]

> I have been dx-ing am radio stations for over
>30 years, and have logged more than 2800 of them.
>I'm going to be in Fresno, Ca for a couple days, and am wondering
>about the daytime dx conditions there.
You should be able to get a lot of the central valley's stations from bakersfield to at least modesto or stockton-- maybe even sacramento.

I know that in modesto (2 hours north of fresno) I have gotten several stations from fresno, it should be no problem getting stations that distance from fresno in the valley (that would include bakersfield). At night you should be able to get stations from los angeles and the bay area too without a lot of problems. Try 770 KPLA (riverbank), 1360 KFIV (modesto), 1530 KFBK (sacramento), 680 KNBR (san francisco), 740 KCBS (san francisco) for some stations to the north.

To the south try 690 XETRA (tijuana), 1070 KNX (los angeles), 640 KFI (los angeles). These are all stations I have gotten with little trouble in the past.

## 723. InteRadio items

Newsgroup: rec.radio.broadcasting
Date: 1993-05-24 04:53:24 UTC
From: Will Martin <wmartin@STL-06SIMA.ARMY.MIL>
Message-ID: <1993May24.045324.26744@gagme.chi.il.us>
Source record: 43213

I've been wondering why the Internet Radio Digest carries a batch of separate articles from this InteRadio newsletter, but doesn't just carry the whole thing in special separate issues, like it does EuroNews or some other such long postings. Does InteRadio, as an entire newsletter, exist in electronic form? If so, we might as well get it all. (Or maybe it has its own e-mailing list and distribution?)

Or is it that it really is just a paper newsletter, and some of the contributors have their articles in electronic form and send them on to RRB?

Regards, Will

[Moderator's Note: Articles which are quite large, generally are placed in seperate Internet Radio Journal issues. Unless the article is really big, I try not to place it in a Journal of its own. There is no other reasons for the practice. I have never seen an entire InterRadio newsletter, I get what they send me and nothing more. Bill]

## 724. Status of KSLQ, AM & FM, Washington, MO?

Newsgroup: rec.radio.broadcasting
Date: 1993-05-24 04:53:53 UTC
From: Will Martin <wmartin@stl-06sima.army.mil>
Message-ID: <1993May24.045353.26785@gagme.chi.il.us>
Source record: 43211

I was wondering if anyone out there could tell me what happened to KSLQ (1350 AM & 104.5 FM) in Washington, MO. I had a vague recollection of hearing something about it going out of business or being taken over or renamed, but I can't recall any details. If that happened, it had to be sometime in 1992 since it is still listed in the 1992 reference books I have, and it consistently showed up on the "radio log" put out by Radio Free America (and is in the current one dated May 17), even though I thought it was off the air. It hasn't been listed in the Post-Dispatch newspaper's little block of radio-stations in the Everyday section for quite a while (but that isn't a reliable source -- it omits other stations which I would consider to be local and which I can pick up).

It is possible I am completely wrong about the station going off the air. Even though I can't pick up any local-quality signals on those frequencies, the station is listed in the references I have as being rather low-powered, and I recently learned that Washington, MO, is further away from St. Louis than I had thought it was. So maybe it is really still out there. The thing is, I recall the "KSLQ" call letters as being advertised and promoted in the St. Louis market (as one of the rock stations I never listened to) in past years (maybe decades ago); of course, maybe failing memory applies to this, too... :-) With the low power that station has, it couldn't have competed in this market. Perhaps the call letters were used here in St. Louis by some other station, which then went dark or was renamed, and the call was then adopted by this Washington, MO, station? That's just a guess...

Thanks!

Regards, Will

## 725. Liberating the Airwaves/Slingshot

Newsgroup: rec.radio.broadcasting
Date: 1993-05-24 04:54:13 UTC
From: resystom@web.apc.org

LIBERATING THE AIRWAVES

The rightward slide of counter-institutions of dissent is epitomized in the demise of community radio. At one time its anarchic formats and open access to anyone in the communty were its strengths in defending the airwaves against the corporate structure of liberal public radio and its commercial counterparts. [Here in Berkeley former "movement" radio station KPFA is in crisis as it attempts to restructure to be more competitive.]

Community radio stations, mostly on college campuses or in university communities, often self-censor themselves today and have been drastically less adventurous and have toned down their former oppositional leftist stands. They openly compete for listener market share. Authentic voices of dissent, however, can still be heard and an inspiring example is Black Liberation Radio in Springfield, Illinois. WIth just a one watt transmitter it broadcasts, in open defiance of federal regulations, 24 hours a day from a low income housing project and manages to cover 70% of the African-American community. It was founded by M'banna Kantako, himself blinded as a young man by the police, and one of its strengths lies in the voice it gives to victims of police brutality, or what Kantako's calls "official government-sponsored terrorism".

The station grew out of a tenants rights association that challenged the local black bourgeoise which claims to represent them in municipal government. Among its other demands for community control, the association rejected their city alderman's plan for a weak citizen review board for the police, demanding instead a much stronger one. Out of this began the antecedents to Black Liberation Radio (BLR) which broadcast out of Kantako's apartment in the housing project in 1987. It began with just a few hours an evening, 3 times a week. Two years later it began broadcasting first hand accounts of police brutality by local African-Americans, arousing the chief of police to report the "illegal operation" of the station to the Federal Communications Commision. Kantako's response was to double the broadcast days and hours. When a federal court ordered him to stop broadcasting, he went on seven days per week. A year ago he put BLA on the air 24 hours a day, 7 days a week. It has broadcast continuously ever

since, except during a live interview about white supremacy one year ago that was interrupted as a large caliber bullet smashed through a window, narrowly missing Kantako, delaying the transmission while he brushed the shards of glass off of himself.

Black Liberation Radio's mission is to overthrow the government and this is why "liberation" is used in its name and is reflected in its programming. Live interviews with radical activists nationwide, along with talks and lectures by everyone from Malcolm X to Noam Chomsky, are aired and books are read on the air about African-American history, culture and liberation struggles. The music played is an eclectic mix of hip hop, reggae, and African music, all with a political bent and consciously avoiding sexist, racist and materialistic lyrics. At one time there were as many as 16 young people who regularly went on the air, but many have been expelled from school and harassed by the police. Some youth are still involved with the station, but others are involved with the community's Marcus Garvey Freedom Summer School (which the Kantakos have operated for 7 years) and the Malcolm X Library. BLR has become such a strong part of the communities infrastructure that support, not only locally but nationally and internationally, has allowed it to fend off attacks by local authorities and the FCC. The National Lawyers Guild has even considered taking on BLR's plight as a test case to challenge the institutional racism and classism that is an enormous obstacle to oppressed people achieving free speech.

Black Liberation Radio embodies a vision of local self-sufficiency, voluntary, non-hierarchical cooperation and decentralized structures that are the heart of any social revolutionary movement. Kantako deliberately rejects the term "pirate" radio because of the connection between piracy and the slave trade. Its political stance is counter- hegemonic, and has defined itself as openly oppositional; it was Springfield's only radio outlet that opposed the Persian Gulf War. After the Rodney King verdict in Los Angeles, the John Hay Homes, where BLR is located had its own "micro-rebellion" that was a model of insurrectionary success. Scores of young people outflanked the police in two nights of skirmishes and destroyed the police substation and the housing authority security office. Amazingly, no one was injured and and no occupied apartments were attacked. Kantako and his wife broadcast the action live and reported the location and movements of the police and because of this are now under the investigation of the mayor and the police.

Kantako coined the term "micro radio" to describe the genre represented by BLR and he envisions every community everywhere having its own variation as a means to spread information, rather than maintaining cultural hegemony through hierarchical control. He sees the establishment of black liberation radio stations as a cheap and easy to operate way of exposing and resisting the

genocidal policies of the U.S. power structure and their black professional collaborators. The limitations to the proliferation of the micro-radio movement have not been financial or technological, but political and the lack of collective will to stand up to the federal bureaucracies that prevent free communication. With courage and commitment to human liberation we can foment revolution with micro-radio stations in every community.

## 726. Infinity's NYC AM station to drop heavy metal

Newsgroup: rec.radio.broadcasting
Date: 1993-05-24 04:58:22 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993May24.045822.26976@gagme.chi.il.us>
Source record: 43214

Does anyone in metro NYC area have any information on Infinity's WZRC-1480AM changing formats sometime next week? I've heard they're going to drop the rock/heavy metal format, which that station had for the longest time, in favor of... country???? If this is true, I can't believe Infinity is becoming so unimaginitive and unresourcefull with its programming decisions...

The country music format seems to be like a bad rash spreading around many NorthEastern radio markets...

[Moderator's Note: Gee, I seem to remember my father saying the same thing about Rock & Roll in the sixties. Today's country is really mostly rock anyway, and it is *HOT*, not only in the N.E., but everywhere. And compared to some of the stuff on the air, it aint all that bad, really. I am amazed that we have only one country station in Chicago. Bill]

-Mark

## 727. Old-Time Radio in Dallas?

Newsgroup: rec.radio.broadcasting
Date: 1993-05-24 04:58:33 UTC
From: blick@latech.engr.LaTech.edu

My wife and I plan to be in Dallas over the Memorial Day weekend. I would like to find out if any stations in the Dallas area carry old-time radio programs.
If you know of any, I would appreciate your posting the frequencies and times.
Thanks.

## 729. Switched 56 Directory

Newsgroup: rec.radio.broadcasting
Date: 1993-05-26 07:02:25 UTC
From: RIELAND@vilas.uwex.edu
Message-ID: <1993May26.070225.17802@gagme.chi.il.us>
Source record: 43220
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Attached is a file I've created over the past couple of months that you might find interesting. I've already posted it to PUBRADIO and National Public Radio's Teletype, but your group has more commercial broadcasters who I think will find it interesting.

The Switched Digital Audio Terminal Directory (includes Switched 56 and ISDN terminals used for audio links) was created after we installed Switched 56 last January (the process took over a year). We knew that NPR had it and we hoped to use it to link our 6 Regional Bureaus together for news pieces (we use Comrex 2-Line Units now). But our Producers kept asking questions like "Can I use SW56 to interview this Scientist in Palo Alto? or this Professor at Berkley?" After many phone calls and requests to PUBRADIO users to submit their lists of users, I managed to verify the 8 pages of users hereby submitted.

# 730. Special SW/Public Radio broadcast on Bosnia, Revised

Newsgroup: rec.radio.broadcasting
Date: 1993-05-26 07:02:31 UTC
From: cee@wshb.csms.com
Message-ID: <1993May26.070231.17815@gagme.chi.il.us>
Source record: 43221

PRESS RELEASE - REVISED May 25, 1993

WORLD NEWS SPECIAL ON BOSNIA FROM MONITOR RADIO

BOSTON, MA: Monitor Radio will produce a "live" two-hour World News Special on the conflict in Bosnia on Saturday, June 5, at 1600 UTC. It will transmitted live to most of the world on the Montors three shortwave stations, and also on most American Public Radio affiliate stations.

This will be an unprecedented collaboration between several prominent radio producers: Monitor Radio, Marketplace, BBC World Service, Deutsche Welle, and the Canadian Broadcasting Corporation, as well as several noted independent producers. The program will employ some of the top experts and journalists, as well as the people most affected by the battle, to draw connections between what has happened, what's likely to happen, and what it may mean in shaping foreign policies for a new world.

The program is comprised of live and pre-recorded reports from various locations around the world, live round-table discussions with leading politicians, humanitarians, military and media experts, call-outs, and debate among serious-minded partisans on the appropriateness of military intervention and of other options. The objective is to present voices that will offer listeners some understanding of this difficult conflict by exploring the history, culture, and contemporary strategies for the region.

Two highly-respected reporters on the ground in Bosnia are already gathering tape. Former BBC Yugoslavia correspondent Misha Glenny is one of the premiere reporters on the region, author of "The Fall of Yugoslavia: The Third Balkan War." Noted American independent producer Sandy Tolan is one of public radio's most talented and creative producers. Their reports will focus on people living in the midst of the violence, putting a "human face" on the conflict while searching for the implications of this tragic battle in Bosnia.

The role of the U.N. in the Balkan's strife, historically, currently, and in the future, will be the topic of a piece reported by Hal Jones, senior foreign correspondent of the Canadian Broadcasting Corporation.

There will be historical pieces designed to clearly illuminate the events and individuals which have shaped the attitudes of the combatants. These will be based on interviews conducted by Monitor

Radio's Rod MacLeish.

Honored guests participating in the round-table discussions will include:

Canadian Major General Lewis MacKenzie, former U.N. commander in Sarajevo.

Maggie O'Kane of the Guardian in London who broke the story of the "detention camps" last summer will be live from Bosnia.

Roy Guttman, who won this year's Pulitzer prize for coverage in Bosnia will report from the Deutsche Welle studios in Bonn.

Charles Simic, another Pulitzer prize winner, and who was born in Belgrade, will read from his poetry.

Slavenka Drakulic will do a reading from her book on the war "Balkan Express" live from Seattle.

Shortwave frequencies on which this special program may be heard are:

June 5, 1993 Station Frequency Region

1600 UTC WCSN 17510 kHz Europe/Africa
1600 UTC WSHB 13710 kHz North Am/Caribbean
1600 UTC WSHB 17555 kHz North Am/Mexico
1600 UTC KHBI 11580 kHz Asia/Japan
1600 UTC KHBI 9355 kHz Africa/So. E. Asia

Monitor Radio is a broadcast service of The Christian Science Monitor, transmitted daily on shortwave to an estimated 190 countries world-wide, and is also distributed to nearly 200 American Public Radio stations throughout the United States.

For more information, contact Sue Schardt at (617)-450-7820.

## 731. e: Infinity's NYC AM station to drop heavy metal

Newsgroup: rec.radio.broadcasting
Date: 1993-05-26 07:02:59 UTC
From: fishbein@shark.gsfc.nasa.gov
Message-ID: <1993May26.070259.17855@gagme.chi.il.us>
Source record: 43219

Infinity (and to a greater extent, Landmark) are too busy worrying about paying their fines than programming ... and, despite the first amendment, it's stuff like heavy metal that gives them a bad image. Besides, who listens to music on AM anymore?

>The country music format seems to be like a bad rash spreading around many
>NorthEastern radio markets...

Interestingly enough, country has been on a steady rise in popularity since the 1970s. Good marketing, I'd say. Country stations have topped the ratings in two metropolitan areas I've lived in, as well. This is not really new ...

[Moderator's Note: Good marketing may get some people to 'try out' a sound or a station, but the incredible rise in country's popularity is not due (IMHO) to some Urban Cowboy hype, but because the country music of today is far superior to the country music of 20 years ago. Today, country is produced pop, bouncy dancable music with lyrics you can understand and content that is much more varied than the whiny, cheatin' and drinkin' songs that many people still consider to be 'country', and more ralatable than much of the other pop music around today. I never liked country in the sixties and seventies, but these days it is often a welcome relief from the predictable CHR, AC and such. Bill]

> and distribution?)
>
> Or is it that it really is just a paper newsletter, and some of
> the contributors have their articles in electronic form and send
> them on to RRB?

It is a paper newsletter. Beginning with the last issue most of
the material was posted to various lists. We will do this again
for the next issue (due out in June).

We would like to make it available electronically but for
technical reasons are unable to do this. If anyone can help it
would be greatly appreciated. Ideally we would run three lists
(InteRadio is published in English, French and Spanish) and would
make issues of the newsletter available at an FTP site.

Our hope is to have this in place for AMARC's 10th anniversary
issue, scheduled to be published at the end of September.

Any suggestions or offers of help would be most welcome.

Bruce Girard

## 733. Micro-radio (Was: Re: Liberating the Airwaves/Slingshot)

Newsgroup: rec.radio.broadcasting
Date: 1993-05-26 07:07:09 UTC
From: hhallika@tuba.calpoly.edu
Message-ID: <1993May26.070709.18102@gagme.chi.il.us>
Source record: 43217

All this discussion of "micro radio" makes me wonder how it would be if the FCC set aside a couple FM frequencies that were license free with somewhere between 1 and 10 watts (perhaps with limits on ERP and HAAT, but maybe not). People would be free to use these frequencies on an interference accepted basis. It would be totally free of government regulation (free of content regulation, but limited power to keep someone from monopolizing the frequency for a large area). It would work out to be a sort of neighborhood radio. It might be compared to a newsletter done at the local copy shop while a full power station would be similar to a newspaper with big presses, etc. Would it just turn into a mess as everyone hops on the same frequency? Would it be a regulatory nightmare (regulating power, etc.)?

[Moderator's Note: The subject of 'legalized pirate radio' or micro-radio has been a hot topic on alt.radio.pirate. The consensus there seems to be that the FCC will never legalize any form of 'people radio' because it would be hard to regulate (and after all, what would the feds do if they could not regulate somehing?), and would be frowned upon by established stations who would not welcome the creative competition for listeners. I have to say that I agree to great extent. If such micro-radio was approved, it would probably be plagued by the same censorship and content regulation that the higher power stations are dealing with. Sad, but I fear true. Your analogy to a newsletter vs a newspaper is interesting, but it has already been pointed out that broadcast media is far more heavily regulated in terms of content than print media. I am amazed at how willing the American public is to have their airwaves censored, when they would probably by righously pissed if similar regulations were handed down on the heads of print media. A recent (unscientific) Chicago Sun-Times poll showed a disheartneing 63% in favor of government fines to stations and DJ's who utter 'foul words' :-(. Also, in most urban areas, Chicago is a prime example, FM channels are already crowded. Low end FM (college and educational) stations are sandwiched in so tight that when one goes off the air (like at midnight) the co-channel 100 watter from halfway across town blares over the air monitor of the station signing off! I have seen this happen several times. So where would we put these stations? Don't get me wrong, I'd love to see them, but in todays climate, I highly doubt it. Bill]

## 734. LP AM antennas

Newsgroup: rec.radio.broadcasting
Date: 1993-05-31 05:12:33 UTC
From: Andrew Reynhout <reynhout@cs.uri.EDU>
Message-ID: <1993May31.051233.14999@gagme.chi.il.us>
Source record: 43222

Part 15 makes allowance for broadcasting in the AM band, (with
numerous restrictions. I would post the text, but I don't have the
CFR here at home.)
In any event, we meet all the requirements, and would like to build
a low-power AM station to replace our old carrier current system, which
is a bear to maintain.
I spoke to people from Radio Systems and from LPB at a convention,
and they said that I should stick to CC. I have *many* AM transmitters
to maintain. Too many for me. They're old and acting their age.
CC built both of those companies, and it's definitely in their economic
interest to keep me as a CC customer...when I spoke to LPB, they told
me that we were one of their largest installations...nothing they should
be proud of, given the current status of the system.

Anyway. I want to build an antenna for use with a ~10W AM xmitter.
I tried a simple longwire approach, but I couldn't get anywhere near
a halfwave (or even quarterwave,) given the frequency (580kHz), and
the propagation was awful. My question, then, is: where should I begin
looking for new ideas for the antenna design. I can't find any good
references on AM antenna design. I don't suspect there's much use for
them.
I am hoping to keep the ground plane small, the total antenna length
short, and the pattern reasonably omni-directional...(although a major
lobe wouldn't be entirely undesireable. I'm not at all opposed to moving
to a higher frequency.

We are waiting for the window to open to apply for a new licensed
facility. Right now only migration is open... But this would be an
interim fix. We all know how long FCC applications take. Besides, I'm
not entirely certain that I want our AM station to be licensed or to
cover any more than our campus. Our FM has listeners in four states,
(OK, they're *small* states :-) and the AM has traditionally been used
for local-only very special interest programming. (It can only be
heard in buildings on campus...presently only half of them...)

I'm interested in any and all ideas or pointers to ideas. Let me
know if you're interested in more info on the Part 15 text. I have it
somewhere. The main point is that the field strength of your emissions
has to drop below a certian point at a certain distance from the edge
of property owned by your educational or religious group. Obviously,
this cannot be done in any environments other than large, contiguous
parcels of land. City campuses are right out.

Thanks.
Andrew

[Moderator's Note: I tend to agree that if you are choosing to be on unlicenced AM, that you stick to carrier current. Free radiated AM, to remain legal, will be spotty and quite noisy anywhgere but right near the radiating element. And 10 watts is absolutely out of the question. Try 100mw into a 3 meter antenna! Also realize that your range will be measured in feet, not blocks or miles. Better off trying low power FM. Bill]

Unfortunately, with the experience of CB loud in the ears of most people (and
especially regulators) the "low power" people radios would soon find RF amps
to become rather healthy powered entities. The FCC has not got the manpower
to police this at this point, and I'd suggest there would never be an
appropriation to care for it.

Eventually the allotted frequencies would be not better than they were in CB
land or in the '20s, when the loudest transmitter won.

(most of Bill's note deleted)

To an extent, the FCC tried to experiment with this through LPTV, that truly local form of broadcasting that was going to revive over the air television. Sadly, they are venturing further toward a similar plan (and I expect the same bad results) with the new multiple ownership in market rules. Stations around here get ahold of those LP FM allocations, and use them to rebroadcast their dying in popularity AM signals ... we also have two TV stations that are left over from the LPTV days that are nothing but repeaters for other stations.

Scott Dorsey of Virginia, who also posts to this conference, suggested in a private letter that the answer might be for the FCC to revive the Class D broadcast facility (it was just an answer for a different question, that time).

[Modertator's Note: Yeah, LPTV had degenerated for the most part into video jukeboxes, smaill pay-to-play religous stations and such. Too bad. Bill]

## 737. Starting a Radio Station?

Newsgroup: rec.radio.broadcasting
Date: 1993-05-31 05:13:38 UTC
From: tmh@well.sf.ca.us

Source record: 43225

I am seriously interested in starting a radio station but have no idea on how to do it. Does anyone know the steps to take, costs involved, resources I could use, tips and traps, and anything else I should I know? I realize most answers will fall in the it's to hard and expensive area but I would at least like to know what I am up against.

Thanx for any help

## 738. Canadian Superadio III

Newsgroup: rec.radio.broadcasting
Date: 1993-05-31 05:17:34 UTC
From: ted@dgbt.doc.ca
Message-ID: <1993May31.051734.15377@gagme.chi.il.us>
Source record: 43226

I have just bought one of these, returnable of course, at my local Home hardware. The date code is 2229C. On this newsgroup, reports of sensitivity problems were circulated for models with a number earlier (lower) than x341. Does this apply too to the Canadian models? Do I presume that the "C" is the code for "Canada"? Should I return it? The way Home Hardware works, they cannot accept an order for a radio conditional on a code number, even though this appears clearly on the outside of the box (as well as inside the radio battery compartment). So a second question is, does anyone beside Home Hardware carry it in Canada (Ottawa) who will accept a code-conditional order?

# 739. New York's Z-Rock affiliate goes Country

Newsgroup: rec.radio.broadcasting
Date: 1993-05-31 05:17:40 UTC
From: testnet!pr
Message-ID: <1993May31.051740.15389@gagme.chi.il.us>
Source record: 43227

As rumored almost a week ago in this newsgroup (Mark Shneyder), New York City's WZRC-1480 has gone country, dropping SMN's Z-Rock.

It happened like this: (I have airchecks)

Thursday May 27, 1993. At noon EDT, as Led Zeppelin's "Trampled Underfoot" ended, this announcement came on, "1480 Z-Rock would like to say thank you for listening. At this time we're signing off to say goodbye. If rock 'n' roll is your type of music, we invite you to listing to 92 point 3 FM K-Rock, with only the best classic rock ever made. Thanks again for listening to 1480 Z-Rock WZRC New York."

This was followed by open carrier, and close to 1:00, some bursts of tones.

1 PM Female voice says "Your fulltime country music station WZRC New York City" (fulltime operation, just not fulltime music, as they went back to another hour of open carrier).

2PM the Bonanza theme comes on, then the same ID as at 1PM, into "Kansas City Lights." After 2 songs a very even-tempered "WZRC" ID comes on, then a pause, then more DJ speaking announcing the songs.
(Typical 'try to fool people into thinking I gave the calls and then paused to catch my breath and speak again' satellite presentation).

After several more songs and then a bunch of commercials (the same ones that Z-Rock was running) came the promo, "This is Country (song excerpt) and this is New York's New Country, AM 14-80 WZRC New York's New Country Station."

Other notes: Turns out the NY Post ran a story on this (smokescreen format, intending to eventually lease the frequency to Korean broadcasters) last Friday, May 21. WZRC is one of three stations owned by Infinity in NYC (WXRK, WFAN) and was previously Spanish-formatted WJIT. As of Wednesday the people at Z-Rock/SMN in Texas didn't have (admit to having) a clue about what NYC was doing. The next nearest Z-Rock to NYC is at 93.3 from New Paltz NY, serving the Poughkeepsie market. If they were to call it Real Country, the call letters would fit but the satellite presentation may limit those possibilities :)

Thanks to Mark Shneyder for calling this to attention and to Bruce Slutsky for updates on the situation.

Paul Richards

## 741. Call letter suit in Boston

Newsgroup: rec.radio.broadcasting
Date: 1993-05-31 05:19:06 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993May31.051906.15454@gagme.chi.il.us>
Source record: 43228

* Greater Media's new country station WBCS 96.9FM("We're Boston's Country Station") hasn't been on the air for a full month yet and it's already getting sued by Infinity's AOR powerhoise WBCN(104.1FM). Infinity is claiming that 'BCS's calls sound very similiar to 'BCN's and filed a claim in the US District Court in Boston to force Greater Media Inc. to change the calls.

When the new WBCS calls were first announced, I predicted in this very group that WBC*N* people wouldn't stand for it. My prediction was solely based on the fact that WBCN's current program director Oedipus was responsible for pocketing in the neighborhood from $5 to $6 million dollars from none other than Mr. Ted Turner for the rights to very familiar "WTBS" calls many many years ago. Oedipus was running MIT's WTBS 88.1FM at the time when Turner decided to go for those calls. 88.1FM became WMBR and since that day most of the money for their operational budget comes from the interest earned on the money Turner paid to them.

Oedipus is doing exactly the same thing to Greater Media in this case. Look for them to settle ouf of court with 'BCS handing out a large chunk of change to 'BCN.....

-Mark

# 742. MY DREAM OLDIES STATION

Newsgroup: rec.radio.broadcasting
Date: 1993-05-31 05:22:01 UTC
From: gbsaylin@ucdavis.edu
Message-ID: <1993May31.052201.15571@gagme.chi.il.us>
Source record: 43229

I am very board with Oldies (50s/60s) stations because they rotate the same 300 or so songs. How many times have you heard "Unchained Melody", "Someday We'll Be Together" , "Daydream Believer" run into the ground? These stations are really short changing the oldies.

If I had my own station, I would program at least 30,000 songs from the late 40s (early RnB, C/W,etc.) up through the late sixties.

No song would be repeated for at least an 8 day stretch. Only during the Friday and Saturday night request shows would the song be able to be repeated during the restricted 8 day stretch. I say at least 8 days so a dj won't repeat a song on the same day a week later.

The music would emphasize the songs that never get airplay anymore. For example, tunes from folk artists including The Weavers, Kingston Trio, The Highwaymen, Joan Baez, Chad Mitchell Trio, Dylan,etc. Skiffle band music from Lonnie Donnegan, The Vipers,etc. Millie Small's (of "My Boy Lollipop" fame) ska "Sweet William", obscure mid sixties garage band regional and minor national hits (13th Floor Elevators, The Sonics, The Chocolate Watchband), worldbeat oldies (Los Indios Trabajaras' "Maria Elena", Ray Barretto's "El Watusi" etc.), rockabilly & fifties rock (Link Wray, Johnny Burnette Trio,), the surf you never hear (Dick Dale), early RnB (Louis Jordan,etc), Chicano garage rock(Thee Midnighters, Cannibal and The Headhunters), some of the early ska, rock steady and reggae (Prince Buster to Desmond Dekker), lesser played British invasion (The Barbarians to less known early Who), less known Do Wop, Blues (Jimmy Reed, Buster Brown), lesser known girl groups, etc.

My station would also play some of the well known hits, but the quality stuff like "96 Tears," "Pipeline", Bill Dogget's "Honky Tonk" and even novelties like "They're Coming To Take Me Away" to "Mr. Custer".

The shlock from Pat Boone covers to "Honey" would not be given time.

For well known artists like The Doors: Instead of Light My Fire, we would air even some occasional album tracks prior to the seventies like "Spanish Caravan" and "The Alabama Whisky Drinking Song." Instead of hearing the same Stones and Beatles songs that are run into the ground, we would air the 90% plus that nobody else plays. There's tons of Motown (even Supremes) you never hear anymore.

This station would be a success because the musical sounds (I emphasize sounds) would be familar. It would be that instead rotating the same 300 songs (from "Poor Side of Town" to "My Girl"), we would air non-repeatable 30,000 plus songs and ironically these songs (or at least the MUSICAL SOUNDS) would be something folks would recognize. Suddenly, oldies radio

would become very refreshing. People wouldn't get bored but fascinated instead. It would be the music we grew up with, only this time AT LEAST MOST OF IT!!!!

Please post your responses under: RE: DREAM OLDIES STATION

Thanks

Gary Saylin,
KDVS Davis radio dj

[Moderator's Note: Bless you, Gary, Bless you. While I doubt that todays compartmentalized audience would sit still for such a wide variety of music on one station, I applaud you for your vision and radio would be better off, if each station had a few more minds like yours at work in programming. Best of luck selling the idea. Bill]

<names deleted>

Thanks for the effort, Steve. Please post info about the IRCA
convention: what, where, when, who, why and how much!

This group really needs more postings of loggings. I hope to
see more reports of upcoming DX tests and MW loggings in the
fall. Meanwhile, what are you other MW DXers using?

I use a Sony 2010 or DX-440 right now, as I don't have an
external loop at the moment, to use on my R8.

Has anyone seen or tried the new Kiwa air-core loop?

Good listening.

Jim

I was tuning past 3EE, a low-rating (around 1%) easy linstenning station here in Melbourne, just the other day, when I noticed something unusual. 3EE were sounding alot better than they used to (they used to sound just ordinary). Had they finally got their act together?

Unfortunately, it was not to be.

It turns out that 3EE had its licence taken over by 3MP, Melbourne's other easy listenning station (much higher rating), and the two are now simulcasting on 693 (3EE's frequency) and 1377 (3MP's frequency), both on the AM band.

What will happen next?

Never mind 100-watt FMs! I used to work at WCAP(AM) Lowell MA, 5kw on
980 kHz, where I was the first person in the door on Saturday mornings.
When I'd walk in, the air monitors were blaring WTRY(AM) from Troy NY,
also 5kw on 980 kHz, some 150 miles away! Here in Waltham, some 25
miles south of Lowell, I can hear WCAP and WTRY about equally well at
night until WCAP signs off.

I wonder what we'd hear on the air monitors at WBZ if both 50kw transmitters
AND the backup 10kw all went down? :-)

[Moderator's Note: How in tarnation did two 5kw fulltimers on 980 get
licensed so close??? Bill]

In article <1993May26.070709.18102@gagme.chi.il.us> hhallika@tuba.calpoly.edu (Harold Hallikainen) writes:
All this discussion of "micro radio" makes me wonder how it would be if the FCC set aside a couple FM frequencies that were license free with somewhere between 1 and 10 watts (perhaps with limits on ERP and HAAT, but maybe not). People would be free to use these frequencies on an interference accepted basis. <...deletia...>

Yeah, but would anybody listen? It sure seems to me that people think about radio like they think about the electric company: who cares who provides the service, as long as it's there whenever you want it and there are no surprises. Existing community/college/noncomm stations don't have the consistency (read: blandness) to attract the listeners of your basic "Magic 101, playing the most continuous lite rock favorites from yesterday and today." So, at one watt, or even ten, how many people in your neighborhood would be actually motivated to tune in? Back in college, I ran a 160-watt ERP FM. There were times we wondered if *anybody* was listening. And we covered most of town! We had diverse but music-intensive programming (alternative and metal being the big two, with miscellaneous "classic rock", jazz, classical, and even bluegrass shows). People would call and complain when we'd switch gears among them. Their public utility suddenly sent a surprise down the wire, you see. Our broadcast hours didn't encourage listenership, either: at midnight, we'd power down, and all of our listeners would go elsewhere. Next morning, they'd wake up with their radios set elsewhere. Heck, if they woke up before 7 am, they couldn't listen to us anyway.

[Moderator's Note: <...deletia...> Low end FM (college and educational) stations are sandwiched in so tight that when one goes off the air (like at midnight) the co-channel 100 watter from halfway across town blares over the air monitor of the station signing off! I have seen this happen several times. So where would we put these stations? Don't get me wrong, I'd love to see them, but in todays climate, I highly doubt it. Bill]

Maybe not in Chicago, but here in Terre Haute, Indiana (or, pick your favorite small market), the band is far from crowded. We have two college stations (88.7 and 90.5), and commercial stations at 97.7, 99.9, 100.7, 104.3, 105.5, and 107.5. Plenty of room. (Well, except that the station at 99.9 bleeds all over the dial, interfering with the weaker stations. :( )

You know, not too long ago every burg had a community *commercial* station that the whole town listened to, identified with, rallied 'round. It was usually the pioneer AM in the area, doing a basic full-service/MOR format

with lots of news and boring music and ... the important element ... items of "community interest". Growing up in the '70s, my family listened to the one in my hometown all the time. Believe it or not, it helped us feel rooted in our community. Maybe this is what your idea, Harold, is behind "neighborhood radio", to have a community-strengthening station again. I'm skeptical, because people seem stuck on stations thatprogram "thirty minutes of non-stop rock" or "your continuous country favorites" or...

Harold

This is a kick. The stations I currently work for (WBOW/WZZQ Terre Haute) have H/F (Hallikainen & Friends) digital readouts on our old (RCA) remote xmitter controllers.

It's neat to know that there's really a Mr. Hallikainen, and that he reads r.r.b!

I had though that the FCC had a rule saying that radio station callsigns
in the same or nearby markets had to be sufficiently different that the
general public would not confuse one station with another. Was this
a rule or policy, and did the FCC drop this?

---

>from: fishbein@shark.gsfc.nasa.gov (Jeff Fishbein)

What happened to the FCC's policy of allowing stations in the immediate
market to protest? When I was a college student, our station, WQSU, was
asked by the FCC if we had any objection to a nearby station being awarded
the call "WSQV" (we objected, but the FCC overruled).

It seems to me that if the FCC has allowed the Greater Media station to use
the call WBCS, then Infinity is pissing into the wind ... probably just
looking for the free publicity.

# 748. New radio in El Salvador

Newsgroup: rec.radio.broadcasting
Date: 1993-06-03 02:35:32 UTC
From: resystom@web.apc.org
Message-ID: <1993Jun3.023532.6186@gagme.chi.il.us>
Source record: 43236

Canadian solidarity workers support the first new community radio station in post war El Salvador
==========

The World Association of Community Radio Broadcasters (AMARC), based in Montreal, and its Salvadorean partner, la Fondacion Comunica, are coordinating the establishment of Radio Sumpul, the first community radio station in El Salvador since the end of the civil war.

Radio Sumpul will serve a population of approximately 400 000 people in the regions of Chalatenango, Cuscatlan and Cabanas, in the north of El Salvador.

This region was heavily impacted by the war. Recently, there has been an influx of people into over 60 communities who used to be refugees or displaced people. It is these people and popular organisations which will participate in the management and programming of Radio Sumpul.

The Radio Sumpul studios will be installed in Guarjilla, a community in the north of El Salvador, in June. The station will go on air towards the month of August, 1993. In July, a team of trainers from Canada and Central America will offer training workshops to the future production groups of Radio Sumpul.

Many groups have helped in the realization of this project: the Reconstruction and Rehabilitation Fund of the Canadian Council for International Cooperation, Oxfam Canada, the social justice fund of the Canadian Autoworkers Association (CAW) and other unions, organisations, and individuals.

In a country destroyed by 12 years of civil war, in which over 75 000 people died, community radio will facilitate the expression of the civil society. As an instrument of popular participation, the people of this region will be able to use the station to construct a society founded on social justice and the respect of the existing Peace Accord.

A concert in support of Radio Sumpul will be held in Montreal, Saturday, June 5, 8:30pm at 1710 Beaudry.

Hello! Anyone from Philly who listens (or should I say used to) to Eagle 106? Since the departure of John Lander and the morning Nuthut, *AND* the Eagle station chaging formats to smooth jazz, Philly radio has been pretty depressing. I'm currently listening to Y100, but it's not superb. Anyone heard any news about Lander or any comments on Philly radio?

I know this probably isn't the right place to post this, but I don't know where the right place would be at this time. I am a graduating senior broadcasting major currently attending Cedarville College in Cedarville, Ohio. I am looking for a job in broadcasting in sales, production, or on air work. I have worked for the college station for three years, so I have some experience. I would prefer living in the northwest (Washington, Oregon, Idaho, etc...), but I am willing to go whereever the work is. Here is the catch. I wouldn't be able to start until September because I am a part of a college singing team that is traveling to Australia from july 10 to August 17. I am willing to start as an Intern if necessary. If you are interested, I will send you a resume. Please do not reply via E-Mail, as I will finish here on June 5th and will be traveling home, thus I would not get your reply. My home address is 41918 Lynch Creek Rd. E. Eatonville, Wa 98328 If you could help me out please send any info you might have to that address. I would give the phone, but that probably isn't wise on a nation wide post. Thanks for your time. Justin Van Eaton

# 752. Stern/KEGL; Changes at KILT-FM, KPEZ

Newsgroup: rec.radio.broadcasting
Date: 1993-06-03 02:41:32 UTC
From: "Chip (C.D.) Kelley" <chipk@bnr.ca>
Message-ID: <1993Jun3.024132.6512@gagme.chi.il.us>
Source record: 43241

Some Texas notes...

The Saturday (5/29) DALLAS MORNING NEWS reports KEGL midday DJ Pamela Steele quit Friday morning over a KEGL Howard Stern promotion stunt. Friday morning had female Eagle staffers parading around in Howard Stern boxer shorts and sport bras in front of a bunch of happy men to perk up Stern's falling ratings. Steele, apparantly disgusted by this, left a resignation note and was not on the air for Friday midday and Sunday afternoon shift.

Steele was the longtime midday voice of KZPS-92.5, and one of D/FW's Better DJs. Big Eagle loss IMHO.

Houston's #1 radio station, country KILT-FM-100.3, has moved to hot country "FM100, Today's New Country Hits." Both KILT-FM and rival country KIKK-FM-95.7 experienced a ratings tumble do to hot country KKBQ-92.9/790 "93Q Country, Houston's Fresh Country Hits." KKBQ is now only about a 1.0 behind KIKK-FM. KIKK-FM's TV ads promote the fact that they play new and old country, and that they are now the only FM in town to do that. (KILT-610 "610 Rodeo Country" and KIKK-650 both are classic country stations).

Austin's AOR KPEZ-102.3 "Z102, Austin's Album Rock" has moved back to classic rock "Z102, THE classic rock station."

Chip
chipk@bnr.ca

## 753. "Radio Free Moosehead" and "Why Ask Why?" radio mentions

Newsgroup: rec.radio.broadcasting
Date: 1993-06-03 02:41:46 UTC
From: wa2ise@netcom.com
Message-ID: <1993Jun3.024146.6537@gagme.chi.il.us>
Source record: 43240

Heard a radio commercial for Bud Dry, the "Why Ask Why?" series, this one discussing radio stations. "There are ten thousand stations, so why do all the DJs sound the same? And why all the gimmicks? 'win a car every hour' win a Canadian province' 'be the first air gutarist in space' And why do they all play the same song? (sound of someone pressing buttons on a car radio, and getting the same song) "While you search for that perfect format, your search for the perfect beer is over". 'Less talk, more Polka' Radio station style jingle "Amhiser(sp) Bush, St Louis"

Cute, but maybe there is the faint hope that it might make some PD somewheres think of a new wrinkle in programming, like that suggestion of the 30000 song oldies station (you'd have to order the entire Rhino catalog for that!). Sure.

"Radio Free Moosehead" sounds like as if it is supposed to sound like a pirate radio station, with the faint squealy sounds you sometimes hear with older short wave radios. "Interrupting all broadcasts, this is Radio Free Moosehead. .....". Well, the commercial IS interrupting a music (or whatever) broadcast. "News and views of Moosehead beer".

These can be sort of fun to hear, instead of the usual painful commercials.

>I have just bought one of these, returnable of course, at my local
>Home hardware. The date code is 2229C. On this newsgroup, reports
>of sensitivity problems were circulated for models with a number
>earlier (lower) than x341. Does this apply too to the Canadian
> ...

The whole point of the SRIII sensitivity was summed up in an blurb in the May _Monitoring Times_, which was re-posted to this newsgroup as well as rec.radio.shortwave. This applies to units sold by Thomson in the USA, but I'd bet the Canadian units come from the same assembly line at the same factory.

SRIIIs with serial numbers lower than x341 have the *potential* of being less sensitive than those with higher numbers. It is not a given fact that every single radio with the lower numbers is a bad unit.

As pointed out in the _MT_ article, if you have an SRIII with the sensitivity problem, you'll know it right away since it's very noticable.

Since you stated in the first line of your article that the unit is returnable, I suggest to use it as long as you can, and if it works, there's no problem. In these newsgroups, we use a lot of bandwidth talking about theory and why something "should" or "should not" work (I am guilty of this myself); we often lose sight that the proof is right in front of us: if something works, it just *works*, so enjoy it.

# 756. UK Student Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-06-03 02:49:07 UTC
From: Nick Piggott <PNA@fs2.ee.umist.ac.uk>
Message-ID: <1993Jun3.024907.6866@gagme.chi.il.us>
Source record: 43245

Having seen the discussion on UK student radio, I thought I'd add my ha'pennyworth.

I'm the station manager of a station called MCR100fm, based in Manchester, England, which has the highest number of students in Western Europe all crammed into the city centre. Our combined campus numbers are about the same size as a US state campus.

We originally looked at AM induction loop broadcasting, but with over 100 square miles of campus, and 40+ halls of residence, it was technically impossible.

With the advent of UK Restricted Service broadcasting, we began using FM transmission, for 24 hours a day, but for only two months of the year (October and March). The response to our service was terriffic! Despite using the ultimate in bodged gear, cobbled together in weeks, and having next to no publicity, we were regularily reaching 40,000 people a week, about 5% of the listening public. All this using just 15W of FM stereo, 10metres (ahem!) above the ground.

Subsequently, the Radio Authority has invited us to apply for a full licence for Greater Manchester, broadcasting to 1.1m people. We will be offering a similar service of young dance and independent music, along with 'classic' hits of the 70's and 80's, and we are very confident of getting the licence.

The opportunities for student radio are here in the UK, but you have to be prepared to play on the same level playing field on your competitors. I have very little time for student radio stations who want prime FM frequencies for 9 months of the year, and pay next to nothing for them (or the music copyright).

As a postscript - we are trying to form links with US Student Radio stations, possibly with a view to programme syndication. If you are interested, you can mail me either as:

PNA@fs2.ee.umist.uk.ac

or by snail to:

MCR100fm
PO Box 100
MANCHESTER
M13 OQB

I await your replies!

Keep smiling
Keep listening
** Nick **

>If that's indeed the case, it's quite a shame.
>

As I recall, the class D stations were only licensed as NCE
stations, and were indeed licensed, with interference protection, etc.
My proposal was to not even license them, or protect them from
interference, just make "neighborhood radio" legal. It may not be
economically feasible, but that is up to the station owners to decide.
There was some discussion a while back about allowing FM
translators to originate programming, making them comparable to LPTVs,
which are just translators that originate programming (and are licensed
under part 74 of the rules, instead of part 73, where broadcast stations
are licensed). One of the arguments against that was getting efficient
use of the spectrum. As a station's power goes up, the area it services
is a larger portion of the area it interferes with, so a larger area
gets radio service. On this basis, we'd just run a bunch of full power
stations in the center of the continent. No interference, but no local
service. The mix of high and low power stations we now have is a
compromise in the spectrum efficiency versus local service balance.
One possibility for neighborhood radio would be the spread
spectrum allocation at about 900 MHz in part 15. We could get started
in license free digital radio broadcasting. As I recall, stations are
allowed something like 1 watt, and the antenna can have a maximum gain
of something like 3 dB over a dipole. Anyone wanna start another
broadcast band?

Harold

>100mw into a 3 meter antenna! Also realize that your range will be measured
>in feet, not blocks or miles. Better off trying low power FM. Bill]

As pointed out by Andrew in his posting, part 15 DOES make
an allowance for AM broadcasting on educational campuses that allows
more than 100 mW into three meters. 15.221(b) considers the entire
campus to be the radiator and therefore sets the limits of 15.209
AT THE CAMPUS BOUNDARY. The power or field strength in the AM broadcast
band ON THE CAMPUS is not limited. At the campus boundary, the normal
24000/F microvolts per meter (with F in KHz) field strenght limit
applies.

[Moderator's Note: Gee, could i have made a mistake??? First time this
year! :-). Bill]

It depends on how well, run, how well marketed, and how well received your college station is. I volunteer at WQSU-FM, Selinsgrove, Pa., a 12kw non-comm owned by Susquehanna University (yes, like Abbot & Costello's hat co) that plays rock (AOR), metal, alternative, jazz, classical, show tunes, talk/education, and country -- all at predefined times. The audiences for the various programs range in size, but all are loyal. They even stay around when we go to summer hours (noon-midnight), or turn to us when we sign on (I've gotten calls within seconds of the transmitter coming up).

When do they run into trouble? The biggie is, consistent hours. If they go down at 6 or 9 p.m. a few nights the same week, everybody turns to the commercial competition. If a jock gets on the air who is REALLY #*&%ing bad, that dial's a changin'. And if they play the wrong music at the wrong time (show tune during a rock show, e.g.), goodbye audience. Other than that, the audience doesn't seem to care that the announcers don't have slick voices and slick sayings written by slick consultants -- take away the program, though, and they're miffed.

I realize, of course, that I would not be able to pump the full 10W
into the element. There is an "output gain" pot on the xmtr. Still, I
am talking about a reasonably large campus, with the desired coverage
area in a relatively small portion of it. I'm not convinced that CC is
a better alternative.

I noticed an ad recently for Radio Systems' free radiated AM system.
Comes with everything. Plug 'n' play, so to speak. (Well, you presumably
need proof-of-performance paperwork to justify your existence.) When I
called them, they were remarkably optimistic about the propagation of
such a system in my situation. (Especially after I told them how close
I was to replacing about twenty LPB CC xmtrs... I've lost faith in LPB
and RS now...)

I tried LPFM. 250uV @ 3m ?!? Talk about a useless signal...

A visionary thing, indeed. But I fear you've gone too far in the opposite direction of today's limited playlists.

First problem is, you have to keep in mind that people who listen to pre-1953 rockroot music, or the standards that were more popular in the late '40s, are generally not going to listen to a radio station that plays Beatle-era rock and roll, and vice versa. I worked for a station that tried playing just the era you visioned, with a library of about 2-3 thousand songs (as you know, that's pretty damned big compared to modern radio). Only by reducing the scope of years were they able to continue to hold a reasonable audience.

Likewise on 30,000 songs -- remember, a bad song can kill anyone's state of mind. And you'd be sure to have some dogs in a rotation that large. Besides, 8-day turnaround? At a nominal 16-unit hour (realizing that with oldies, you may average 18-20 units/hr), you'd be barely more than 10% of the way through your rotation in 8 days.

Today's broadcasters are (and should be) faulted because they reach for nothing less than the lowest common denominator -- the bottom of the pyramid. But I don't think a radio station focused on the pyramid's tip would be a viable enterprise, either.

Jeff Fishbein

>The music would emphasize the songs that never get airplay anymore. For

I assume you're talking about doing this commercially. Here's how I think you might get away with it:

1. Forget FM. Find a loser AM station, preferably one that already programs oldies.

2. Think *stages*. You probably won't find a station owner willing to take a chance on an unproven concept, and I think you'll find listeners to be more resistant to this wide a variety than you might think. So start by playing the same major hits the other oldies stations play, but only the good ones (you seem to have a pretty good handle on what's good & what sucks), with a *few*

earn their trust, and the best way to do that is to show that *within the music that they're familiar with*, you can tell what is good.

3. Be *very* careful about how you present the music on the air. IMHO it is a big mistake to try to yell & scream like 60s Top 40 jocks, as I hear so many oldies stations do. First of all, there's a *reason* why jocks don't sound like that anymore. Secondly, the guys you'll be able to afford won't have the talent to pull it off. Never forget that the *music* is the star of the show. Frankly, I think that probably the only viable low-budget route is a mostly-automated setup. Now I know this goes against everything you've ever learned in college radio, but this is exactly the kind of format that can be done well with automation (at least in most dayparts) - and it will *never*, IMHO, work with the kind of young, raw talent you'll be dealing with.

So put your energy into production, research, planning, promotion, and the other *really* important stuff.

>
>This station would be a success because the musical sounds (I emphasize
>sounds) would be familar. It would be that instead rotating the same 300
>songs (from "Poor Side of Town" to "My Girl"), we would air non-repeatable
>30,000 plus songs and ironically these songs (or at least the MUSICAL
>SOUNDS) would be something folks would recognize. Suddenly, oldies radio
>would become very refreshing. People wouldn't get bored but fascinated
>instead. It would be the music we grew up with, only this time AT LEAST
>MOST OF IT!!!!

Again, *grow* toward your goal of having 30,000 songs on the air. Add them into the mix a few at a time. Make *sure* that they are equal in quality to the established hits. *Talk* about them, *educate* your audience as you go along. Don't assume that everything from a given era, genre, artist, etc. is worthy of airplay.

I hope you get a chance to pursue your dream. This business needs more folks like you who are willing to say "wait a minute! I've got a better idea!"

By the way, I've been successfully bucking trends & breaking rules on the air for over 20 years now. It *can* be done!>

Here in Los Angeles, we have at least *three* sets of dual-frequency
simulcasts:

540 (Orange County) and 1260 (San Fernando), with an easy-listening/adult
standards format

670 (Simi Valley) and 690 (San Diego/Tijuana) with an all-sports format

830 (Santa Ana) and 850 (Thousand Oaks) with "Radio Aahz", oriented to
small children

On FM, we have two sets, but they both use synchronized transmitters on
the same frequency. Two stations (Santa Monica and Huntington Beach)
operate with a0!0a jazz format on 103.1; another pair of stations
(Inglewood and Riverside) broadcast urban contemporary on 103.9

## 766. Administrivia: New IRJ features coming!!!

Newsgroup: rec.radio.broadcasting
Date: 1993-06-04 06:09:00 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <1993Jun4.060900.28782@gagme.chi.il.us>
Source record: 43103

Greetings rrb and IRJ readers;

Plans are underway to improve and automate parts of the operation of the Internet Radio Journal (IRJ), the email version of rec.radio.broadcasting (rrb).

Soon, if all goes well, there will be an automated server installed at our archive site (deja-vu.aiss.uiuc.edu) which will handle subscribe - unsubscribe requests, help requests, and offer email access to the most recent (and perhaps all) of the IRJ archives. This last service will be of great help to those without direct FTP access. Initially, the server will offer the most recent 20 issues of the IRJ via email, with the other 200+ issues available, as usual, via anonymous FTP.

Articles will continue to come to the current address which is ... rrb@airwaves.chi.il.us, but the automated mailing and handling of subscription traffic will certainly speed things up. Plus, since deja-vu is on an Internet backbone, Journals should be in Internet mailboxes within seconds, or at the most... minutes, after being mailed.

Everyone will be informed of when and how this thing will work. My consultant is currently compiling and editing the necessary files. If his previous projects are any indication, this will be a smashing success.

Until that time.... Archives are available via FTP from deja-vu.aiss.uiuc.edu in the directory /misc/rec.radio.b-cast. There is an INDEX and README file for first time users. Journals are seperated into sub-directories by issue number.

We now return you to your regularily scheduled newsgroup!!!!

Bill

/* ---------- "PACIFICA RADIO ARCHIVE" ---------- */

THE PACIFICA RADIO ARCHIVE
3729 Cahuenga Blvd. West
North Hollywood, CA 91604

(800) 735-0230

The Pacifica Radio Archive is the oldest collection of public radio programming and sound actualities in the United States. It includes over 40,000 recordings made by programmers at Pacifica's five stations -- KPFA Berkeley, KPFK Los Angeles, WBAI New York, KPFT Houston, and WPFW Washington, D.C. -- and by independent producers throughout the United States.

As one of the last bastions of free speech broadcasting, Pacifica has aired programs of singular historical and educational value, programs of people, issues, and events that are under-represented in commercial media. The five Pacifica stations and the national news bureau, Pacifica Radio News, have won numerous distinctions for excellence. And the archive continues to be extensively used by colleges, universities, libraries, and individual scholars, as well as non-commercial radio stations who broadcast its material.

Tapes of John Stockwell, Helen Caldicott, Noam Chomsky, Martin Luther King, Jr., Bertolt Brecht, Maya Angelou, Michael Parenti, John Trudell, Langston Hughes, James Baldwin, Rosa Parks, Thomas Mann, Philip Agee, Angela Davis, Paul Robeson, Dalton Trumbo, Malcolm X, Steven Biko, Agnes Varda, Dick Gregory, Erich Fromm, and many, many more are available from the Pacifica Radio Archive.

FOR MORE INFORMATION CALL TOLL-FREE (800) 735-0230.

Source record: 43106

I'm typing this from Anderson, S.C. and I cannot believe what I've
just heard. While out at lunch I listened to Z-93 fm in Amarillo (sp?)
Texas ????????? and some other station with "K..." call letters.

What's going on? Is there some kind of weird atmospheric thing going on
today or what?

The station from Amarillo was actually breaking up the signal from a
100,000 watt fm local station. Jeeeeees, how much power would you
have to be using to get from Amarillo, TX to Anderson, SC on an fm
broadcast at 93.1?

Am I just way off here? Or, is this truly bizarre?

Now we are getting KGLS in the Midplains area (don't know where that is
[Missouri maybe] but we should'na be getting anything with a "K" prefix here.

Any comments?

Anybody know anything about 93.1 fm Amarillo?

Terry
terryw@clemson.clemson.edu

# 769. New Communications Oriented Radio Show

Newsgroup: rec.radio.broadcasting
Date: 1993-06-04 06:13:47 UTC
From: askspectrum@attmail.com
Message-ID: <1993Jun4.061347.29033@gagme.chi.il.us>
Source record: 43107

Announcing the creation of Spectrum, a new international communications and technology radio program. Spectrum will air Sundays Beginning June 13 at 0335 UTC via WWCR Nashville, Tn USA (7435 Khz) and the Let's Talk Radio Network (Spacenet3 Transponder 21, 5.8 Mhz Sub carrier Wide Band Audio). The program will feature produced segments on all aspects of communications from DC. through Light! In addition, there will be a live phone in segment with guests from the communications scene. The program will be hosted by Dave Marthouse, a long time radio enthusiast and professional broadcaster & Mark Emanuele a professional communications consultant. Spectrum will be underwritten by Holmdel, NJ based Overleaf International, a Data Processing and Telecommunications Consulting Firm. Spectrum will originate from studios at Overleaf's Holmdel, NJ Corporate HQ.

The first show on June 12'th will feature a live call-in with most of the Spectrum feature producers. You will be able to take part via the phone and a special 800 number that will be announced during the program. Listeners will be able to talk with the guests in real-time. The 800 number will be usable throughout North America. Listeners in other parts of the world will be able to call in via standard IDDD. Calls from outside North America will be payed for by the calling party. At this time we can't support international 800 calls.

In addition if you are on the GEnie on-line service you will be able to send your questions etc. to the show in real-time while it is on the air. More info will follow as broadcast time draws near.

The Spectrum e-mail addresses are as follows

Internet: askspectrum@attmail.com
GEnie: Spectrum

## 770. Toronto All Hits CFTR to go All-News

## 771. Station changes in Ottawa and Toronto

Newsgroup: rec.radio.broadcasting
Date: 1993-06-04 06:14:33 UTC
From: aa422@freenet.carleton.ca
Message-ID: <1993Jun4.061433.29102@gagme.chi.il.us>
Source record: 43110

* CFRA AM-580 Ottawa, Ontario will be dropping their weekday music programming starting Monday, June 7th in favour of a talk-radio format. The change had been expected by other stations in the 19-station market for some time. CFRA already carries the Larry King Show, Ottawa Rough Riders Football, Ottawa Senators Hockey, Ottawa Lynx AAA Baseball, and Montreal Expos Baseball; at other times, they played solid gold, with the traditional hourly news reports. CFRA will still play solid gold on the weekends, but the music will eventually be phased out on the weekends as well. Starting Monday, CFRA's weekday schedule will include a talk show from 9:00am to noon, news from noon to 1:00pm, and a current affairs and lifestyles program from 1:00pm to 3:00pm. CFRA is owned by CHUM Limited of Toronto. (Some information from "CFRA makes move to talk-radio format", The Ottawa Citizen, page B6, June 2 1993)

* Also on Monday, all-hit radio station 680 CFTR Toronto, Ontario will be changing its format to all-news. The station, owned by Rogers Broadcasting, will be called 680 NEWS, and will cycle through the news, weather, etc. every 20 minutes. 680 NEWS will be Canada's first all-news station since the CKO Network shut down in November of 1989. The announcement of 680 NEWS was unexpected; it has been thought for a long time that Standard Broadcasting's CFRB AM 1010 would become the all-news station in Toronto, but it looks like CFRB will go the way of CFRA's talk-radio format.

* Standard Broadcasting has applied to move their Ottawa radio station 54 Rock (CJSB AM-580) to CKO's old frequency of 106.9 on the FM band. The application by the classic/hard rock station is expected to fail if a similar application by British Columbia station 1080 Coast is any indication. The CKO frequencies are very valuable because most CKO cities have no other FM band space left. It appears that the CRTC wants new all-news stations to fill those frequencies. But perhaps now that CFRA is going talk-radio, 54 Rock will have a fighting chance to become Rock 107 (or whatever).

* Finally, the Bureau of Broadcast Measurements (BBM) ratings will be coming out tomorrow. It will be interesting to see how the recent changes in the Ottawa and Toronto markets will come out in the ratings.

## 772. Hit Radio 680 CFTR,Toronto, going all news

Newsgroup: rec.radio.broadcasting
Date: 1993-06-04 06:18:40 UTC
From: aj008@cleveland.Freenet.Edu
Message-ID: <1993Jun4.061840.29268@gagme.chi.il.us>
Source record: 43113

After 25 years of hit radio on 680Mhz, yet another fine AM statio
n is making the change to all news.

CFTR in Toronto, a 50kW powerhouse, comes in very nicely here in
Cleveland, Ohio. I have a personal attachment twoard this nice hi
t AM operation.

For those of you interrested, they are currently(5:36 PM EDT,6/3
/93) having a top 500 of the past 25 years countdown.

The format change will officially occour Monday at 6:00 AM.

I am not aware if they are going to have a call letter change or
not.

All the US boxes I've seen have date codes ending in "C". Perhaps a factory ID ... in any case they do not appear to mean "canadian". Before deciding on returning it, why don't you check out its sensitivity.

## 775. Introduction to rec.radio.broadcasting

Newsgroup: rec.radio.broadcasting
Date: 1993-06-04 06:21:09 UTC
From: <>
Message-ID: <1993Jun4.062109.29432@gagme.chi.il.us>
Source record: 43114
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Greetings:

Rec.radio.broadcasting (r.r.b) is a Usenet newsgroup which
was founded in April of 1992, in order to provide a forum for
discussion of topics pertaining to 'domestic broadcast radio'.
Already in existance was rec.radio.shortwave, which centers around the
International radio scene, and rec.radio.noncom who's focus is,
obviously, non-commercial radio. Rec.radio.broadcasting was intended
to 'fill the gap' between these groups.

The Internet Radio Journal is a periodic email digest consisting,
mainly, of articles found in the newsgroup. It is intended for people
who either cannot access the newsgroup from their system or for some
reason perfer a digestified format for reading. Subscriptions to IRJ
are free, and available to anyone who wants one, and who is equiped
with some form of email service.

-=*=- DOMESTIC BROADCAST RADIO -=*=-

By domestic, we mean broadcasts which are intended, primarily,for
reception in the same country/nation in which they originate. R.r.b
is an international newsgroup, though, and the term 'domestic' should
not be taken to imply 'USA' or even North American. Readers in other
nations are encouraged to participate.

-=*=- SUBJECTS -=*=-

If it has to do with broadcast radio, and not _specifically_ international
shortwave, it is welcome here. Occasionally an article which IS
primarily about shortwave will be posted if the subject seems broad
enough that the readership of r.r.b might be interested, or be able
to assist the poster in some way.

Generally, if a subject 'seems' like it would be of interest to the
broadcasting community (which includes those involved in creating,
transmitting or listening to broadcast radio) will be published.
These subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters and interests.
3) DXing (long distance reception) on the standard broadcast bands
4) Community broadcasting (including non-commercial and clandestine stations)
5) Pirate broadcasting (especially non-shortwave, domestic pirates).
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.

9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.
13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

-=*=- POSTING -=*=-

1) Post to rrb as you would any other Usenet group. The software does the rest.

2) Email your article directly to rrb@airwaves.chi.il.us. Using other addresses to post will needlessly delay your article. You might consider installing an alias in your mailer for emailed articles, especially if you post a lot of stuff. See the end of this file for all applicable addresses.

-=*=- POSTING GUIDELINES -=*=-

* If you post a question that is of potential interest to others in the group, ask that replies be posted, instead of emailed to you. We all would like access to the answers.
If you do receive email replies, post a summary to the group. This forum is only as good as it's posters and readers. Keep the info flowing.

* If you email an answer to a question, send a Cc: to the group's submission address, rrb@airwaves.chi.il.us, so we can all learn from your knowledge. When id doubt... POST POST POST! :-).

* PLEASE edit quoted text to a minimum! Most users of this group are fairly regular readers and do not need, or want, to read the entire text of a recent article in every reply. Of course, if the thread is less current, more quoted text may be appropriate. Use your brains (and your editor :->).

* If your message is basically a one or two line "Me Too" or "I disagree" post, consider emailing it to the poster. However if you go into some details as to WHY you agree or disagree, then please post it.

* If you are replying to an article in the Internet Radio Journal, simply use your mailer's reply feature, and again, edit the text to ONLY the article you are replying to, and include the article's name in the Subject field. Subjects of "Re: Internet Radio Journal" are confusing and may result in needless delays.

* If you post about a local radio station or personality, realize that 95% or more of the readers will know little or nothing about it. Offer a little background, like location, station format, type of

music played etc.

* Last but not least, avoid flames and personal insults. R.r.b has a high percentage of broadcast professionals among it's readers. We try to maintain a reasonably high brain to bulls*it ratio here. It is perfectly fine to say "I think that what you said is the stupidest bunch of crap I have ever heard", instead of "YOU are the stupidest jerk I have ever heard". If you *must* make personal attacks, do it in email.

-=*=- MODERATION -=*=-

R.r.b is a _very_ loosely moderated group. Normally, all legitimate articles will be posted to the group. Matters that may cause an article to be rejected by the moderator include...

---

* Articles which are not on (or reasonably near) the stated charter and scope of the group (domestic radio broadcasting) or pertain to 'non-broadcast' radio services, such as cellular, two-way, ham, citzens-band, and such.

* Articles that are too long for submission as-is. If your article is longer than 10k (10,000 bytes), consider splitting it into two parts, or better yet, edit it down to a more reasonable size. Check to see if you can eliminate any quoted text. If you believe that your article is of an especially urgent or inforamative nature, and you also feel that you cannot reduce the size without damaging the content, let me know and I will try to work with you.

* Articles which are merely multiple repetitions of an identical answer which has already been offered several times. Often these will be bundled together into a single article to conserve bandwidth and increase readability.

* Articles which contain 'miles' of quoted and multiple quoted text followed by a few lines or less of original text. Please edit quoted text to a minimum and try to adhere to the *50% rule*, that is 51 (or more) percent of original text to 49 (or less) of quoted text. If the thread is not curent, more quoted text is appropriate. Only the worst offenders are omited, usually I will edit quoted text myself, when I have time.

* Articles which are unwarrantedly offensive, abusive or contentious for the sake of contention. Personal attacks and ridicule are considered such. Discussion, even argument, of issues and opinions are welcomed and encouraged. Flame-wars and such are not. We have discussions here, not shouting matches.

Note: Since most articles are used, we do not send out confirmations. If your article *is* rejected, you WILL receive a note explaining why the action was taken. If you do not receive such a note, and you do not see your article in the group, notify the moderator at once and include a backup copy if you have one.

-=*=- ARCHIVES -=*=-

Archives of past Internet Radio Journals are kept for anonymous FTP at deja-vu.aiss.uiuc.edu . They can be found in the directory /misc/rec.radio.b-cast. In that directory you will find a file called INDEX, which contains the issue numbers of all Journals, and the title of each article contained within. The archives are updated every week or so. If you need help with FTP, write me.

The Journals are arranged in sub-directories of about 100 issues each, and are in compressed (.Z) format. Remember that compressed files should always be sent using the "binary" mode. If you have trouble with anything, or if you have any questions about the archives, send email to rrb@deja-vu.aiss.uiuc.edu. If you appreciate the archives, send your notes of appreciation to the site admin, C. Lance Moxley <lance@deja-vu.aiss.uiuc.edu>. He has been very gracious in his willingness to store our archives on his machine.
*Please do not bother the system admin with problems, direct those to me.*

-=*=- ENJOY THE GROUP! -=*=-

I hope you enjoy the group. Remember, it is only as good as it's contributors. So don't be shy :-). If you have a question, or answer, even if you are not sure, post - post - post.

I am open to suggestions on how to improve this group. Send them via e-mail to wdp@airwaves.chi.il.us -or- rrb@deja-vu.aiss.uiuc.edu.

Thanks to all who have, and continue to, participate.

We now return you to your regularly scheduled newsgroup :-).

# 776. UK Student Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-06-04 06:22:13 UTC
From: Nick Piggott <PNA@fs2.ee.umist.ac.uk>
Message-ID: <1993Jun4.062213.29479@gagme.chi.il.us>
Source record: 43115

Having seen the discussion on UK student radio, I thought I'd add my ha'pennyworth.

I'm the station manager of a station called MCR100fm, based in Manchester, England, which has the highest number of students in Western Europe all crammed into the city centre. Our combined campus numbers are about the same size as a US state campus.

We originally looked at AM induction loop broadcasting, but with over 100 square miles of campus, and 40+ halls of residence, it was technically impossible.

With the advent of UK Restricted Service broadcasting, we began using FM transmission, for 24 hours a day, but for only two months of the year (October and March). The response to our service was terriffic! Despite using the ultimate in bodged gear, cobbled together in weeks, and having next to no publicity, we were regularily reaching 40,000 people a week, about 5% of the listening public. All this using just 15W of FM stereo, 10metres (ahem!) above the ground.

Subsequently, the Radio Authority has invited us to apply for a full licence for Greater Manchester, broadcasting to 1.1m people. We will be offering a similar service of young dance and independent music, along with 'classic' hits of the 70's and 80's, and we are very confident of getting the licence.

The opportunities for student radio are here in the UK, but you have to be prepared to play on the same level playing field on your competitors. I have very little time for student radio stations who want prime FM frequencies for 9 months of the year, and pay next to nothing for them (or the music copyright).

As a postscript - we are trying to form links with US Student Radio stations, possibly with a view to programme syndication. If you are interested, you can mail me either as:

PNA@fs2.ee.umist.uk.ac

or by snail to:

MCR100fm
PO Box 100
MANCHESTER
M13 OQB

I await your replies!

Keep smiling
Keep listening
** Nick **

# 777. Radio Station CD's

Newsgroup: rec.radio.broadcasting
Date: 1993-06-04 06:22:24 UTC
From: gst@gagme.chi.il.us
Message-ID: <1993Jun4.062224.29501@gagme.chi.il.us>
Source record: 43116

Saw this in REC.MUSIC.CD and I thought that readers here would find it of interest.

---

>from: jclouse@discover.wright.edu (Jim Clouse)
Organization: Wright State University

Here in Dayton, a local Radio station, WTUE, produces some CD's containing classic rock, about 5 CD's worth. They sell for about $12, or sometimes they give them away.

Are there any other stations out there who do this?
I am interested in classic rock mostly.

Thank You

--
GEORGE S. THURMAN (312) 509-6308 gst@gagme.chi.il.us

## 778. Detroit's 99.5 FM goes from talk to "young country" (fwd)

Newsgroup: rec.radio.broadcasting
Date: 1993-06-04 06:22:48 UTC
From: kaplanj@emunix.emich.edu
Message-ID: <1993Jun4.062248.29544@gagme.chi.il.us>
Source record: 43119

99.5 FM used to be "The Fox" which my 1990-91 college room mate listened to a lot. I think it had a lot of rap and such popular music. I think they became WOW-FM about 6 months ago. Traffic and weather every 10 minutes, talk and call-ins on a wide variety of serious and fluffy topics, described as a 24 hour morning zoo without the music. I understand that WOW-FM was ranked 22nd in the market with about half the listeners that the old Fox had. They dropped Fox and went to all talk because Fox didn't have enough listeners. So it shouldn't be too big a shock that they've changed formats again.

I called into WOW-FM for the first time on Friday. They asked my age and zip code. I assume that they wouldn't bother collecting such data if they were planning to dump the format. Hm. I didn't listen on Saturday or Sunday, and I couldn't seem to find it this afternoon.

I didn't hear any call letters. They're calling it "Young Country" which means that they are not going to bore the young listeners with old style country such as Johnny Cash. I think WWWW 106.7 FM is Detroit's only other country station, so I can believe that 99.5 will have an easier time competing against it than last week when it was up against WJR, the number one station in the market, and half a dozen other talk stations....

I couldn't find anything about the change in the Sunday paper. Is it common for low-rated stations to spring surprise format changes on the audience?

And while I've got the attention of you folks who care about Detroit area radio: Where can I find Larry King on afternoons like this one? WTKA pre-empted the show for basketball or something. Almost as dull as the college baseball game that was on WTKA a few weeks ago....

And if you're still interested in that article from the Detroit Free Press two weeks ago about talk radio, you'll have to ask Mr. Fybush about it. I sent my copy to him late last week. Perhaps he'll be able to OCR or type it in.

## 779. Glasnost on Private Radio in Russia

Newsgroup: rec.radio.broadcasting
Date: 1993-06-04 06:23:00 UTC
From: resystom@web.apc.org
Message-ID: <1993Jun4.062300.29566@gagme.chi.il.us>
Source record: 43118
Cross-posted to: rec.radio.broadcasting,rec.radio.info

/* ---------- "Glasnost on Private Radio in Russia" ---------- */
LADIES AND GENTLEMEN,

We're asking you to distribute this information in the Media to support the word freedom in Russia and in former USSR as well as existence free and private radio stations in Russia like our one is. The only radio stations , which can afford themselves to present to their listeners the opportunity without any censorship or editing, to socialize live, with any leading figure in any area of social life, business and politics. The only radio stations , which are unprotected now from the financial tyranny and financial blackmailing from the side of ex-State structures , which are the monopoly owners of the frequency resources and broadcasting facilities in Russia.

There is already more than two years that our radio station ("Resonance") is forced to broadcast illegally. The State structure called "The License Comity," which is ex-Gosteleradio, monster-monopoly of TV and radio broadcasting on the USSR territory, pretended to provide (quote from the License Comity Charter:) "Demonopolisation of Radio and TV broadcasting structures," constantly refusing to determine our radio station status. The thing for , which first and foremost this Comity pretended to be established. The thing, which should be determined and licensed during 3 months from the beginning of the broadcasting of the radio station, following the current legislation and The License Comity Charter. As the "struggler against the monopolizm" they take the only frequency we worked on during half a year and made big audience, and gave this frequency to the radio station , which already had one and pretended to have two more. But. This radio station defended the directors of State sector of economy, which was 80% of the whole economy of ex-USSR. The "struggling against monopolizm?"

From one side this situation of uncertainty keeps away from our radio station any investor who want invest his money to start entering to Russian market. From another side, the private property on the frequencies and broadcasting facilities is officially prohibited and distributed amidst ex-USSR Gosteleradio and ex-USSR Ministry of Communication half-State mafia, tied with mutual cover-up. This gives the monster monopoly to their hands. This means no limits for rent prices for private broadcasters, no rules to keep the contracts conditions, no guarantee that in any moment they want your transmitter will be switched off (we had

numerous case of that). They dictate the conditions of contract to rent the facilities, they dictate prices. Any objection against violation of the contract conditions or signal parameters meets the proposal of their side for us: to break the contract and to try to find the partner in any other place.

In the present conditions of super-monopolizm it sounds like a jeer.

One of our ex-potential companions, the French radio, after learning our budget, told us that for that money they can afford themselves to keep 3 radio stations like our one.

We don't want to built any supposition about this situation, but it's clear, that ex-State structures don't want to loose such the instruments of influence of covered-up pressure on the Media, as the financial one, and legal one, otherwise they didn't force us to broadcast ILLEGALLY, having opportunity to prosecute us for this.

SO THE WORD FREEDOM IS THE SHEER MYTH IN THESE CONDITIONS.

WE CAN RATHER TALK ABOUT THE LITTLE EXTENSION AND MAKING LITTLE MORE FREE THE CHAIN RETAINING THE ELECTRONIC MEDIA NEAR THE LEGS OF STATE STRUCTURES.

Sincerely,

Crew at radio "Resonance"
Dpt.Editor-in-Chif Andrei V.Prokhorov

## 780. FM Transmitter Design - HELP

Newsgroup: rec.radio.broadcasting
Date: 1993-06-04 06:26:09 UTC
From: dbrillha@dave.mis.semi.harris.com
Message-ID: <1993Jun4.062609.29649@gagme.chi.il.us>
Source record: 43109
Cross-posted to: rec.radio.broadcasting,alt.radio.pirate

I want to build a low-cost, low-power (1W or so) FM transmitter that transmits two 20-20K analog signals in stereo so that any commercial FM receiver will pick up and understand the broadcast (~100M Hz carrier).

Ideally I'd like schematics and a parts list. Failing that, just some pointers as to where to look for design tips would be great.

And yes, I plan to comply with any FCC regulations concerning total output strength. Although at this point I don't know what they are.

My application is to build a mini transmitter to attach to the back of my home stereo so that I can place a portable remote set of speakers anywhere around the house without having to wire it up.

Thanks in advance for any information.

[Moderator's Note: I have added you to (and included this article in) the digest for alt.radio.pirate, where you should find some answers. While you say that you want to adhere to all rules and regs, the system you are describing is way over that mark. But we don't judge that here, you are free to do as you please as far as this group is concerned. Now as for the feds? Well thats another matter :-). The Ramset FM-10 stereo xmitter kit is a good start. Be careful to use good filtering if you plan to go to a watt, lest you start transmitting high posered harmonics in the aircraft and police bands :-(. Have fun! Bill]

# 781. KGAY*Gay Satellite Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-06-04 06:26:39 UTC
From: "SAULO A. LOPEZ-ROSELL" <LOPEZROS@UCS.INDIANA.EDU>
Message-ID: <1993Jun4.062639.29688@gagme.chi.il.us>
Source record: 43117
Cross-posted to: rec.radio.broadcasting,rec.radio.info

**********URGENT CALL FOR ACTION**********

KGAY, the 24-hour-a-day radio network on satellite, is having trouble getting advertisers to keep itself on the air.

When it first went on the air last Thanksgiving Day, KGAY received a huge amount of national publicity for being the first national gay radio station with listeners from coast to coast. Even though only people with a C-band satellite dish can receive the station, people reacted with great enthusiasm and it received over 400 calls from listeners during the first few days on the air. Its unique music format of alternative/dance music attracted a lot of non-gay listeners as well.

However, the station has always had difficulties getting sufficient advertising, probably due to Amendment 2/Colorado Boycott (station is located in Denver), inexperienced sales staff, homophobia of advertisers and most importantly, it lacked the Arbitron or Nelson rating numbers to back up their listenership to potential advertisers.

Since there is no rating system for satellite radio stations, it had to ask listeners to send in postcards with the sentence "I listen to KGAY and support its advertisers" in order to convince skeptical advertisers to advertise on the station. Its call to send in postcard did not generate an impressive amount of mails as some listeners are either too lazy or too closeted to be identified as gay listeners on a piece of postcard.

A month ago, the station had change of ownership and abruptly went off the air for 2 weeks without any advance warning except the minute before the signoff. When it came back on the air again on a different satellite channel and frequency, it lost quite a few listeners who thought that KGAY went off the air permanently.

Despite of its listenership only limited to satellite dish owners, KGAY will finally get its first cable affiliate in Austin, Texas in one month and West Hollywood, California in 2 months.

But it CANNOT survive another month without additional advertisers. Yes, it is a catch-22 situation that needs help of people on Gaynet.

It would be a tragedy for the station to go off the air due to lack of advertisers. It is ironic because we gay people supposedly are the golden market for advertisers.

The current programming line-up includes This Way Out, music and interviews with Gay and Lesbian artists, hourly gay and lesbian national/local news, great selection of alternative and dance music, Metropolitan Community Church Sunday service, a talk show featuring Colorado's activist group Ground Zero. Past specials included full-length coverage of the court proceedings in the Amendment 2 hearing.

If you want KGAY without satellite equipments, call your cable operator and tell them "I want my KGAY Radio Network!"

The toll-free studio request line is (800) 488-KGAY or (303) 839-8325 (the DJ will answer if she or he is on the air at the time of your call, the station is on tape-replay mode at night). The program director's office number is (303) 839-8321.

**********WHAT YOU CAN DO TO HELP**********

Get a postcard, put the sentence "I listen to KGAY and support its advertisers" on the back and send it to:

KGAY Radio Network
Box 9383
Denver, CO 80209

You do NOT have to put your last name or full address. A first (real or fake) name and your city and state are sufficient. If you put your full address with your name, you are automatically entered on the KGAY mailing list, which allows you to participate in weekly drawing for *free CD giveaways*. You do not have to call the station when your name is drawn as a winner (obviously most of you cannot listen to the station). TELL ALL YOUR FRIENDS TO DO THE SAME!! Send multiple postcards if you can!

If you know of charitable wealthy gay or lesbians, have them contact the station. It is in need of cash or new advertisers to launch new ads on satellite TV Guides and promote themselves to cable companies.

> go for those calls. 88.1FM became WMBR and since that day most of the
> money for their operational budget comes from the interest earned
> on the money Turner paid to them.

As comptroller and unofficial historian at WMBR (as a matter of fact, I'm typing this at 'MBR's Mac as I speak), I feel compelled to correct the factual errors (and there are many) in Mark's post.

It is correct that, in 1979, the FM radio station at MIT (then operating with call letters WTBS) changed its calls to WMBR, in return for a generous donation from Mr. Turner. However, the amount of the donation was nowhere near $5-6 million - the actual figure was $50,000, enough to fund a power increase from 10 watts to 200 watts, but certainly not enough to establish a trust fund for the station. Our operating budget is funded in part through a grant from MIT, with the remainder coming from listener contributions made during our annual fundraising week.

Also, it is incorrect to state that Oedipus was "running" WTBS/WMBR at the time. Oedipus has never been general manager here, and to my knowledge has never held any other management position at the station. (I should state that Oedipus is currently a member of the Technology Broadcasting Corporation, the group which is appointed by the President of MIT to oversee the station and which holds our FCC broadcast license; however, his appointment to the Corporation came many years after the Turner transaction.)

I hope this sets the record straight...

# 784. NonComm FMer for Sale in St. Louis

Newsgroup: rec.radio.broadcasting
Date: 1993-06-04 06:31:40 UTC
From: Will Martin <wmartin@STL-06SIMA.ARMY.MIL>
Message-ID: <1993Jun4.063140.29878@gagme.chi.il.us>
Source record: 43122

BOARD OF EDUCATION PUTS RADIO STATION ON THE BLOCK

(from the St. Louis South Side Journal, a weekly paper, dated May 30 1993)

The St. Louis Board of Education has decided to sell the district's radio station, KSLH-FM 91.5, ending 43 years of operation.

The board unanimously agreed Tuesday night to put the station up for bids with a minimum price tag of $250,000. The district has 180 days to sell the station or return to the board for further direction.

The reason cited for the sale was financial. Most of the equipment of KSLH is over 40 years old and the board decided it was too costly to update the equipment, which would include buying a more powerful transmitter.

In its heyday in the 1950's, KSLH had broadcast daily instruction as well as special events in the district. Up until two years ago, KSLH had broadcast school board meetings. Webster University stepped in a little more than a year ago and staffed the station with its students, linking its equipment by phone to the KSLH transmitter.

A financial crunch in the district two years ago, however, limited the use of the station. KSLH was costing the district $250,000 annually when it was in full operation.

***End of quoted material***

What isn't mentioned in the above is that the period between when the station stopped being run by the school district, and when Webster took it over to make it a jazz station, the programming was being fed by this one non-paid volunteer guy out of his basement, and it was a pretty good eclectic mix of various things. I enjoyed it during that period. Unfortunately, the telco stepped in and raised the rates for the circuit that linked the guy's house with the transmitter site (in mid-town St. Louis city) to such an outrageous amount that it killed the arrangement.

This station is mono, and currently is broadcasting jazz with minimal interruptions. It's pretty nice background music.

What I am wondering is about the asking price. From the article, and from general impressions I've gathered over the years, it appears that the equipment and facilities of the station are just about worthless. Maybe the tower is OK, and I guess the land it sits on is worth something (but there's a lot of vacant land going begging inside this city, so it can't be worth much). Also, it's not clear just what is being sold -- the tower and transmitter and original studio are on

part of a school grounds, and I don't know if the price includes that part of those grounds. I don't know if it shares a building with other school facilities, or is a stand-alone structure.

But, anyway, this is on 91.5 MHz, in the non-commercial part of the FM band. So anybody buying it CANNOT make money off it. Therefore, asking $250K is a pretty effective filter to keep any impecunious private groups or radio enthusiasts from getting this. With these days of tight budgets, it would be hard for another school to buy it. If the equipment isn't worth anything, and the tower site is not suitable for a higher-powered output (it's smack dab in the middle of a residential area), it would seem that all a buyer would really be getting is the license. And if they can't use that license to make money, who would be interested?

The obvious answer is a religious organization. I recall reading and hearing some years ago that there was a rising tide of protest about "educational" stations and allocations in the 88-92 MHz range being taken over by religious groups. I don't know what the status of this situation is; I recall the protest being based on the fact that the religious organizations *could* spend some more money and get regular commercial stations, and not wipe out the possibility of different and non-standard programming in the educational FM spectrum. But in this case, it looks to be inevitable that the only possible buyer that could justify to itself the cost would be a religious group which has a non-financial motivation to get a radio voice.

And this brings up another question: is it legal for the St. Louis Board of Education, a tax-supported public-school organization, to sell a facility to a religious organization? Is there any case law about this? It would basically be equivalent to turning over a public school facility to a religious group's viewpoint for a price. In days when the Supreme Court says it is illegal to have a prayer mentioning "God" at a public-school graduation, I would surmise that this particular action has been the subject of a court case. But I don't know of one, or any details about such actions, if they have occurred. I would think the sale of this radio station to a religious group would be just about identical to the sale of a no-longer-used school building to a religious group for them to run a school there, and I seem to recall that this was publicized here in the past as having been declared illegal. But I could be wrong. (We have abandoned school buildings here, and I thought I had read that a religious organization had tried to buy one but the district couldn't sell it to them. But my memory is vague on this.)

Perhaps if it is an open bid situation, the nature of the buyer is not important? Anyone could bid on and buy whatever is for sale? But logic doesn't have much to do with law these days...

I'd appreciate seeing comments about this item in specific, or on the general question of the validity of religious groups using "educational" FM allocations, and the legal issues I asked about.

# 785. Info in Ramsey FM-10 Transmitter kis

Newsgroup: rec.radio.broadcasting
Date: 1993-06-05 05:28:44 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <1993Jun5.052844.19798@gagme.chi.il.us>
Source record: 43123
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Hi,

Here is the FAQ file I saved on the Ramesy FM10. These FM BC band stereo transmitters are frequently asked about here and in a.radio.pirate. While the act building a pirate station is not my intent here, the FM10 does serve quite well for remote listening applications. 'Micro radio cells' if you would.

I have heard of hams using them to monitor the 2 meter repeater on one channel and the police scanner on the other channel. Real handy when out the neighborhood or just running around in the house. Another possibility is to connect the FM10 to the main stereo in your home and rebrodcast to other receivers in your home. There are any number of applications where one might want to use a headphone radio and listen to some source that isn't very portable. Perhaps one might not want to disturb others in the family with the added background noise. I sometimes watch noisy movies after my wife has gone to bed. I switch the VHS hi fi vcr to the FM10 and listen in private.

Anyhow, here is the FM10 FAQ that Mycal wrote for a.r.p. some time ago: [I'm not sure if Mycal is still on internet or that archive file access will work. This information is a bit dated and does not reflect current reassignments or today's date.]

---

Ramsey FM-10 Info
by
mycal@netronix.com

7th Edition
---
Here is a rough compilation of information about the Ramsey FM-10, and other BA1404 Stereo FM broadcasters. Some of the modifications may make your BA1404 based broadcaster illegal to use on the open airwaves in the US and Canada. Also it has been brought up that the stock Ramsey FM-10 kit may exceed FCC power limits when used with a proper antenna.

The infomation contained in the file is in no way complete, nor do I take any responsibility for its accuracy. With that in mind, along with the above paragraph I must say :

"This file for informational purposes only."

About This File
---

When I first started hacking on my FM-10, a few of us on alt.radio.pirate were exchanging information on mods to improve the range, stability and audio quality of the FM-10. After a couple of posts about filters and amps, my mailbox was swamped with requests for copies of previously posted infomation and other questions about the FM-10. So rather than drive myself crazy with sending a piece of info here and there, I decided to dig through my mailbox an notes and compile this file. I hope it helps. Also if anyone has more infomation about the FM-10 or FM transmitters, antennas, mixing equiptment, programming information, stories about pirates, or anything else that falls into this realm, please send it to mycal@netronix.com. I will try to update this file as new information becomes availible.

Also I am working on a some Postscript files that will contain instructions on how to build some equiptment that is to complex for ASCII art. You might want to check the FTP'able archives every month or so.

I would like to say thanx to all the people that contributed to the information in this file. The list has grown quite long, and some of the contributers would like to remain anonymous. So for now I am going to forgo all the names, if this is not up to your liking please let me know.

FM-10 Mailing List
------------------
First Things First. There is now a mailing list that deals with the topic of the Ramsey FM-10 and other BA1404 based FM Stereo Transmitters. Feel free to join up and contribute.

To send a message to the mailing list, send your question, reply, comment, or contribution to :

fm-10@dg-rtp.dg.com

To add or delete yourself from the list, send a short message with the function (add/delete/change address) along with the relevant e-mail address to:

fm-10-request@dg-rtp.dg.com

If you have any questions I can be reached at myca@netronix.com.

FM-10 Archives
--------------
Yes it is finally here, message archives of the fm10 mailing list and a place to put/find schematics, reviews, stories, etc. related to the FM-10 and other BA1404 based FM transmitters. Currently a 350mw amp plan and the BA1404 spec sheet are located there.

People can FTP into dg-rtp.dg.com with user "anonymous" and password "<your EMail address>". In the fm10 directory you'll currently find two sub-directories:

incoming
This is writeable by everyone and this is where people should
upload new stuff.

msg-archives
This directory will have files named according to the date they
were last "sealed". The file "Current" is a running log of
all EMail messages from the last "seal" date of the archives.

I want to thank Ed Savage and the guys at Data General, NC for
making the list and the archive possible.

Snail Mail Info Packet
----------------------
For $3 in the US, $6 overseas, I will send you an info packet I have
put togeather. It includes plans for 4 amps (light years ahead of the
70mw one shown here) with outputs from 200mw to 5watts, instructions for
modifing the Ramsey PA-1 for fm radio band operation, a little blurb on
antennas, a block diagram showing a typical station, and the preliminary
design of my new synth transmitter. The content may change as I get new info.

Address to send the $$ to is:
mycal - FM info
pobox 750381
Petaluma, CA 94975-0381

You can also use this address to send me any info that would be hard
to send by email.

Other Places to Look
--------------------
alt.radio.pirate is another good forum to find or post information on FM
radio transmitter. Although you may not have pirate aspirations, many of
the things talked about can benefit everyone.

Other places to scan, sci.electronics and the amateur radio groups.

Recommended Test Equipment
--------------------------
An SWR/Power meter is a giant help, a CB to 2 meter one will suffice.
Power readings will not be accurate, but can be useful for peaking.
The most important part is the SWR meter, this is very important when
making an antenna.

A note on power meters. I recommeded the above powermeters because they
are inexpensive and most people that are interested in hacking a FM-10
have very limited funds. These are by no means accurate, but they will
give you some idea what is going on. If you can spend the money you
can get an accurate power meter that is designed for this band, but the
cost is 10-15 times more.

A 50ohm non inductive load is also very helpfull, for low power applications
a 50ohm 1/4 or 1/2 watt carbon resistor works well. This can be used to
tune up your kit and amp without interfearing with anyone. Also note that

you can run as much power you want, legally, as long is it doesn't radiate.

A VOM with amps is very helpfull. I would put out the extra bucks and
buy one with a freq counter (if you shop around, about $60-$70). Buy
the one that covers audio to 20Mhz(or more). If you are serious about
electronics you need one of these!

Dummy load
----------
Dummy loads are great for testing, without radiating a signal. In fact
you can run as much power as you want into one of these things leagally!

Basically you want to create a non-inductive 50-ohm load. This can be
done with regular carbon resistors, or by buying pre built Amature or
CB radio loads. For low power ( <.5 watt ) an ethernet terminator works
well (check temp when using if it gets very hot lower input power, if it
is still cool you may be able to go up to .75 watt.)

Most CB loads use a 2-watt carbon 50-ohm resistor.

You can build your own, as wimpy or as studly as you want by running
resistors in parallel to create 50-ohms. ie, 2 100 ohm 1/4 watt resistors
will create a 1/2 watt 50 ohm load...

Do not use 50 ohm wire wound resistors, they are not 50 ohms at radio
frequncies.

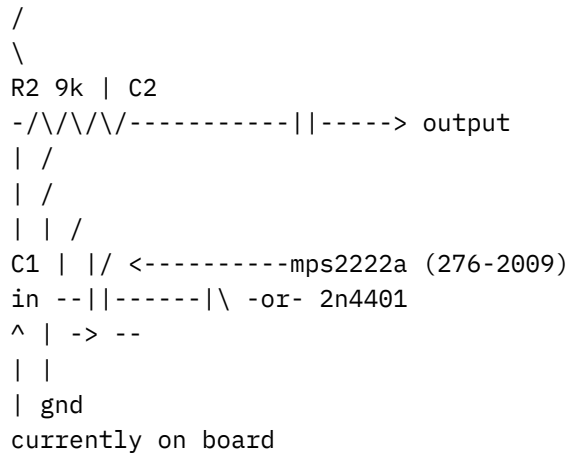
```
-----
---------\ Sample Dummy Load where -****- = 50 ohm
---|--****-- / mounted in UHF connector. carbon
--------- resistor
-----
```

Ramsey's Address
----------------
If your looking to purchase a FM-10 kit and can't find one locally try :

Ramsey Electronics, Inc.
793 Canning Parkway
Victor, New York 14564
Phone (716) 924-4560
Fax (716) 924-4555

Ramsey FM-10 70mw output amplifier
----------------------------------
Provides almost 9db gain to bring the output power of the Ramsey FM-10 Stereo
transmitter from 8mw to 70mw. Not the best design, but all parts can be
found at Radio Shack! Much better designes are soon to be available at the
archive site.

```
+12v
|
/
\ R1 *220 ohms(1/2 watt)
```



currently on board

* you can also use 2 440 ohm 1/4 watt resistors run in parallel

I built this thing right on the underside of the FM-10 kit, C1 is the cap that currently goes to the RCA ant jack, the 9k and the 220 ohm resistor have to be bought, note that if you cannot find 220 ohms you can make one by using 2 440 ohm resistors in parallel, and that a 10k will work in place of the 9k but yealds poorer performance (-5%).

The mps2222a is from Radio Shack part number 276-2009, use this part! if you substitute it for a 2n2222a you will get only half the gain. Be very careful to get the leads in the correct orientation!

I have found that a 2n4401 can be used in place of the mps2222a with a little better performance, about 5mw more. I think the 2n4401 can be found at Radio Shack too.

C2 is of the same value of C1, I took the one that goes to the on board antenna pad.

Important! the value for R2 that seems to be optimal is 220 ohms, but it is very close to the sat point, If the amp. seems noisy (interferes with the TV etc.) back this value off to 240 ohms. If you lower this value below 205 ohms the power meter may read higher power but this will not be true, the transistor will be spewing all kinds of junk and the power meter will mistake this for higher output (in reality the signal we want will drop considerably.)

Well that's it, effective range with a good antenna should be a little over double.

Ramsey PA-1 2-meter to 3-meter conversion mod
---
The Ramsey 2-meter amp (PA-1) can be converted for use on the FM broadcast band. The inductors L1 and L2 need to be changed to the following:

L1 - Should be replaced with a 1-turn 1/4" diameter coil, Identical to the stock L2 shown in the PA-1 manual.

L2 - Should be replaced with a 2 turn 1/4" diameter coil, one more turn than the above coil.

Tune up should be the same as in the PA-1 Manual. Note that a FM-10 kit cannot be used to drive a PA-1 kit alone. The FM-10 kit doesn't put out enough power to turn on the PA-1 kit running class-c. So you have two options. One, you can do the "biased on" (newer kits may call this class-b) modification shown in the PA-1 manual. Doing this you can drive the PA-1 with a stock FM-10, yealding about 200-300mw of output power. Or two, you can drive the PA-1 with the output of the 70mw amp shown above and get close to a watt of output power.

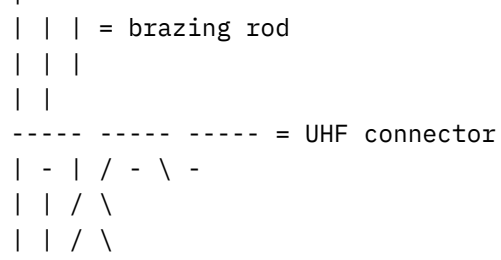
It should be noted here that running the PA-1 "biased on" (or class-b) produces a much cleaner output signal than running the PA-1 class-c. Also that you can run the PA-1 "biased on" while driving it with the 70mw amp, but you will show slightly less gain than in class-c.

ANTENNAS -- read, read, read, read, most important!
--------
Also Do you have a good antenna? I think that is the most important thing that you can do for extended range. I built a 1/4 wave ground plane using a UHF connector and 5 lengths of copper plated brazing rod (found at the local welding shop). Works great and only cost $3 dollars to make. Remember good antenna will improve you range much further than a good amp into a bad antenna. So this should be your 1st project to increase your range.

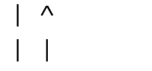
use the formulas out of your FM-10 manual 234/freq=length of rod.

insert the 4 ground plane rods in the 4 holes of the UHF connector, stick them through about 1/4 inch and solder. Solder the radiator in the top of the UHF connector (you may have to grind it a bit to fit.) Then bend the ground plane rods to a 45 degree angle to the radiator. There you have it a very effective antenna, just connect with a 50 ohm cb cable to your amplified ramsey, stick the antenna in a tree or in another high place and you should have 1 miles of solid coverage (when using the above amp.).

Also If you have an SWR meter you can cut the rods a little longer and start clipping the ends off a little until you get the best SWR reading.



The final antenna should look like this:



```
// \\ sky ground --horizon--
|
v
```

That is 1 radiator pointing strait up and 4 ground plane
radials. (sorry for this extream description, but there
has been some confusion.)

Be careful when you bend the brazing rod, don't break the connector. Grab
the rod right below the connector with a pair of vice-grips (or the likes)
and bend the brazing rod at that point.

Try not to have anything metal near the radiator, this will effect
the radiation pattern. The radiation pattern should look alot like
a donut surrounding the radiator, though deformed a bit.

I have been told that you can shorten the radiator and make the ground
radials longer to lower your radiation angle, but I haven't tried this, nor
do I know what this would do to the antenna impedance.

On The Road
---
Old magnet mount CB antennas can make great mobile antennas, just take all
of the base load out of them and cut the radiator to 1/4 wave length.
If you need a longer radiator than the one that comes with the antenna
use the above mentioned brazing rod.

I've tried this antenna and it works great! It is better than my di-pole at
home and you can drive to a high, optimal location for your broadcasts (and
you can see the vans comming for miles ;'). Also with this setup you need
very little coax cable. Line loss using RU-58u can be killer @ 100Mhz.

You could also try a 5/8 wave length antenna, this would give you 2+db gain,
or almost 2x power gain on transmit.

Filter design for FM Radio Transmitters.
---
It is very important to have a clean signal, the way 99% of all people
who get busted for illegal transmitting is that the people that live
around them complain about interference. Most of this interference
is caused by harmonics. Filters cut down these nasties. So don't
draw attention to yourself, keep everyone happy, including yourself,
be clean, use a filter.

When you amplify a signal, you get unwanted byproducts these are called
harmonics. The show up at multiples of your starting frequency. For
example if you amplify a 50mhz signal you may get echo's on 100mhz, 150mhz
200mhz, 250mhz... If you interfear with your neighbors TV, the local fire
department, or anyone else, you are just asking for trouble. If you are only
on the FM Band, you will hardly be noticed.

...
Filter Designs

```
--------------
(basically scaled from the charts in the ARRL handbook).

Filter Design: 7 element Chebyshev
I run @ 88.1 so my 1st harmonic is 176.2
This filter seems ideal.

Fc 3db 20db 40db
85.8mhz 95.9mhz 116mhz 148mhz

.132uh .150uh .132uh
-----()()()-----()()()-----()()()-----
| | | |
<-50ohm - 33pf - 68pf - 68pf - 33pf 50ohm->
- - - -
| | | |
--------------------------------------
|
---
-

lowering the 33pf caps to 30pf and the 68pf caps to 62pf would make
this filter sutable for higher frequencies like 100mhz.

Filter Design: 5 element Chebyshev
Not as good as above, but thrown in anyway.

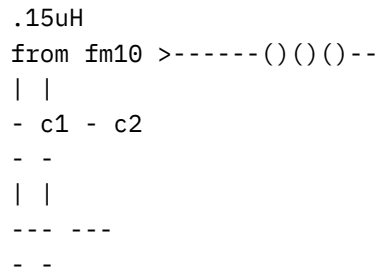
Fc 3db 20db 40db
81.8mhz 105mhz 147mhz 222mhz

.128uh .128uh
-----()()()-----()()()-----
| | |
<-50ohm - 30pf - 62pf - 30pf 50ohm->
- - -
| | |
--------------------------
|
---
-

The tuff part in the above is winding the coils. 3t of #12 wire 1/2" diam
should be about .12 uh. 4t is .17 uh. (but ugh, #12 wire is big stuff).
You could just use molded inductors, I have found these work well. Try
to use fixed value caps, or fixed value with small 5pf trimmers. The
latter works well when you have a spectrum analizer to tune there babies.

I just pulled a program of a BBS that tells you how to wind inductors.
Give it the value and wire size you have and it will tell you how many turns
and what size. Way cool. More on this later.

Very simple Chebyshev filter.
-----------------------------
```



88mhz 102mhz 107mhz
c1 62pf 54pf 50pf
c2 62pf 54pf 50pf

It won't knock the harmonics down as much as the other two designs but
the good thing about this one is that it uses standard off the shelf
parts. The inductor is one of those molded jobbies that looks like
a resistor so you can make this very small. You may stack these things
to make a better filter. Each stage will knock the 1st harmonic down
about 15db.

Use the above cap values depending on which freq range you want to operate
at. ie. if you run 87-90 use the 88mhz vals, 90-103 use 102mhz vals,
and above that use 107mhz vals.

Try to use fixed value parts!

[Also of interest is that the FM-10 puts out about 8-9mw and the 1nd harmonic
is -25db off the fundamental (frequency we are broadcasting on). The FM-4
Kit by ramsey puts out 130mw and the 1nd harmonic is only -12db off the
fundamental, which means the 1nd harmonic of the FM-4 is about as
powerful as the FM-10. db is log10, ie 3db is 2 times 6db is 4 times...]

FM-10 Myths
-----------
There have been several myths about the FM-10 kit, the most prevelent are :

1) The fm-10 puts out 100mw of power. This is not true, or at least not
true for the Ramsey FM-10's that I have tested. They put out between
8 and 12mw when driven with a 12volt supply. (note: there has been several
revisions of the FM-10, it is possible that the original version put out
more power, but I find even that highly unlikly since it would require
another amplifier stage.) Also the FM-10 is the only low cost kit, that
I have seen, with an amplifier stage. Most others have power outputs
in the fraction of a MW area.

2) The fm-10's output can be cranked up by reducing the value of R9. This
like the above is not true. R9 and R10 are optimized for maximum output
and greatest harmonic suppression at 12volts. There are much better ways
of getting more output power than to mess with this output stage. Lowering
the value of R9 will most likly degrade the FM-10's preformance and cause
lots of interfearance.

==========

FM-10 Improvements -
---
(Some from ACE magazine.)

Stereo Pilot Mod
---
One of the first problems experienced with the FM-10 is difficulty
in getting the stereo pilot to operate correctly. One solution is to
replace C7 and C8 with a 38khz crystal, this works the best and is
recommended. If you cannot find a 38khz crystal, you can make your life
a whole lot easier with a couple part changes. As indicated on the
Ramsey schematic, about 110pf is necessary to tune the oscillator. The
components supplied to achieve this are a small fixed value capacitor (C7)
abd a slightly larger value trimmer (C8). Since proper setting of the
trimmer occurs within a very small 'window' (about 5% of the trimmers
range), it can bet difficult or impossible to adjust the pilot to 19khz
and have it stay put. This can be cured by increasing the value of c7 to
100pf and replacing c8 with a 6-50pf trimmer (Radio Shack #272-1340);
a 5-30pf trimmer will do the trick. The RS trimmer will not fit the holes
in the pc board; one needs to cut the leads off a spare resistor and
solder them to the legs of the trimmer (just use bits of wire) to mount
it on the component side of the board.

On a 2nd note: I replaced c7 with a 68pf cap and found it much easyer to
tune a rock solid 19khz at the test point.

Crystal Mod
---
old set up new setup
c8 c1 xtl where c1=10pf and xtl=38khz
|-||-| |-||-|\|-|
| c7 | | | v8=var cap
|-||-| | | c7=cap
| | | |

Remove C7 and C8, replace with 38khz crystal and 10pf cap. Note that
the 10pf cap and the crystal are running series and the old cap setup
is running in parallel.

Note: there have been good and bad reports on using the Epson crystal
from digi-key. From what I have heard the crystal is quite delicate,
and in at least one case the experimenter destroyed the crystal.
In one of the positive case c1's 10pf cap was replaced by 2 22pf caps
run in parallel, this yealded a rock solid stereo.

Treble Boost Mod
---
Treble boost (pre-emphasis) improvement. The FM-10 appears to have
been designed by someone outside the United States since it operates
at the European audio standard of 50 microseconds. Receivers in the
US are set up for 75 microsecond de-emphasis. R3 and R6 determine the
time constant for the pre-emphasis curve. Replacing them with 75K ohm
resistors (standard value 68K ohm is close enough) will result in

improved audio response.

A much better pre-empasis/input circut is shown in the July 1992 issue
of "Radio Electronics". Not only do they use 75K ohm resisters in there
pre-empasis, but they filter stray RF signals by inserting a .001 cap
between pin 1 (of the BA1404) and ground, and pin 18 and ground.

It has been noted that the above mod may actually cause distortion on
cheaper stereo receivers, since they were mass produced for the world market,
they were designed for the European audio standard, which Japan and other
Asian nations use too. Try it out, let me know what works for you.

Anti-Drift Mod
--------------
There has been quite a bit of discussion on the FM-10's frequency stability.
Complaints that digital receivers cannot lock onto the FM-10's signal for
any great length of time. I have used the below mod with good results
(I used an N750 negative temperature compensated disc), but I have been
told that Mylar or Polystyrene caps are even better.

The FM-10 was designed to be inexpensive and cost-saving measures with
components are inevitable. Disc ceramic capacitors are less expensive than
silver-mica caps, and also much less stable. Simply replace c16 with a
silver-mica, tantalum or negative temperature compensated disc (say anywhere
from N150 to N750) cap of the same value.

==========

Sources
-------
The following is a list of sources for items used for modifications,
replacement parts, or other kits and equiptment used in FM radio
transmitting:

--
BA1404's and other FM Broadcaster kits can be found at :

D.C. Electronics
phone: 1-800-467-7736 & 1-800-423-0070
fax:1-602-994-1707

They sell BA1404's for $2 a piece, seems to be the best deal going.
Also they Sell 38Khz crystals for $5.99, which is also a fair deal, the
crystals are tiny ones like the digi-key ones, but a different brand and
work without problems or the Digi-Key ones.
--
--
38Khz Crystals can be obtained by calling :

Digi-Key at 1-800-DIGI-KEY.

38.000 KHz by Epson America, Digi-Key part No. is SE3314
(see notes on crystal mod on using this crystal, also note that
this is a cylinder type crystal and kinda delicate. you are probibly

better off getting the 38Khz crystals from D.C. Electronics.)
--
--
Panaxis Productions makes some very high quality FM transmitters. The
last word in Transmitting, tons of kits.

Panaxis Productions
PO Box 130 (right next to my old place of study
Paradise, CA 95967-0130. Chico State! )
(916)534-0417

Catalogs are $2, well worth it, a must have item.

A little taste of there catalog :

MMC1 Macromod Compander for 2:1 compression
Plans $12, PCB $18, P+P 26.50, Full kit $87

SG High performance stereo generator
Plans $15, PCB $13.5, P+P 26.50, Full kit $105

FME PLL FM exciter
Plans $17.5, PCB $15, P+P 24.50, Full kit $129

More expensive than a FM-10 but much higher performance.
--
--
A company called Progressive Concepts sells plans for a 88mhz to 108mhz
amp. The power curves show that 12mw in will yeald 2.5 watts, but can
be driven harder for up to 12 watts. (I have not seen these plans)

Plans only in U.S., $16.
Progressive Concepts
1313 N. Grand Ave. #291
Walnut, CA. 91789
--
--
If your looking to purchase a FM-10 kit (or a PA-1 kit) and can't find one
locally try :

Ramsey Electronics, Inc.
793 Canning Parkway
Victor, New York 14564
Phone (716) 924-4560
Fax (716) 924-4555

Should be $29
--
--
The makers of the infamous BA1404 :

Rohm Corporation
Rohm Electronics Division
3034 Owen DR

Jackson Business Park
Antioch, TN 37013

PH: (615)-641-2020 (ask for someone who deals with the BA-1404)
FAX: (615)-641-2022

Also they have:

PO Box 1399
Antioch, TN 37011-1399

==========
--

============== ==============
============== Other Raw Info ==============
============== ==============

the 2sc2570 is supposedly replaceable with an ecg10. Also I have used
an MRF901 for a replacement, though tough to mount, try bottom of the
pc board and connecting the whip anttenna pad to ground plane. MPS901's
seem to replace directly, same case too. I have also been told that
mps918's work well also.

The MRF239 can be used aas direct replacement for the Ramsey 2 meter PA-1
kit. Cost is around $14 bucks.

Newark also has the 38khz crystals for $2.90 ( I don't know newarks address,
this was sent to me in the mail, will try to find it though.)

------------------
------------------

If you have any info, I stress "ANY", about this subject please drop me a
byte or two. Also let me know what you success with this information, and
what you are doing, whether it is a mr. microphone or a full blown studio,
exciter, amp combination.

have fun,

mycal@netronix.com

PS. all spelling or grammar flames ignored. So there.

## 786. Seeking station list/info S.W Missouri

Newsgroup: rec.radio.broadcasting
Date: 1993-06-08 10:29:39 UTC
From: rrb@deja-vu.aiss.uiuc.edu
Message-ID: <C8At5F.2vC@news.cso.uiuc.edu>
Source record: 43124

Hello net friends.

A good friend of mine is moving to Branson (sp) Missouri in the next month. What I am looking for is as complete a list as possible of radio stations and their formats, powers etc.

Branson is in SW Mo. and is near Joplin, Springfield and probably a bunch of other places as well. It is, however, in the sticks and may have a station or three, but he is looking for a comprehensive list of signals that are likely to cover the area.

Any help will be much appreciated.

I will forward all replies to him, and post a summary.

Thanks

>Radio station style jingle "Amhiser(sp) Bush, St Louis"

If commercial stations are playing this, they're really brave.
It hits VERY close to the bone. It'd be pretty sad if listeners
to these stations hear this commercial and don't appreciate the
irony. I guess any station playing it fancies itself an exception,
huh?

--Dave.

# 789. Re: FM Transmitter Design - HELP

Newsgroup: rec.radio.broadcasting
Date: 1993-06-09 21:59:53 UTC
From: alo2@po.CWRU.Edu
Message-ID: <C8DJrt.GvJ@news.cso.uiuc.edu>
Source record: 43127

In a previous article, dbrillha@dave.mis.semi.harris.com (Dave Brillhart) says:

>
>I want to build a low-cost, low-power (1W or so) FM transmitter that
>transmits two 20-20K analog signals in stereo so that any commercial
>FM receiver will pick up and understand the broadcast (~100M Hz carrier).
>
Hmmm...a 1 watt FM transmitter would be many times beyond illegal as far as
the FCC goes. Also, FM stereo broadcasts don't work on two seperate 20-20K
signals ("discrete stereo"), but rather on "Multiplexed stereo", which takes
"left" and "right", and does some phase tricks and comes up with
"Left + Right" and "Left - Right", with the latter being referred to as the
"Stereo subcarrier" and transmited in subcarrier form at 19khz. When it's
received at your system, the receiver does the opposite phase tricks and
gives you "Left" and "Right" again. This maintains phase integrity.
That's the only way your receiver would get true stereo back out.

>Ideally I'd like schematics and a parts list. Failing that, just some
>pointers as to where to look for design tips would be great.

I believe if you'd been here 10 years ago there was a Heathkit that would have
suited you well. Oh, the nostalgia for those Heathkits...

>And yes, I plan to comply with any FCC regulations concerning total
>output strength. Although at this point I don't know what they are.

Oh boy...FCC regs (47 CFR 15) limits you to a field strangth of 150 microvolts
per meter at three (3!) meter distance from the antenna...and that's IF you
want to go through the unbelieveble hell of FCC paperwork. (You said you
wanted to be legal :) ) It'd be much easier to buy one of the commercially
available systems that work in the 900 MHz band to rebroadcast, or get one of
the sytems that inject RF into your home's AC wiring, then provide a plug-in
receiver to get it back.

>My application is to build a mini transmitter to attach to the back
>of my home stereo so that I can place a portable remote set of
>speakers anywhere around the house without having to wire it up.

Try the DAK catalog...they usually have a lot of bizarre RF stuff in there.
GOOD LUCK! Hate to be such an intense bummer. IT's much, much easier to
run it illegally...

Does anyone out there in radio land know who to reach Jim Sumpter? He is the president of S&S Broadcast, which wrote the software we use to schedule our music, and he seems to have disappeared!

Thanks!

> Am I just way off here? Or, is this truly bizarre?

There are two common mechanisims for long-distance (DX) propagation on the
FM broadcast band.

1- Sporadic E "reflection" from the E region of the ionosphere. The E region
is at a height of about 100 km above the Earth. If E-layer ionization becomes
extremely intense, as is often the case in the late Spring and the summer,
frequencies up to 100 MHz and higher can be returned to the Earth. Because of
the height, and the curvature of the Earth, the maximum distance is roughly
2400 km. The refraction takes place at the mid-point of the path between the
station and the listener; weather (especially your local WX) has NO EFFECT.
There is a MINIMUM distance as well, since it takes denser ionization
to bend the waves at sharper angles. The higher the frequency, the more
ionization needed for a given bending angle. I'd be surprised if you heard
FM broadcast stations closer than 1000 km by the ionosphere. At 50 MHz, I've
heard ham stations as close as 300 km. The higher the frequency, the less
likely it is that the ionization is dense enough to bend the waves back to
Earth (at any distance). In June/July Es is VERY common at 28 MHz, present
about 5% of the time at 50 MHz, 1% or less at 100 MHz, and very infrequent at
144 MHz. Why don't we actually hear FM by Es this much of the time? Largely
because the signals aren't often strong enough to override locals, and there
may not be ANY stations in the small localized areas that the "opening"
reaches to.

2- Tropospheric bending or ducting takes place near the Earth's surface and is
completely dependent on weather. Distances run from 0 to 1000 km or even
more.
The radio waves are bend back to earth by sharp discontinuity in the air's
dielectric constant (index of refraction) caused by an abrupt change in the
air's temperature or moisture content as one goes higher.

A good hint is a stable high pressure are reaching from you to the distant station. There is nearly permanent "tropo" along the southern California coast from LA to San Diego, with warm air and cold ocean. It is fairly common in Spring and autumn in the eastern half of the US. Even more common across the Gulf of Mexico from Florida to Texas. There just isn't enough water in the atmosphere in the Rocky Mountain/high plains area to have tropo very often. Tropo propagation goes as high as thousands of megahertz. Surely you have seen UHF TV stations from 200-300 km away from time to time.

I hope this helps. See QST, the ham radio magazime, and the ARRL VHF and UHF publications for much better coverage of this subject. See "The World Above 50 MHz" monthly column in QST for regular reporting of ham DX at VHF and UHF.

>Anybody know anything about 93.1 fm Amarillo?

For the past few days, at least here in Texas, there has been quite a bit
of ducting as well as E-layer skip at the 50 MHz region. It is possible
that this could go into the FM broadcast band with no problem.

I spoke to south Texas from Dallas on the 440 MHz ham band. For those of
you not familiar with Ham radio at 440 MHz, typical narrow band FM
distances in Texas are 30 - 50 miles. I was talking over 300 miles on
Wednesday morning.

Spring is the prime time for this kind of propagation, especially in the
early morning hours just around sunrise. The addition of nice, cool,
clear mornings (or evenings) makes prime conditions for FM DX.

For a rather good explanation of propagation, I recommend "The Radio Amateurs Handbook" which is available at most libraries. There are new editions each year, but the section on propagation remains relatively the same.

And finally, no, you are not nuts. What you experienced is normal. Next time, write down some details of the programming, send them a letter and get them to send you a reception report!

You heard E-skip. Rare, but not unheard-of. I quote the AM FM DX FAQ...

Whereas the mediumwave band can be counted on to provide distant reception with much dependability, this is not the case at all on the VHF-FM band. Under `normal' conditions, VHF-FM signals generally carry no more than 150-250 km (100-150 miles), or `line of sight', since the ionosphere generally does not reflect VHF-FM signals. VHF-FM transmitting antennas are thus usually located as high as possible. Tall towers, high buildings, and mountaintops are common VHF-FM transmitter sites.

However, under certain rare conditions, the atmosphere will even reflect VHF-FM signals, thus making it possible to receive these stations at quite long distances. There are two major forms this distant reception can take; the most common is Tropospheric Ducting, or tropo for short. Typically, this occurs when a warm air mass forms on top of a cooler mass closer to the ground. The area between these masses acts like a pipe, `bending' the signals back to the earth well beyond the horizon. This reception is most common in local late spring and summer months, in the post-sunrise hours. It will enable the alert VHF-FM DXer to log stations up to 800 km (500 miles) away in optimum conditions.

The other relatively widespread form of VHF-FM DX is called Sporadic E, or E-skip, because it is the E Layer of the ionosphere which reflects the signals. Like the name implies, this form of propogation is very

sporadic, yet very intense. When it's in, it is VERY strong. Stations from a relatively limited geographic area 1300-2000 km (800 to 1200 miles) away will suddenly boom in, strong, often in stereo but quite fadey, even overpowering semilocals in many cases. It will start at the bottom of the VHF-FM Band (actually TV channels 2-6 first) and work its way up in frequency. The highest frequency at which signals are reflected by the ionosphere is called the Maximum Usable Freqiuency (MUF), just as it is in shortwave, and it can occassionally surpass the top of the VHF-FM dial in an unusually good opening.

## 793. Ottawa Radio ratings

Newsgroup: rec.radio.broadcasting
Date: 1993-06-09 22:01:00 UTC
From: sjones@ccs.carleton.ca
Message-ID: <C8DJto.H0q@news.cso.uiuc.edu>
Source record: 43131

Spring ratings for Ottawa English radio stations were reported in Friday s Ottawa Citizen. Relative newcomer CJMJ-FM (Majic 100) - just 18 months on the air - continues to be the dominant force in the city. CJMJ sounds just like the Magic stations across North America - the same black-haired woman tells Ottawans how great it is just as she tells Bostonians, Vancouverites, and who knows how many others how their Magic station will make their lives better. Second place in the central listening area goes to CJMJ s AM companion CFGO, a contemporary hits station. Both are owned by Rawlco. Second in the wider listening area goes to country CKBY-FM (owned by Key Radio), but it is only 6th in the city. Key s Ottawa AM station, oldies CIWW (Oldies 1310) is far down the list. CHUM Radio s two Ottawa stations (CKKL-FM and CFRA AM) - which together used to be dominant in Ottawa - suffered further declines. CKKL-FM (KOOL-FM) which changed from an easy-listening station (and call letters CFMO) to soft rock when Majic 100 arrived still has not reached the same audience size it had as CFMO. CFRA -sports, news, confused rock - lost 10,000 listeners, but stayed in second place. Just before the release of the ratings, CFRA announced it was going to all talk weekdays, except for it s AM drive show with The General who has been doing this over 25 years. AOR CHEZ-FM has been unable to regain its position near the top (it s now 5th overall) despite trying to soften its playlist.

Morning winner - yet again - is the local CBC station, CBO, with its news and interviews. Is there any other city where the top rated morning show is on a station that has NO advertising? In the 6-10 period CBO has a 12.8 share; 6-9 it has a 13.5 share (a national network show - Morningside - starts at 9:00). Majic 100 is close behind, though, with a 12.5 6-10 share.

Here are the numbers (not all figures were provided in the Citizen). [Figures are total who listened as least 1/4 hour during the week.]

Spring 93 Spring 92
Central Overall Central

CJMJ-FM Adult 191,000 242,600 160,900 Majic 100
CFGO CHR 154,200 180,800 -
CBO News 137,700 n/a - CBC station
CFRA News/Sports 123,300 176,600 133,400
CHEZ AOR 121,500 159,200
CKBY Country 118,400 241,300

CKKL-FM Adult 98,800 146,700 150,600 *
CFMO-FM Easy listening 86,900 133,600 **
CJSB Rock 72,400 94,800 54 Rock
CIWW Oldies 69,500 76,300 Oldies 1310

* CKKL-FM had 126,900 in Fall 1992 survey and had 150,600 in spring 1992 survey as an easy listening station (with calls CFMO)

** Had operated as CHEQ-FM with a country format and 22,100 listeners until old CFMO abandoned the easy listening format. CHEQ-FM grabbed on to the format and got the old CFMO calls. They have only about half of what the old CFMO had, but it s a lot better than 22,100.

Mornings 6-10 (average quarter-hour listeners and share - figures given only for CBO and CJMJ; rank order only given for rest):

CBO 29,900 12.8
CJMJ-FM 29,200 12.5
CKBY-FM -
CFGO -
CFRA -
CHEZ -

Unlisted stations:
CBOQ-FM Classical/arts - CBC stereo network
CKCU-FM community radio from Carleton University
CFUO-FM community radio from Universite d Ottawa

There are also 6 French language stations serving Ottawa-Hull.

From: testnet!pr@pegasus.att.com
Message-ID: <C8DJtw.H1L@news.cso.uiuc.edu>
Source record: 43132

This just in the mail at DecalcoMania publicty HQ, from TVS (The Value Source)

"TVS, Inc. has been retained by Nostalgia Radio Memories to provide the advertisement campaign for the sale of their "Old Time Radio" cassette programs. Programs from their library consist of audio tapes of broadcasts, aired on radio stations from the 30's, 40's & 50's. Valid copyright protections have been observed and the tapes are reproduced by a reputable duplication facility."

The rest of the letter goes on to say that they're looking for places to advertise. I called them (1-716-534-5581) and spoke to James Hall who indicated that they are also looking to build a mailing list of people interested in old time radio programs. To get on this list write to James Hall, TVS, PO Box 159, Naples NY 14512

Paul Richards (middleman)

## 795. School sells noncomm FM

Newsgroup: rec.radio.broadcasting
Date: 1993-06-09 22:01:15 UTC
From: cph@quake.sylmar.ca.us
Message-ID: <C8DJu4.H2H@news.cso.uiuc.edu>
Source record: 43133

In a previous article Will Martin <wmartin@STL-06SIMA.ARMY.MIL> writes
>
> BOARD OF EDUCATION PUTS RADIO STATION ON THE BLOCK
>
>
>(from the St. Louis South Side Journal, a weekly paper, dated May 30
1993)
>
>The St. Louis Board of Education has decided to sell the district's
>radio station, KSLH-FM 91.5, ending 43 years of operation.
>
>The board unanimously agreed Tuesday night to put the station up for
>bids with a minimum price tag of $250,000. The district has 180 days to
>sell the station or return to the board for further direction.
.
.
. (deleted>
.
.

There are actually several issues here:

1A: Is the asking price ($250,000) excessive?

1B: Does the asking price unfairly discriminate against certain buyers?

2:Can a public school (or similar public institution) legally sell
facilities to religious organizations?

and

3: Should religious stations be allowed to use the 88-92 MHZ
noncommercial educational band?

>What I am wondering is about the asking price. From the article, and
>from general impressions I've gathered over the years, it appears that
>the equipment and facilities of the station are just about worthless.
>Maybe the tower is OK, and I guess the land it sits on is worth
>something (but there's a lot of vacant land going begging inside this
>city, so it can't be worth much). Also, it's not clear just what is
>being sold -- the tower and transmitter and original studio are on
>part of a school grounds, and I don't know if the price includes that
>part of those grounds. I don't know if it shares a building with other
>school facilities, or is a stand-alone structure.
>

It may be that the school authorities have not had this equipment and land appraised, and are probably trying to get as much as they can for this. From the description of the equipment and land, my guess is that they're asking for too much, certainly for only the equipment, and perhaps for the land as well.

>But, anyway, this is on 91.5 MHz, in the non-commercial part of the FM
>band. So anybody buying it CANNOT make money off it. Therefore, asking
>$250K is a pretty effective filter to keep any impecunious private
>groups or radio enthusiasts from getting this. With these days of tight
>budgets, it would be hard for another school to buy it. If the equipment
>isn't worth anything, and the tower site is not suitable for a
>higher-powered output (it's smack dab in the middle of a residential
>area), it would seem that all a buyer would really be getting is the
>license. And if they can't use that license to make money, who would
>be interested?
>
>The obvious answer is a religious organization.

Not necessarily.

First, I doubt that most "radio enthusiasts" would really be up to running a "real" radio station, day in and day out. This isn't like amateur radio or CB, where the operators can set their own hours. The FCC expects broadcasters to provide consistent schedules of operation, and the license can be lost if this is not adhered to.

Secondly, although one school (I'm thinking community college level or above for the most part) may not be able to afford this station, perhaps several of them pooling their funds may be able to purchase and share it.

Also, Pacifica Radio, or some similar non-profit non-religious network may be interested in buying the license.

>I recall reading and
>hearing some years ago that there was a rising tide of protest about
>"educational" stations and allocations in the 88-92 MHz range being
>taken over by religious groups. I don't know what the status of this
>situation is; I recall the protest being based on the fact that the
>religious organizations *could* spend some more money and get regular
>commercial stations, and not wipe out the possibility of different
>and non-standard programming in the educational FM spectrum. But in
>this case, it looks to be inevitable that the only possible buyer that
>could justify to itself the cost would be a religious group which has a
>non-financial motivation to get a radio voice.
>
More comments on this matter below.

>And this brings up another question: is it legal for the St. Louis
>Board of Education, a tax-supported public-school organization, to sell
>a facility to a religious organization? Is there any case law about
>this? It would basically be equivalent to turning over a public
>school facility to a religious group's viewpoint for a price.

.
.
.
> I would think the sale of this radio station to a religious group would

>be just about identical to the sale of a no-longer-used school building
>to a religious group for them to run a school there, and I seem to
>recall that this was publicized here in the past as having been
>declared illegal. But I could be wrong. (We have abandoned school
>buildings here, and I thought I had read that a religious organization
>had tried to buy one but the district couldn't sell it to them.
>But my memory is vague on this.)
>

I would assume that an outright SALE of school property to a religious organization (or anyone else) would be acceptable, while leases or other arrangements where ownership and/or use of the property is both by the school and the organization would be unacceptable or subject to certain restrictions.

Now, should religious organizations be allowed use of the 88-92 MHZ band?

First, we must differentiate between the various kinds of religious organizations. They include:

1. Religious educational institutions. One that immediately comes to mind is Moody Bible Institute in Chicago, which operates WMBI radio on the noncomm band. WMBI programming consists (at least back in 1986, when I last heard it) of religious music, local church services, and religious programming that seemed much more informative than the usual religious programming.

2. Local churches, or coalitions thereof. I believe such an organization owns a station KLRD, 90.1 in Yucaipa, CA (75 mi. east of LA). Their programming consists mostly of religious rock music, with a few spoken word programs here and there.

3. Non-profit broadcasting corporations, such as Family Radio. I think they
operate only translators between 88-92, although they might have some freestanding stations there as well. These stations generally play the usual block religious programs, although Family Radio, as a non-profit, is not supposed to show any profit from selling time. (Whether they actually
do or not is a matter for investigation.)

4. Of course, just because a religious institution owns a station does not
mean it will have religious programming. KXLU (88,9) is owned by (Catholic)
Loyola Marymount University in Los Angeles, but has only minimal, if any religious programming.

I personally have no objection to 1. and 2. above, but selling time on a noncommercial station (for profit or not) may be of questionable legality. Also, usually (but not always), stations in case 3 most likely could afford regular commercial stations, but that would probably not be an option for those stations in cases 1 and 2.

Most objections I've heard to religious programming in this band seem to arise from the followng concerns:

1. Religious programming may displace other types of programs from the band

2. Religious programming is contrary to the goals/purposes of the educational noncommercial band

3. General misconceptions/overgeneralizations/prejudices toward religious programming, or religion in general.

I won't discuss #3, but I will discuss #1 and #2

First of all, I don't know about the noncomm situation in St. Louis, but here in Los Angeles, we have at least ten noncomm stations of reasonable strength. Roughly half of these carry NPR progams at least 1/3 of the time. They also carry varying amounts of musical and/or political commentary
block programming.

Pacifica also has a station here (KPFK, 90.7) with their usual political material and some music.

There is no religious programming (outside of an hour or two of gospel music or the like) on any noncomm station in Los Angeles. (Out of over 100 commercial and noncommercial stations, only about four AM and four commercial FM stations carry any religious programming, often along with ethnic/foreign language and other specialized programming)

Do the religious stations displace other programming? I have heard reports that an overabundance of Family Radio translators, for example, in one area, have caused actual interference to other transmitters; that is a technical problem with technical solutions (frequency selection,
station spacing, limited power, etc.) I'm not quite convinced that a preponderance of FR translators in one area is necessarily better or worse than a preponderance of stations all simulcasting NPR...in both cases
other programming (assuming it exists) is possibly being overlooked or displaced. But I do believe that religious viewpoints in general are just as valid as any other programming on the noncomm band.

Finally, are the religious stations consistent with the goals of the noncomm band? I usually hear two reasons for the noncomm band allocations:

1. To provide "educational" programming
2 To provide "alternative" programming"

3. To train students in operating radio stations.

In the first case, we probably can agree that the "value" (whether it be "educational","entertainment" or anything else) is subjective, varying among individuals. What might "educate" one person might be of no interest to or even offend someone else.

"Alternative" programming is another very subjective term. Usually it is defined as "not available on the commercial radio". Depending on the local radio market, this term could apply to certain types of religious programming.

The use of these noncommercial stations for training purposes varies from station to station. Some noncommercial stations are entirely run by students
(with a faculty advisor) or volunteers from the community, others are entirely run by professionals. There is no reason why stations with religious programming could not be operated by volunteers, etc. with appropriate supervision.

In conclusion:
1. I have no problems in general with religious programming on the noncomm
band, although I prefer music, local church services, and quality explanatory programs to the usual type of religious program.

2. All *genuine* not-for-profit organizations should have equal rights to the noncomm band. An organization's financial status, rather than its programming, should be the basis for determining whether it may use the noncomm band.

There

## 796. New AM to power up in Terre Haute

Newsgroup: rec.radio.broadcasting
Date: 1993-06-09 22:01:43 UTC
From: SEDV1.acd4.acd.com!jwg@acd4.acd.com
Message-ID: <C8DJuw.H4M@news.cso.uiuc.edu>
Source record: 43134

Contemporary Media, Inc., a Missouri-based company, is making plans to bring a new AM radio station on-line in Terre Haute, Indiana. Yep, you read that right, a new *AM*.

The company already owns Terre Haute stations WBOW-AM, a full-service at 640 KHz, and WZZQ-FM, a rock station at 107.5 MHz. Late last year, WBOW changed frequency from 1230 to 640, and at about the same time dumped most of its jocked programming for satellite, save live morning and afternoon drive.

The new station will reclaim 1230 KHz. Calls have yet to be announced. Speculation is that the station will be fully automated, and run satellite programming, most likely classic country. The #1 station (12+) in the market is WTHI-FM (99.9 MHz), a "hot country" station, which usually pulls a share in the upper 20s. The #2 is WZZQ, which came as close as it ever did to WTHI's heels in the spring '92 book, somewhere in the mid 20s. The "conventional widsom" says that by going classic country, the new station will clip the older WTHI listeners who probably identify more with the classic rather than the new country. This may very well make WZZQ the #1 station in the market.

And now, Jim Grey's editorial. I remind you that I work for WZZQ.

While I think that counter-programming with a classic country to snare those WTHI listeners who would prefer a more traditional country program is a good idea, I think this is a poor way to go about it. The listeners will certainly like the music, but may not like it that the new station has absolutely no local content. WTHI does a good job of being a "community" station, providing good news, information, and personality. People tune in to hear the news or catch the weather, and seem to really like the jocks. The new AM may carry network news and may draft WBOW's news department to provide (probably taped) local news, but the lack of local jocks and local information may well turn off the "older" crowd that they're trying to attract. My experience with the 40+ crowd is that they grew up on community full-service radio, and always want a station that fills that bill in some way.

[Moderator's Note: Nice to hear more from the industry in favor of live and local radio. Sad that the realities of small station ownership is that finaces often dictate the use of these satellite delivered formats. As I have said before, my biggest two gripes are that satellite feeds eliminate many entry and near-entry level jobs for up-and-coming air talent. The other problem is that the networks try to "fool" us into thinking it is live by never mentioning that they are a network, and inserting local ids into the fade-out of a song, (via control signals) in the DJ's voice. Could it be that even the Satellite providers know that local sells better than the opposite?

But sadly, I feel that most people want to hear "their" music and the station that provides the most of that product with the least interuptions will gain listeners. Like a post in the past said (paraphrased) "... radio is to many people like the electric company. It matters little who provides the service, as long as it is their when I want it... " Bill]

>"Radio Free Moosehead" sounds like as if it is supposed to sound like a
>pirate radio station, with the faint squealy sounds you sometimes hear with
>older short wave radios. "Interrupting all broadcasts, this is Radio Free
>Moosehead..
>These can be sort of fun to hear, instead of the usual painful commercials.

And therein lies one of the problems . Program directors and the folks who run radio stations forget that commercials are part of the programming too and the same elements that make people listen to other parts of the broadcast can make people listen to commercials too. That's good for the station, good for the advertisers. What a concept! Maybe someday copywriters will realize that lines like "plenty of parking for your convenience, friendly and courteous staff" and 45 seconds of product and price followed by telephone numbers isn't helping anyone. But --especially in smaller markets--try to convince the advertiser on Mainstreet of that!

Here in Washington, D.C., WJZE radio was sold this week. The new owners had apparently decided that despite it's high ratings, this format of Contemporary Jazz music is not good enough for this city. Thursday afternoon the format and call letters switched. It's now BIG. Big oldies all day long! Sounds pretty lame to me.

Anyways, we now have 4 oldies station serving this city (WBIG, WXTR, WARX, WINX) there might even be more. And we lost our only Contemporary Jazz station who had a 5.1 in the last ratings book. The only other station in town doing a similar format is WJFK radio but only during late nights and weekends. They have Howard Stern on from 6A-11A; G. Gordon Liddy on from 11A-2:30P; Don Geronimo & Mike O'Meara from 2:30p-7:00p; Doug (The Greaseman) Tracht from 7p- 11p; and Contemporary Jazz from 11p-6a and all weekend log.

You know if WJZE were losing money the change would make sense but they weren't. Two years ago when they first went with this format, their advertiserswere brin
were bring them $200,000 a month. Last month they averaged $500,000. Proof once again that you don't have to be smart to own a radio station, just rich!

[Moderator's Note: As much as I HATE their incessant use of the word "SMMMOOOTTH.... , I do hope that Chicago's SMMMmmoooth.. jazz station (WNUA) does not follow suit in colapse of this format nation wide. Our station is doing quite well, but as you point out that does not always mean that they stay with a format. Sure, daytime the station is more like a slightly jazzy Urban AC, but at night, it is nice, and even during the day, it is the most listenable thing somethimes. I wish I understood the psycology that will take a winning product and mess with it. WLUP-AM did it several times within a month or two and their ratings show a decline. Sad. Bill]

## 800. "Re: Sale of St Louis Noncommercial Station"

Newsgroup: rec.radio.broadcasting
Date: 1993-06-09 22:03:16 UTC
From: Robert Carpenter <rc@cmr.ncsl.nist.gov>
Message-ID: <C8DJxH.HB7@news.cso.uiuc.edu>
Source record: 43138

Will Martin <wmartin@STL-06SIMA.ARMY.MIL> ,
on the Subject: NonComm FMer for Sale in St. Louis
says (among other things):

> The St. Louis Board of Education has decided to sell the district's
> radio station, KSLH-FM 91.5, ending 43 years of operation.
>
> The board unanimously agreed Tuesday night to put the station up for
> bids with a minimum price tag of $250,000. The district has 180 days to
> sell the station or return to the board for further direction.
>>>> lots left out here
> But, anyway, this is on 91.5 MHz, in the non-commercial part of the FM
> band. So anybody buying it CANNOT make money off it. Therefore, asking
> $250K is a pretty effective filter to keep any impecunious private
> groups or radio enthusiasts from getting this. With these days of tight

Don't be so naive, Will, there's PLENTY of money to be made in "non-profit"
activities these days. Even 30 years ago, an entrepreneur I met said that if
he were going into business again, it would be as a non-profit, "because that
is where the money is." ie: pay the management well, have plush facilities,
and there won't be any profit......
Seriously, two of the local "below 92 MHz" stations take in more than
a million dollars (each) a year in listener pledges. That is before matching
funds and "underwriting" (advertising sales). "Enhanced underwriting" now gets
you up to about 30 second spots, with your business, product, slogan, phone
number, etc. Of course this is ENTIRELY noncommercial......

> groups or radio enthusiasts from getting this. With these days of tight
> budgets, it would be hard for another school to buy it. If the equipment
> isn't worth anything, and the tower site is not suitable for a
> higher-powered output (it's smack dab in the middle of a residential
> area), it would seem that all a buyer would really be getting is the
> license. And if they can't use that license to make money, who would
> be interested?

See above, re: making money.
Also, NTIA (which Al Sikes headed before the FCC) has provided matching funds
for creation/improvement of "public" radio station facilities for years. I'm
sure that it is a slow and painful task to get the money.

>>>>>> quite a but left out here
> this case, it looks to be inevitable that the only possible buyer that
> could justify to itself the cost would be a religious group which has a
> non-financial motivation to get a radio voice.

Not ALL stations run by religious groups fit the stereotype you imply.
WGTS-FM in Takoma Park, MD, is run the Seventh Day Adventists as a main-stream classical music station. Essentially their only religious programming is on the Sabbath (Saturday). They don't show up well in the listener numbers, but with 4 other classical stations in Washington/Baltimore, it's a hard market! I think they would be considered very good in many markets.
KLUX in Robstown (Corpus Christi), TX, is an easy listening station run by the Catholic Diocese of Corpus Christi. As I put it, the bishop seems to like roughly the same music that I do, though more lite rock was creeping in the last time I heard them. The "commercials" are generally of the be-morally-responsible, be-considerate-of-others tone; not religious hard sell.

> Regards, Will
Regards, Bob <w3otc@amsat.org>

## 801. DJs at San Franscisco FM station ticketed by police for stunt

Newsgroup: rec.radio.broadcasting
Date: 1993-06-09 22:03:23 UTC
From: wa2ise@netcom.com
Message-ID: <C8DJxn.HC4@news.cso.uiuc.edu>
Source record: 43139

Heard this on the news last night (caution, memory a bit fuzzy). Some DJs at KSFO? FM 105 were doing some stunt on a major bridge in the Bay area. The CHP (state police highway patrol) ticketed them for blocking traffic on the bridge. The newscast said that they could get a year in jail and fines. Looks like a rather poorly planned and researched promotion.

Note: I'm new in this town (SF, Silicon Valley) and I'm sure someone here can fill in/correct some of the details.

## 802. WBOS - does it exist?

Hi netters!

I am posting for a friend who has no net access....

Looking for air checks from 1968 from WRKO FM
^^

This is when they were a automated rock station, they billed themselfs
as RKO-matic...

Also Pete is looking for some air checks from WLS for the years
1968-1979. If you have any of these let me know, I will act as the
middle man. He has lots of other great stuff that can be traded for
this..

Thanks in advance!!

Andy

> terryw@clemson.clemson.edu

93.1 Amarillo is top 40 KQIZ "Z93." I heard them briefly a few weeks ago.
They seem more adult lately.

KGLS-93.1 is licensed to Pratt KS. They were satellite country last time
I heard them.

# 807. UK Student Radio - Part II (The Reply)

Newsgroup: rec.radio.broadcasting
Date: 1993-06-09 22:06:11 UTC
From: Nick Piggott <PNA@fs2.ee.umist.ac.uk>
Message-ID: <C8DK2B.HLL@news.cso.uiuc.edu>
Source record: 43145

Reply to mail from Gareth Noble, Radio Engineer, W963, Warwick, UK
==========

Gareth

Thanks for your mail and comments on my original posting. I think, however, that you may have missed my point, and the point that the British Government is ramming home at present which is that 'non-commercial' broadcasting is no longer acceptable. I'm not going to elaborate on my personal views over this, but I was recently dumped by a well known British Broadcasting Coporation which is currently being franked up the arts by the government.

The Radio Authority is not asking student radio station to find thousands and thousands of pounds - they are asking for freely radiating stations to be properly managed and responsible organisations, who can be trusted with 'proper' frequencies; part of these responsibilities involves paying copyright dues, abiding closely to the Broadcasting Act, and generally running a 'sound ship' (apologies for the pun there!)

Sadly, many student radio stations suffer from their links with student unions - otherwise excellently well run radio stations are used as political pawns or otherwise left to be kicked around the pitiful arena of student politics. Needless to say, the Radio Authority views this with understandable horror - we all know what ridiculous things some students get up to in the name of 'politics'. Also, without a proper legal structure, holding people properly responsible for their actions is very difficult. With MCR, every time the mic is opened, its me and my fellow directors nuts' that are on the line, and we make sure that the staff know that what they say, they have to justify fully to us and the Radio Authority.

MCR, as you say in your mail, is a very special case at the moment. We have always run commercially as a limited company, with young people at the helm, and on the board. We sell airtime, lease premises, and hopefully starting next month, pay people!

I think a better precedent has been set by Pitlochry & Aberfeldy Radio in deepest, darkest, remotest Scotland (look on your British Rail Atlas - it's not on road maps). A population of 10,000 now has a FM radio service, running from Friday to Sunday evening. The licence costs them stlg500 a year, they pay almost no copyright because they have almost no commercials, and everything else has been donated or paid for by members (the studio is a pair of SL1200's, a Denon CD, and a Phonic disco mixer).

But the IMPORTANT aspects are these:
- they BID for it, and satisfied the Radio Authority that they were fit to run a station.
- they are CONTRACTED to provide a certain level of service.
- and they're PAYING for it.

If you want a more metropolitan example - look at Harlow 1017 (FM) in North Essex. The licence was won by the local hospital radio group, who provide 39 hours a week of locally sourced programming, the rest coming (free) from Essex Radio, who also provided a lot of services at very competitive prices! I believe Harlow's licence costs about stlg1,000 a year.

My point is this - change your approach - meet the Radio Authority on their terms, because approached from the right direction, their terms will encompass your requirements. The Radio Authority is a government body with a statutory responsibility to issue all UK commercial radio licences on a competitive basis - NO exceptions! Show them that you are serious about radio, and give them a chance to work within their statutory confines.

It's very much a case of 'if you can't stand the heat, get out of the kitchen' - because the fire is going to be stoked up whether you like it or not.

Sorry to bore all our US listeners, but we're undergoing a painful growth process here - hopefully our student radio will end up as well respected and widespread as yours!

[Moderaters Note: I doubt that anyone is bored. I know I am not. I love hearing stuff from another nation. Keep it up!. Bill]

# 808. "Re: Sale of St Louis Noncommercial Station"

Newsgroup: rec.radio.broadcasting
Date: 1993-06-09 22:07:14 UTC
From: Robert Carpenter <rc@cmr.ncsl.nist.gov>
Message-ID: <C8DK42.HoM@news.cso.uiuc.edu>
Source record: 43146

Will Martin <wmartin@STL-06SIMA.ARMY.MIL> ,
on the Subject: NonComm FMer for Sale in St. Louis
says (among other things):

> The St. Louis Board of Education has decided to sell the district's
> radio station, KSLH-FM 91.5, ending 43 years of operation.
>
> The board unanimously agreed Tuesday night to put the station up for
> bids with a minimum price tag of $250,000. The district has 180 days to
> sell the station or return to the board for further direction.
>>>> lots left out here
> But, anyway, this is on 91.5 MHz, in the non-commercial part of the FM
> band. So anybody buying it CANNOT make money off it. Therefore, asking
> $250K is a pretty effective filter to keep any impecunious private
> groups or radio enthusiasts from getting this. With these days of tight

Don't be so naive, Will, there's PLENTY of money to be made in "non-profit"
activities these days. Even 30 years ago, an entrepreneur I met said that if
he were going into business again, it would be as a non-profit, "because that
is where the money is." ie: pay the management well, have plush facilities,
and there won't be any profit......
Seriously, two of the local "below 92 MHz" stations take in more than
a million dollars (each) a year in listener pledges. That is before matching
funds and "underwriting" (advertising sales). "Enhanced underwriting" now gets
you up to about 30 second spots, with your business, product, slogan, phone
number, etc. Of course this is ENTIRELY noncommercial......

> groups or radio enthusiasts from getting this. With these days of tight
> budgets, it would be hard for another school to buy it. If the equipment
> isn't worth anything, and the tower site is not suitable for a
> higher-powered output (it's smack dab in the middle of a residential
> area), it would seem that all a buyer would really be getting is the
> license. And if they can't use that license to make money, who would
> be interested?

See above, re: making money.
Also, NTIA (which Al Sikes headed before the FCC) has provided matching funds
for creation/improvement of "public" radio station facilities for years. I'm
sure that it is a slow and painful task to get the money.

>>>>>> quite a but left out here
> this case, it looks to be inevitable that the only possible buyer that
> could justify to itself the cost would be a religious group which has a
> non-financial motivation to get a radio voice.

Not ALL stations run by religious groups fit the stereotype you imply.
WGTS-FM in Takoma Park, MD, is run the Seventh Day Adventists as a main-stream classical music station. Essentially their only religious programming is on the Sabbath (Saturday). They don't show up well in the listener numbers, but with 4 other classical stations in Washington/Baltimore, it's a hard market! I think they would be considered very good in many markets.
KLUX in Robstown (Corpus Christi), TX, is an easy listening station run by the Catholic Diocese of Corpus Christi. As I put it, the bishop seems to like roughly the same music that I do, though more lite rock was creeping in the last time I heard them. The "commercials" are generally of the be-morally-responsible, be-considerate-of-others tone; not religious hard sell.

} From: "Gil Kloepfer Jr." <gil@limbic.ssdl.com>
} Subject: Substitute for welding rods?

} In the FAQ, Mycal describes a ground-plane antenna design which uses
} welding rods as the radiators. I have used #12 solid copper
} wire stripped from a piece of regular Romex-type house wire. Will
} this work as well? Has anyone tried this yet and had any success?
}

Gil -

Electrically, #12 copper should be OK, but stiffness will be lacking. Welding rod stands up better in the weather.

Here's an idea when you're ready for MORE POWER. Check out FM broadcast antennas for fringe reception (long yagi types). Back in the early 1970's, I bought one (I think it was a Winegard FM-10); it had at least 10 elements, and over a ten foot boom, with a gain of at least 8db. One drawback was the 300 ohm feed, but I used a common 75 to 300 balun with 75 ohm cable TV coax to feed it; no problems.

My experience with this antenna was spectacular! I had been using a very simple (two transistor) FW wireless mic, with a short (18") antenna. On a good day, it had a range of maybe 200 feet. Connecting the mic to the yagi (on a 40 foot tower) extended the range to THREE MILES. Now that's some serious gain! I never got around to building an amp for it, but it could have been dangerous! Another tweak is to mount the yagi vertical, instead of horizontal; this should be good for another 6 db, assuming your receive antennas are also vertically polarized (portables, car radios, etc).

You didn't hear it from me...

Roger

# 811. The Power of Voice - InteRadio

Newsgroup: rec.radio.broadcasting
Date: 1993-06-10 12:43:59 UTC

```
/* ---------- "The Power of Voice - InteRadio" ---------- */
Editorial: The power of voice
==============================

More than any other mass communication medium, radio is
accessible, affordable, and easily appropriated by groups of
people whose demands have traditionally been ignored by the
mainstream media. Many marginalized groups are turning to
community radio as a forum for expression, by-passing the
corporate and State media rather than fighting to access them.
Community radio advocates often speak of the need "to have a
voice" and of the necessity of establishing community stations as
independent voices. Community radio has also become known as the
"voice of the voiceless" in many parts of the world.
However, while the term "voiceless" may well refer to those who
have traditionally been denied access to the media, labelling
community radio as the "voice of the voiceless" demeans the very
essence of community radio.

The phrase "voiceless" overlooks centuries of oral tradition
which preceded radio technology (traditions which are especially
strong in Asia, Africa, and among indigenous populations). It can
also be interpreted as implying that people do not have a voice
in their communities and in their everyday lives unless they have
some kind of access to the media. True, community radio
facilitates the expression of this voice; but it does not create
it.

The issue of "voice" versus "voiceless" is not one of semantics.
It lies in a question of access and power, as opposed to a simple
need or ability to speak out. Every person has a voice from the
day he or she is born - the issue at hand is assuring that these
voices are able to be expressed and be heard in broad, open
forums, community radio being one of them.

The issue of voice - of speaking out - cannot be overlooked in
the context of an international push toward democratization.
Unfortunately, a proliferation of commercial media is often
confused with democracy and freedom of the press - resulting in
the concentration of the broadcast media in the hands of fewer
and fewer corporations. In addition, many so-called democratic
governments are still clinging to legislation which prevents or
limits access to community radio.

If the community radio movement is to flourish and fulfill its
mandate of promoting popular access to the airwaves, it must
```

fight not only for its legal recognition, but against media concentration, and in favor of pluralism in general and on the airwaves of community stations.

Lisa Vinebohm

The current issue of InteRadio (Vol. 5 No. 2) attempts to examine at the issue of voice: in Latin America, where "fantasy voices" in radio dramas are being used to educate and raise consciousness; in Australia, where indigenous people are fighting a legacy of racism to access the country's community stations; in Canada, where French-language radio is being used to combat assimilation; and in Mali, where Radio Bamakan is working to defend the country's fledgling democracy. This issue also deals with legislation which is potentially limiting to community radio, in the Republic of Ireland, Poland, Chile, and the countries of the European Economic Community - as well as South Africa, where community broadcasting is still forbidden by law.

```
/* ---------- "Radio Pacifica Station Guide" ---------- */

If there is a Pacifica Radio station in your vicinity, and if
you would like to hear the Gary Null Show, broadcast by satellite
to that station, you can write Gary Null's office in New York City
at:

P.O. Box 918
Planetarium Station
New York, NY 10024

Give your name, address and/or phone number with a
message of support, if you wish, or a message of intent to get
together with a few friends and neighbors to urge your local
station manager to air the program.

John DiNardo

[NOTE: if your local community radio station isn't getting deserved
state and other federal funding, find out why. Organize a campaign
to break the deadlock and have the funds placed where they will do
the most good. Remain vigilant that, with the receipt of federal
funding, there isn't an attempt to censor station programming.

Frank Starr

## 813. Seeking Radio Station History (Factual, that is)

Newsgroup: rec.radio.broadcasting
Date: 1993-06-10 12:44:15 UTC
From: barry@jab.tucson.az.us
Message-ID: <C8Eopr.CCq@news.cso.uiuc.edu>
Source record: 43051

[Moderators Note: The following is an exerpt from an email letter I received from Barry Mishkind. He is seeking some assistance on a project. It is my distinct impression that Barry only wants to deal with *real* historical insights. So if you choode to respond, be sure of the facts. Bill]

=== Begin quoted text ====

To better explain: For some time, I've been trying to finish compiling a listing of stations on the air in 1928, and provide it as a trivia guide/resource for people interested in the origins of our industry. The project has grown a bit, as Scott and I discuss the relative benefits of talking about the state of the industry in 1941 (after) the big frequency reassignment of the 40's (remember it also happened in the mid twenties, when most stations were moved from 360 and 485 m.), or in the early 50's when the big increase in station count happened (after WWII).

At any rate, a lot of the local flavor of the early stations will need to be dug up, sign on dates, sign off/deletion dates (WIBO and WPCC were ordered off the air in 1933 - indeed it went to the SCOTUS - since CHicago was "overquota"), colorful owners/managers, local "wars" ..

All in all, it seems this has evolved into more than a simple FAQ as started, and become a more valuable resource. I intend on putting it up as an FAQ item to be FREQed or FTPd ... or distributed as shareware, to cover the cost of diskette and postage, etc. As I said, it may become either a series of projects or a more complex one with a stripped version as the FAQ.

(Call letter meanings - or rumor thereof are another "area" that can be included, and is already in the database to an extent.)

So, I thought that even if you are not an old codger (I'm 44) ... you might know the people in the market to ask about some of the old stuff.

Using you as a resource, Scott, some guys in Fido on the left coast and in the SE ... the whole project might get more data than just one person researching....

Source record: 43053

Can anyone provide any detailed information on an old radio series entitled THE JEWISH CAVALCADE (or possibly CARAVAN) OF STARS?

To the best of our recollection, this variety show aired in the late 50's (perhaps the early 60's), and it was broadcast in the New York area on late Sunday mornings or early Sunday afternoons, possibly on the now-defunct WNBC-AM.

Info regarding the format, host, frequent stars, distribution, years on air, station(s) which aired it, etc. would be greatly appreciated!

Ellis Bromberg Phone: (217) 333-1070

From: slutsky@tesla.njit.edu
Message-ID: <C8Eoqq.CFF@news.cso.uiuc.edu>
Source record: 43052

Bob Fitzsimmons of WNEW-AM fame died on Wednesday June 2 in New York City. He was the morning man on WNEW-AM from 1989 until the station's demise in late 1992. He began his broadcasting career in 1962 as an assistant to Ted Brown and William B. Williams at WNEW. He appeared as the character Trevor Traffic with the team of Gene Klavin and Bob Finch. Bob later appeared on WRKL in Rockland County, NY, WFMJ in Youngstown, Ohio, and WPEN in Philadelphia. From 1970-73 he was a talk show host for WHN in New York before returning to WNEW. Before returing to WNEW in 1989 he was a talk show host and announcer for WABC. Fitzsimmons was 53 when he died.

/* ---------- "Community Radio Station WMNF" ---------- */
/* Written 7:44 pm Jun 7, 1993 by odin@world.std.com in web:media.issues */
/* ---------- "Community Radio Station WMNF" ---------- */
>>>> Hank Roth <odin@world.std.com>

The following article appeared in the May 26 issue of Creative Loafing newspaper of Tampa, Florida. Copyright 1993 by the authors, Mike Waldrop & Michael Upledger. Transcribed with the author's permission.

Community Radio Pays the Price
by Mike Waldrop & Michael Upledger

There are 12 radio stations in Florida that offer public broadcasting. Each station is eligible for state funds through a Florida Public Broadcast System (FPBS) created by the state legislature in 1973. And every year, each station gets a piece of the pie - except one.
The lone, un-funded station is the Bay area's own WMNF (88.5 FM). This past year, the state legislature alloted $1.1 million dollars for public radio, doling out over $100,000 per station. WMNF got zip. Why?
Finding an answer isn't easy, but our search uncovered the alarming stink of ideological censorship within the state's public broadcasting system. We also encountered surprising examples of ignorance and evasiveness among two local politicians who exert the most control over WMNF's state funding.
WMNF bills itself as a "community radio station". Of the 12 FPBS stations, WMNF alone reaches virtually every segment of society and attracts the only measurable minority audience. The diverse musical programming includes bluegrass, new age, folk, rap, metal, big band and a generous selection of local artists. The audience is as diverse as the music: rich and poor, white and black, young and old.
In contrast, the 11 other FPBS stations offer a combination of classical music and jazz. Their audiences are overwhelmingly white, elderly and upper-class.
No problem here, as even Dr. Warren Clark, Chairman of WMNF's Bord of Directors, believes that the station's lack of funding "has nothing to do with the music we play."
The station carries its "community radio" ideal into its news and public affairs programming, however.
"We are a station that provides alternative news that you will not get anywhere else," Clark says. This includes broad

coverage of minority issues - gay rights, migrant workers' conditions, ethnic affairs - and programs offering alternative political voices from radical leftists and rightists, populists, libertarians and socialists.
While there's a distinct line between airing alternative views for public education and actually endorsing any such views, the difference is often lost among easily-offended or ideologically-rigid people. And WMNF, it seems, is paying the price.

UH-OH

The story begins in the mid '80's, when WMNF became eligible and applied for state FPBS funding. Typically, a new "applicant" simply needs the support of a local legislator to add the station to the current appropriations bill and champion the cause on the floor. WMNF found its advocate in 1989 with Senator Helen Gordon Davis (D, Tampa), who sponsored an amendment to include WMNF in the 89-90 fiscal budget. Senator John Grant (R, Carrolwood) signed on as a co-sponsor.
The amendment was sailing along smoothly and WMNF's funding seemed imminent until Senator Malcolm Beard (R, Sefner) took the floor during full-session and attacked, stating that WMNF was a gay radio station and not deserving of public funds.
"Beard opposed the funding because he believes they are a radical radio station," Gordon Davis recently explained. She recalls that when Beard referred to WMNF as a "gay" station, she responded "No Senator, I think you mean they play reggae."
Louis Putney, a local attorney and member of WMNF's Board of Directors, was in the Senate Gallery during the session.
"Beard was homophobic in his approach", Putney remembers. "He completely derided the station from a conservative viewpoint ... (and) having a local senator speak against the station was damaging."
Beard's view was possibly based upon "Out In The Open", a half hour monthly program WMNF airs concerning gay issues.
Meanwhile, Senator Grant silently withdrew his support for the amendment.
Despite Beard's efforts, the Senate accepted Gordon Davis' amendment and sent the entire appropriations bill to (then) Governor Martinez. Again, WMNF's funding seemed imminent - at least until Martinez singled out WMNF with a line item veto before signing the package.
The '89-90 fiscal year was the closest WMNF ever got to sharing in the state's FPBS budget. Each year since, the station has applied but been passed over.
"It's like batting in the dark," WMNF News Director Rob Lorei says. "No one has given us a solid answer to why we don't receive funding."
Eric Smith, the state's Administrator for Public Broadcasting, blames the state's continually tight budget.

Others involved say that adding WMNF would take monies away from existing FPBS stations, which would be unfair. Yet two new FPBS stations have been added to the state fund since 1990 without challenge.
It seems apparent that there's something more to the story. Senator Beard's active opposition in '89 hurt, but what about Martinez' veto? And why did Senator Grant cool on a cause that would bring an annual $100,000 into his home district?

FUN & GAMES

Beard's story would be comical were he not a public official in control of policies and dealings that affect Tampa Bay. After several weeks of getting nowhere on the phone at his local office, we asked his staff for the fax number so we could send the Senator a short list of questions. At first, we were told there was no fax line. After ascertaining that this was untrue, the staff told us that they were "unauthorized" to give us the number. We finally got it through a friendly source and sent the questions.
Beard then called us back rather promptly, and tried to smooth over the "misunderstanding". He said the fax line was just installed that day, to which we replied that the number was at least several years old. He quibbled a bit, then forcibly changed the subject.
Regarding WMNF, Beard said that he had never heard of the station, and had certainly never opposed any funding for it. He said that anyone who said he had was a "liar". We mentioned that his comments were a matter of public record and that we had a tape recording of the floor debate in which he said WMNF was a gay radio station, etc., etc.
Beard then said he HAD opposed funding WMNF in the past and would continue to do so in the future.
We asked why. He said "I don't know."
By then, he was really angry. He said he had never listened to the station and had never called it "gay" - at least not publicly. We asked him some more questions, which he said were "stupid and ridiculous", and then he hung up.

CALLING SENATOR GRANT...

Reaching Senator Grant proved more difficult --- in fact, we never spoke to him at all. We did, however, spend a month talking with his aide, Will Craig.
We told Craig that we wanted to know why the Senator wasn't supporting WMNF's application for FPBS funding, and why he had withdrawn his co-sponsoring of Gordon Davis' amendment. Craig told us that there was probably something else tacked on to the amendment that Grant didn't like, and that if we would get the specific bill and amendment numbers for him, he would check the Senator's journal and find out.

We dug up the specifics and gave them to Craig (there didn't appear to be any "extras" tacked on). He said he'd check it over the weekend and have the Senator call us the following Monday or so.
By mid-week, we hadn't heard back from either Craig or Grant, so we called to find out what was up. Unfortunately, Craig was away on a week's vacation and the other aides were reluctant to step in. We waited a week and tried again, but Craig was out sick.
After a few days, Craig was back on the job, but very busy catching up on his backlog of work. In fact, each time we called, he was on another line and apparently too busy throughout the day to get back to us. Eventually, we just faxed him a note reminding him of our interest, but he was still too busy to respond.
We finally gave up, though we regret Senator Grant didn't get a chance to speak with us. The only public comment we could find that Grant made concerning WMNF appeared in a Channel 10 news story from '91. Asked why he didn't support funding, Grant somewhat obliquely hinted that he opposed the station's position on abortion. (The station has no official "position" on abortion.)

POLITICS, AS USUAL

In talking with various pols, lobbyists and WMNF people about the situation, the name Joe Cortina Jr. kept popping up. Cortina is a fairly well-known and influential figure in local right-wing circles. He describes himself as a businessman and a "professional intelligence analyst." By his own account, he was involved in business trade with Nicaragua and linked with Oliver North and the Contra re-supply network during the '80's.
To put it mildly, Cortina hates WMNF, which he describes as "pro-Sandinista," "enemies of traditional American values and democracy," and a "Marxist radio station that does not have the right to taxpayer's money."
His anger is based on the station's coverage of the Nicaraguan civil war and the Iran-Contra Hearings, which WMNF broadcast in full. The station also aired numerous reports highly critical of the Reagan-Bush Administration from sources that claimed the U.S. was involved in Central American murders, drug trade and other covert affairs during the same time period.
"I hope (WMNF's) building burns down in the middle of the night," Cortina recently told CL. "I hope the worst of the worst happens to them."
Cortina actively organized local Cuban/Latin and conservative opposition towards FPBS funding for WMNF, including lobbying Governor Martinez in '89 with a phone campaign. At the time, Martinez commented only that WMNF was not in his original budget request that year.
Cortina also acknowledges lobbying the local legislative

delegation against the station. WMNF's Lou Putney recalls sitting in Grant's office when Cortina phoned to persuade Grant to withdraw his support of Goron Davis' amendment to fund the station. Grant, for reasons yet unstated, withdrew his support shortly thereafter.

At the bottom line, we can't confirm whether political activists derailed WMNF's funding, but still no one has explained why WMNF is overlooked by the state's FPBS year after year.

We do feel that WMNF provides a much-needed and important forum for all voices in the community - Jewish, Christian, gay, feminist - and not just leftist or radical. Ironically, Mr. Cortina himself has been a repeat guest on WMNF, espousing his pro-Contra views on the very airwaves he hopes to destroy.

Out of this jumbled situation, we're left with three main considerations: First, that state funding for public broadcasting stations should have absolutely no political considerations or reprisals, and anyone attempting to circumvent that should be exposed and stopped; second, since public tax dollars are used to fund FPBS, WMNF deserves an equal share of the monies, especially since WMNF serves the broadest based audience of all the FPBS radio stations; third, if our local politicians are unable to separate the station itself from the views and politics of its diverse guests and programs, and if a politician is willing to actively oppose WMNF without even having heard a single broadcast, then we definitely need new political representation for our community.

END OF ARTICLE

---

ACTION REQUESTED: Please pass copies of this article to anyone whom you think might be interested. Whether you are a resident of Florida or not, this sort of precedent should not stand. Please write a letter expressing your desire to see WMNF permanently funded in Florida's FPBS budget, to the current governor of Florida. Evidence of widespread publicity of this situation should make the governor rethink his suppression of a true public interest radio station.

Address: Governor Lawton Chiles

## 817. Availability of CBC Radio Programmes in the UK

Newsgroup: rec.radio.broadcasting
Date: 1993-06-10 12:45:05 UTC
From: "Tony (A.T.) Palik" <tpalik@bnr.ca>
Message-ID: <C8Eor5.CIB@news.cso.uiuc.edu>
Source record: 43055

Over the years I have developed a fondness for several Canadian
Broadcasting Corporation Radio shows. I will be moving to the
UK in two months and I'm wondering if aside from RCI (which
covers very little) are there any sources of Canadian
domestic programming. I know for example, theat NPR in the
US carries 'As It Happens' on a daily basis.

Thanks in advance. I don't anticipate much interest in this
but can post a summary to the group if anyone wants.

```
/* ---------- "Indigenous Radio in Australia" ---------- */
Kicking open doors:
The struggle for indigenous media in Australia
==============================================

There are three types of community broadcasting in Australia:
general public broacasting, ethnic broadcasting, and aboriginal
broadcasting. In 1992, the government allocated some $100 million
dollars a year to the non-ethnic, non-aboriginal sector, and $65
million a year to ethnic broadcasters. Only seven million dollars
was spent on aboriginal broadcasting.

There are three exclusively indigenous radio stations (in Alice
Springs, Brisbane and Townsville), and one indigenous community
television station (Alice Springs) in the country.

Tiga Bayles is the Chairperson of the National Indigenous Media
Association of Australia. He also works with the Brisbane
Indigenous Media Association, and is AMARC's vice president for
Oceania. In the following article, based upon an interview, he
describes the oppression suffered by Australia's aboriginal
population, and their struggle to access to the media, community
radio in particular.

"Up until twenty-five years ago aboriginal people were not
counted in the census, we were not allowed to vote. We were not
recognized as people.

"The racism has been very severe. Australia is a well-developed
country but we have Third World problems in our communities. Life
expectancy for indigenous adult males is 20 years shorter than
for non-aboriginal people. The rate of imprisonment of Native
people ranks among the highest in the world; two per cent of the
17 million people in Australia are aboriginal, yet in some of the
jails up to 75 per cent of the jail population is indigenous.
It's a racist criminal justice system that puts my people in
jail. About 75 per cent of our people are unemployed. Generally
we are denied basic human rights as defined by the United
Nations.

The need for aboriginal media:

"We make it into the media when there are negative issues to be
presented. Negative aspects of the aboriginal community are
sensationalized. The negativity, bias and misrepresentation in
the media has forced aboriginal people to look around and see
```

what media resources we can access ourselves.

"We identified public radio - community radio - as a vehicle for us to get some information out. We've come up against some very racist people who manage community radio stations. Some of them tried to deny us access by saying they don't want to carry an aboriginal program; or they say they want to have control over what goes to air; or they say it will cost us 5000 dollars a year for an hour-long, weekly program.

"There have been various obstacles put in our way. But over time we've managed to break down some of these obstacles and kick open some of the doors of radio stations around the country, and to allow access for more aboriginal community groups around the country.

"At the moment there are about 105 public radio stations in the country. Aboriginal people have access to about 25 per cent of them, and it's growing each year.

"The National Indigenous Media Association of Australia (NIMA) was established in May 1992. It's a national umbrella organization with a membership of 136 community broadcasting groups. Its long-term aim is to distribute funds to indigenous community broadcasters throughout our country.

"The government is starting to recognize the importance of the media - to see how aboriginal radio can work for government agencies. As a result, we're getting some formal recognition. We've been able to establish the national organization with some government support to set up a secretariat.

Breaking the cycle of ignorance

"The national body is trying to promote aboriginal access into public radio stations. It's important not only as a training ground, but to get our information out, to break the cycle of ignorance within mainstream society. With positive information being projected by aboriginal people, we're going to help develop an understanding and respect. It offers us a platform for our artists, musicians, writers; we have a wealth of talent in our communities."

"Radio - the medium - is a very important vehicle for indigenous people in my country and the world over."

# 819. AMARC's Board Meets

Newsgroup: rec.radio.broadcasting
Date: 1993-06-14 04:39:15 UTC
From: resystom@web.apc.org
Message-ID: <1993Jun14.043915.29590@gagme.chi.il.us>
Source record: 43057

/* ---------- "AMARC's Board Meets" ---------- */

Planning priorities: AMARC's Board of Directors sets the tone
==========

Early in March, representatives from five continents sat around the same table, sheltered from the cold and the raging Montreal snow-storm outside. It was the first meeting of AMARC's Board of Directors, elected last August at AMARC 5. All 11 members attended.

These meetings are an intensive time for reflection, exchange, and work, often extending late into the night, despite the jet-lag, climate and culture-shock experienced by people arriving from all over of the world. They allow for a tour of the international community radio landscape, and for determining AMARC's activities in the various regions and sectors, while examining the basic regulations and structures of AMARC's day-to-day operations.

Priorities: the regions

The current phase of AMARC's development is marked by the rapid growth of regional offices in Latin America and Europe.
The first regional office was established three years ago in Peru, to serve Latin America. Above all, the office offers services to members: training, exchanges of radio programs and material, consultation services, co-operation with other Latin American networks. The fact that Latin America has the highest number of AMARC members (170) is proof of the dynamism of that continent's movement.

AMARC's European office was recently set up in Sheffield (England), with the support of the Community Radio Association.

Africa: A pan-African network of participatory radio producers was established in June 1992, and an African office is planned be set up in the near future. The Pan-African Network coordinators met in May, to plan AMARC's actions in Africa. It was decided that AMARC 6 will be held.in Burkina Faso, in late 1994. Another meeting was held in Namibia, in collaboration with UNESCO and CIERRO, bringing together representatives from fifteen countries, to examine the possibility of establishing a training center to serve English-speaking African countries.

Asia: AMARC activities have been sparse to date. An Asian Working Group was established at AMARC 5. The plan of action for Asia

includes looking at the situation of community radio across the continent, training, and a regional meeting.

North America: a wide variety of community radio stations and associations can be found in this region; promoting AMARC and developing closer links with these groups will lead to the elaboration of more concrete North American activities.
Oceania: most of AMARC's contacts to date have been made with Australia. The Board looked at how AMARC can integrate the various experiences there, and offer its network to support aboriginal radio.

The Women's Network: A number of possible initiatives were presented, such as training workshops on all continents, exchanges of written and audio material, participation at international meetings, and links with other international networks.

Indigenous radio: Pressure for the recognition of Native communication is being exercised in Bolivia and Australia. A meeting of Latin American native stations is planned to take place in June, in Bolivia.

Other Projects: These include support for the installation of a community station in El Salvador; the establishment of an alternative community news service in conjunction with Inter Press Service; and the development of a new AMARC communication strategy.

These are the main tasks on AMARC's plate for the next two years. The challenge now is to secure funding for these activities, to consolidate the secretariat and the regional offices, and improve communication among the various bodies of AMARC... without forgetting the ideal of democratic communication in pluralistic societies.

Evelyne Foy

Yes, WBOS-FM Boston is at 92.9 FM with somewhere around 8-10KW (I can't
recall excactly). It has a soft AOR (interesting description) format.

## 822. Money to start a radio station

Newsgroup: rec.radio.broadcasting
Date: 1993-06-14 04:40:13 UTC
From: moeller@cis.ohio-state.edu
Message-ID: <1993Jun14.044013.29665@gagme.chi.il.us>
Source record: 43060

Well, I'm not quite sure whether this is the apropriate newsgroup
for my question, but let's try it (which one would be better ?).

We want to start a radio station (non-commercial/non-profit; run
by volunteers, mostly students) and need (for sure) a lot of money.
I've heard that there are grants out there.
But I just don't now, what kind of grants, where do we have to apply,
how long will it take, what are the requirements etc.

If some kind 'netters' could help me/us, we greatly appreciate it.
Also: if some of you had experiences with setting up a radio-station -
do you have some great ideas HOW and from WHOM to raise money ??

So please feel free to flood my mail-box with interesting informations:
moeller@cis.ohio-state.edu

Thank you very much again,

Torsten Moeller

## 823. WZRC and Infinity Broadcasting

Newsgroup: rec.radio.broadcasting

Source record: 43061

My friend over at WXRK (92.3 K-Rock, New York) says that the country music format at WZRC (1480, New York) is just being used to fill air until the next format change. Infinity Broadcasting is going to be leasing the transmitter and frequency to another group who is going to put on a Korean radio station programmed out of their own studios. I think it will work.

# 824. Re: Community Radio Station WMNF

Newsgroup: rec.radio.broadcasting
Date: 1993-06-14 04:44:18 UTC
From: bbs-hrick@jwt.oau.org
Message-ID: <1993Jun14.044418.29796@gagme.chi.il.us>
Source record: 43063

I listen to WMNF from time to time (they're audible at night here in the Orlando area). If they really have the diverse, widespread community support indicated by the article posted, why do they even _want_ government money? Frankly I'm sorry to hear that the state government is taking tax money from productive people and giving it to frivolous, unnecessary projects like radio stations. If a radio station (or anything else) cannot survive on its own in the free and open marketplace, then it deserves to become extinct.

[Moderator's Note: Then I am sure you would agree that since the Internet receives the majority of its support from the National Science Foundation (A tax puuorted agency) that IT should become extinct. I notice that YOUR login is not on Compu$erve, where you pat-to-play, but on a public access Internet site where one pays a small annual cover fee to access millions of dollars in connectivity and bandwidth, paid fo *primarily* by the NSF and major universities across this planet. Bill]

# 825. Re: Indigenous Radio in Australia

resystom@web.apc.org (Bruce Girard) writes:

>There are three types of community broadcasting in Australia:
>general public broacasting, ethnic broadcasting, and aboriginal
>broadcasting. ^^^^^^^^^^
^^^^^^^^^^^^^^ ???

News to me, and I have been in the industry for almost 10 years.

>In 1992, the government allocated some $100 million dollars a year to the
>non-ethnic, non-aboriginal sector, and $65 million a year to ethnic
>broadcasters. Only seven million dollars was spent on aboriginal
>broadcasting.

Let me say 2 things;

1. The "GOVERNMENT" has not not, and will not EVER spend $172,000,000 on public radio of any sort! - I have no idea of your source, but it is grosely wrong.

2. Even if the "GOVERNMENT" did hand out such sums of money (which I can assure you they don't!) surly $7,000,000 is a fantastic budget for 3 stations!

>There are three exclusively indigenous radio stations (in Alice Springs,
Brisbane and Townsville), and one indigenous community television station
(Alice Springs) in the country.

Note: The "Idigenous TV" station, was the first (full time) public TV in Australia's history, it's taken the city almost 10 years to catch up with what you have in the bush. (also rember; city: 10W Bush: 250KW!)

>Tiga Bayles is the Chairperson of the National Indigenous Media
>Association of Australia. He also works with the Brisbane
>Indigenous Media Association, and is AMARC's vice president for
>Oceania. In the following article, based upon an interview, he
>describes the oppression suffered by Australia's aboriginal
>population, and their struggle to access to the media, community
>radio in particular.

[ non radio text removed ]

>two per cent of the 17 million people in Australia are aboriginal,
(That's under 1/2M people, and you say a $7M budget is not enough?!)

>Generally we are denied basic human rights as defined by the United
>Nations.

Yes, I guess the fact that it is easier for an aboriginal to get into uni, and the fact that aboriginies get a higher social security handout that the rest of the country would say this also ?!

The need for aboriginal media:

>"We identified public radio - community radio - as a vehicle for
>us to get some information out. We've come up against some very
>racist people who manage community radio stations. Some of them
>tried to deny us access by saying they don't want to carry an
>aboriginal program;

Unfortunatly you are not the only ones to be affected bu this, it is not illigal for a public radio station manager to say they don't want you, they don't even have to give a reason, why do you think you hear such little youth access on Australian public radio? - the stations are ushally run by old (retired) men, and they say "ohh, we don't want that boom boom music" end of story, even the "GOVERNMENT" isn't interested, their line is "Community/Public radio is self-policeing"

>'they' say they want to have control over what goes to air.

If your name was on the licence, so would you.

>or they say it will cost us 5000 dollars a year for an hour-long, weekly
>program.

That's apx. $100 a week, sell four $25 slots, and your done! - you can't expect that because your aboriginal everythings going to be free!

>"At the moment there are about 105 public radio stations in the
>country. Aboriginal people have access to about 25 per cent of
>them, and it's growing each year.

That's 26 radio stations, broadcasting to olny 340,000 people TOTAL accross Australia (your figures rember!) That's 1 station per 13,000 people (but they are spread accross the country rember!) - if the same applied to "WHITE AUSTRALIAN" their would be 1,281 public radio stations, and 50 public TV stations.

>"The National Indigenous Media Association of Australia long-term aim is
>to distribute funds to indigenous community broadcasters throughout our
>country.

Great to hear for 2 reasons; 1: Most stations "DIE" due to lack of funds. 2: The Australian people are getting sick of "Hand out groups".

> Breaking the cycle of ignorance

>With positive information being projected by aboriginal people,

(Information projected by aboriginal people? Isn't that recist within itself?)

>we're going to help develop an understanding and respect.

(If you want respect, no handouts)

AMARC & Others,
You might say I was rather harsh in some of the comments I
have just made, but I've been in the industry (in Australia) long enough to
know fact from fiction, and sort out emotion from logic.

If you are outside .AU you can send E-MAIL, all .AU replies I will expect by
phone (voice A/H) only.

Justin (Justin@stock.apana.org.au) - I'm in the book.

## 826. Cheap Radio Tricks

Newsgroup: rec.radio.broadcasting
Date: 1993-06-14 04:44:49 UTC
From: "A.J. Janschewitz" <p00445@psilink.com>
Message-ID: <1993Jun14.044449.29879@gagme.chi.il.us>
Source record: 43065

Imagine the anger of local television stations when the mysterious "men in white" who had been driving around greater Hartford handing out $50 bills held a press conference to announce that they were the new morning team at failing Hartford CHR station WTIC-FM.

Other local stations had smelled a stunt when both WTIC AM and FM started running news stories about the generous pair; stories that were picked up by no other local media. WTIC-AM, a 50,000-watt full-service/talk station whose program director also runs the news department of both the AM and FM, claimed ignorance of the fact that it was an in-house stunt.

Editorial: This "man in white" stunt has been used in other markets before. To buy a station's news department into it, and claim that they didn't know it was self-promotion is specious at best, and fraudulent at worst.

There was a time when the FCC would step in and at the very least slap the wrist of stations engaging in such tricks. I am not an advocate of government intervention, but until spectrum space is unlimited and as long as a broadcast license is granted as a public trust, there should be some mechanism of accountabiity for such actions.

This is the same AM/FM combo that drew fire from the Hartford *Courant*, the state's largest newspaper, after its news director, manager, and personalities accepted a free trip to Las Vegas from a developer trying to pass a casino gambling bill in the Connecticut legislature. Shortly after the free trip, the station took a strong editorial stance in favor of casino gambling.

I'd like to beg discussion on this. Has the word "ethics" fallen victim to "profit"? There must be other stories.

A.J. Janschewitz
Commissioner's Executive Assistant/Communications Director
State of Connecticut Department of Revenue Services
(Former broadcaster; still part-time with WRCH, Hartford, & WELI, New Haven)

# 827. DJs at San Franscisco FM station ticketed by police for stunt

> Heard this on the news last night (caution, memory a bit fuzzy). Some
> DJs at KSFO? FM 105 were doing some stunt on a major bridge in the Bay
area.
> The CHP (state police highway patrol) ticketed them for blocking traffic
> on the bridge. The newscast said that they could get a year in jail and
> fines. Looks like a rather poorly planned and researched promotion.

It wasn't KSFO, it was KSOL, and they are in deep deep doo doo.

Stunt was:

During major drive time, the Bay Bridge (as I recall) was blocked by
several trucks, while a KSOL DJ got a hair cut.

The stunt was actually planned quite well. I agree, tho, that it probably
wasn't researched. I never heard if those responsible lost their jobs,
but they should have.

# 829. Radio Bamakan - Mali

Newsgroup: rec.radio.broadcasting
Date: 1993-06-14 04:49:35 UTC
From: resystom@web.apc.org
Message-ID: <1993Jun14.044935.73@gagme.chi.il.us>
Source record: 43067

```
/* ---------- "Radio Bamakan - Mali" ---------- */
```

Radio Bamakan carves out a niche in Mali's new democracy
==========

Walk through the streets of Mali's capitol, Bamako, and you're sure to hear Radio Bamakan wafting out of stores, homes and vehicles. Mali's first community radio station is also the most popular radio station in Bamako.

Its popularity is due to the fact that Radio Bamakan broadcasts most of its programming in national languages, and to the quality of its shows. According to Program Director Mohamadou Cisse, "We put a lot of importance on professional work. By professionalism I mean to take into account time constraints, the social context in which we are working, and an understanding of the listeners." Radio Bamakan went on-air officially in September of 1991. The equipment to get the station running was provided by an Italian NGO, Tierra Nova, but Radio Bamakan found itself in the red before it could even get an operational budget together. It experienced some very difficult financial times, going into debt to install its equipment and conduct technical tests.

Radio Bamakan is no longer looking through its pockets for spare change; it is now financially secure, and the station is content with its modest budget and expenditures. A recent grant from Oxfam America, for example, is being carefully spent on a second studio; the rest of the money will be put into a station fund and kept on reserve for hard times.

It is this type of pragmatism and self-assurance that has made Radio Bamakan so successful. The station is well-aware of the role it plays in defending Mali's new-found democracy and freedom of the press, initiated just over two years ago, on March 26, 1991. That date marked the ousting of the military dictatorship which ruled the country for 23 years.

According to Cisse, Mali's democracy is being consolidated and is still very fragile. As such, "The role of Radio Bamakan is to struggle positively in favor of the democratic process; to defend democracy and serve the population. There are a lot of aspects of democracy that the people don't know about, and we are obliged to raise awareness, to explain that democracy is not anarchy; that democracy involves rights and obligations. We have the right to demand, but we also have obligations to the state.

"On a political level, we have the right to receive whoever we want in our studios. We have the right to criticize what we want. We can say that freedom of the press exists in Mali now," says Cisse.

There are six independent radio stations - three community and three commercial - broadcasting in Bamako. In its early days, Radio Bamakan had to fight for the legalization of community radio, however, Cisse is confident that the new government will not act to close down the independent stations, because of the level of popular support.

Nor does he feel that Radio Bamakan is threatened by the establishment of commercial radio stations, as they do not broadcast in Mali's national languages.

Freedom of the press has also brought foreign-owned radio channels to Mali; stations such as the French owned Radio France-Inter.

Cisse explains, "from a strictly professional point of view, competition with Radio France-Inter doesn't worry me, because I know they can't take our listeners away. The oral tradition is very strong in Africa and a lot of people don't speak French. We at Radio Bamakan speak in a language they understand. Where I am against these stations, is that they represent cultural colonialism. The French are experimenting with a new form of intervention in Africa, through the airwaves of Radio France-Inter."

In the meantime, Radio Bamakan remains dedicated to fulfilling its role of presenting a wide range of issues to Bamako's diverse population. Cisse states, "Before there was only the state radio, but now other visions are needed. There's no longer a monopolization of information. State radio can speak in the name of the government, while free radio can speak in the name of the population, of independent people."

>convince the advertiser on Mainstreet of that!

Wow! Talk about hitting the nail right on the head! Bob, that's the first time I've ever heard this said by anybody but myself. It plagues me twice as bad as the average listener, though, since I'm both: a listener, and a producer (music and advertising). I just listen in on this group to have a little better idea of what's going on inside the radio (hi guys). For the last 10 years, I've been beaned by advertisers asking: "Why should the music and/or copy be different for top-40, classic rock, classical, and talk stations?" While I preach that an ad should not only "get the attention of the listener", it needs to do so in a way that is very appealing to the particular type of listener. Any advertisers listening out there? Keep on preaching the word, Bob, you're absolutely right.

Greetings, Steve Hitch.

[Moderator's Note: I believe that nowhere in broadcasting is it more important to have commercial content compatible with programming than classical muisic. In Chucago we have two commercial classical outlets. WFMT and WNIB. WFMT has always strove to keep commercial content low key while WNIB will play the same pop-rock commercials one might find on any AC outlet. Recently, WFMT has gone to an all-announcer-read copy policy. It is a bit jarring to get done with Mozart and be blasted by some slick, produced jingle for health insurance or a new car!!! Bill]

## 831. Commercial content vs. Program content (was: "Radio Free Moosehead")

>
>And therein lies one of the problems . Program directors and the folks who
>run radio stations forget that commercials are part of the programming too

Here at KPIG, we go to a lot of trouble to avoid bland, boring spots. Unlike most medium-market stations, where most of the copy is written by the sales guys &/or the client, we have a full-time staffer (me) who spends most of his time coming up with strange, funny (?), bizarre, wierd (!) copy. Is it worth the effort? Absolutely! The listeners are entertained, yes, but they also *pay attention*, which translates into results for the clients. Who are, by the way, not as unwilling to break with formula as many sales reps might have you believe. They just need to be sold on the value of entertaining spots.

We also mix in occasional parody spots throughout the day (*not* just in the AM) that help keep the listeners on their toes. Works for us *very* well.

## 832. Arbitron

Newsgroup: rec.radio.broadcasting
Date: 1993-06-17 07:22:09 UTC
From: Andrew Reynhout <reynhout@cs.uri.EDU>
Message-ID: <1993Jun17.072209.17687@gagme.chi.il.us>
Source record: 43071

Quick question- What kind of restrictions are put on Arbitron data?
Obviously it's for sale, at a high price, but do you have to agree to
any kind of non-disclosure? For a certain amount of time, perhaps?

A local columnist periodically uses numbers from the current Abritron
and Nielsen books in his column, but never the ones I'm looking for.

The real reason I ask is that I'm interested in getting some numbers
for a few stations in the area. I know people who pay Arbitron to get
the info. What kind of position would I be putting them in if I were to
ask them to give the data to me?

Any info would be appreciated,
(including some numbers for the Providence-New Bedford market! :-)

* Major overhaul at a 2-year old Celtics-owned financially troubled
WEEI 590AM(SportsRadio 590). A brand new non-sports talk format will
be replacing sports oriented morning and mid-day shows starting on
Monday,July 12th.

Big news is the arrival(via Unistar's syndication deal) of NYC's
FAN 66 (WFAN 660AM) morning voice Don Imus. He'll replace the current
morning team of Craig Mustard and Tom Doyle from 6 to
10am. Recently fired from WRKO-680AM,Boston Herald columnist Howie
Carr will replace Dale Arnold between 10am and 1pm.(Arnold is leaving
to become the radio voice of the NHL's New Jersey Devils on NY's WABC 770)
Craig Mustard will move from mornings to take Glen Ordway's slot from 1 to
3pm.
Glen Ordway will now only do Celtics play by play call. Eddie Andelman's
3-7pm and Jimmy Myers' 7-11pm shows(when not interrupted by Celtics games)
are safe for now.

Also,WEEI will no longer have Bruins games starting in October.
The Bruins will either be heard on WHDH 850AM and or do a time-buy deal
on Greater Media's WMEX 1150AM.

This will be WEEI's second major re-shuffle since it became an all
sports outlet when it dropped the all-news sound on September 2nd,1991.

WEEI's original line-up WEEI's current line-up WEEI's new line-up
in September 1991 as of July 12

6am-10am Andy Moes with Craig Mustard and Don Imus
Suzanne Lee and Tom Doyle
Rob Buttery

10-1pm Dale Arnold Dale Arnold Howie Carr

1-3pm Glen Ordway Glen Ordway Craig Mustard
and Janet Prensky (Dave Shea replaced
(they were on 1-4pm) Janet Prensky but then
was let go himself earlier
this year)

3-7pm Eddie Andelman Eddie Andelman Eddie Andelman
(was on 4-7 before his
ratings collapsed)

7-11pm Craig Mustard Jimmy Myers Jimmy Myers
(or Celtics/Bruins game) (or Celtics/Bruins game) (or Celtics game)

11pm-6am(various syndicated shows such as "Sports By-Line with Ron Barr")

* The arrival of Infinity's #2 talent,Imus(Howard Stern is unquestionably # 1
on their list) into Boston doesn't make any sense. Granted, WEEI
is sinking fast and if this new line-up doesn't produce better results,
it's almost certain the station will fold. So,they had to make a move.
However, to bring in a guy who ranks 9th overall(thanks largely to the
enormous population size of the tri-state area) in the morning and is
really not that interesting of a talk show personality(he was bearable
between songs on W...NnnnnnnBC!) is an enormous gamble when you're
going after an older male(25-54) group who want to have a more local
feel to the morning show...

* In other news : In a few weeks, a big change will most certainly
take place at a major Boston rock FM station(has a letter 'W' in its calls
:-).
It'll be a radical move in some way but many people will not really notice
the difference if they flip the dial to the left...:-)

* All three stations that have changed formats and call letters in the
last 5 months are heavily into their summer promotional campaign :

- The new urban station WZOU(soon to be called WJMZ) 94.5-FM is blitzing
many local TV media outlets with "Jammin' 94.5" spots. Ardman's station
wants to take big slice out of 18-34 group which was solidly held in
control by Pyramid's CHR leader WXKS-107.9(KISS 108). Judging by
many blaring radios on a local beach this past weekend, 94.5 is kicking
some major butt as far as KISS is concerned. This is shaping up one
heck of a radio battle.

- The first country station in many years, Fairbanks' WCLB(formerly WVBF)
105.7FM
hasn't stopped its media bombardment since it went on the air in February.
Many billboards,TV ads,promotional mailers,newspaper and magazine ads.

- Greater Media's new kid on the block and officially the second country
station in Boston, WBCS-96.9 (the call letters are subject to change
if US District Court in Boston soon decides that they sound very
similiar to WBCN's, Infinity's 25-year old AOR poewerhouse.) is playing
20,000 songs commercial-free from beginning of May thru July 4th.
They're concentrating mostly on local TV outlets.

* If you happen to be in Boston for the annual HarborFest during
July 4th Weekend, bring a portable radio with you, WBMX-98.5FM(Hot
AC) will synchronize songs from its playlist(uptempo AC/Motown) with
fireworks over the Boston Harbor on Friday night,July 2nd.

* Mutual Radio's syndicated stars are not getting any respect from the
24-hour talk-station WRKO-680AM or its sister station WHDH 850AM(news/info/
talk). First,Larry King was not picked up when he went to daytime in
February. Now, WRKO decided to drop live segment of Tom Bohonan's Show
(11pm-2am) and in its place to replay the full four hours of Tom
Leykis(10am-2pm from 11pm to 3am. Bohonan's first 2 hours will air on tape
between 3 and 5am.
There's some talk that Leykis will eventually go into national

syndication...Local press hasn't been too kind to Tom. He's been labeled an AM rock'n'roll version of Howard Stern. The spirng Abitron numbers come out this week. We'll see how well or not so well Tom,Howard,and many other voices in Boston did...

-Mark

## 835. Buck$, that's why. Was Re: "Radio Free Moosehead" and "Why Ask Why?"

<deletia>
If commercial stations are playing this, they're really brave.
It hits VERY close to the bone. It'd be pretty sad if listeners
to these stations hear this commercial and don't appreciate the
irony. I guess any station playing it fancies itself an exception,
huh?

Nope. The station I work for plays it, and we've got to be the most trite
rock station in the entire US of A. It ain't that we fancy ourselves
an exception, nosiree. It's that somebody, somewhere, GIVES US MONEY
to air the thing.

Frankly, I think your average radio listener *knows* all the stuff
radio stations do has been done before. So airing a spot like that doesn't
really hurt us.

A blow to establishing democracy in South Africa
==========

The transmitter of Bush Radio, a community radio station in Cape Town, was confiscated by government officials on Friday, April 30, 1993, one day before the station was to go on-air as part of a national campaign to free the airwaves and thus end the monopoly of the state-owned South African Broadcasting Corporation.

Bush Radio went on-air for the first time the previous week. Since that inaugural broadcast, the station was flooded with calls from listeners in the community, and messages of support from individuals and organizations locally and internationally. South Africa's community broadcasters decided to launch their May 1st campaign by going on-air illegally, following two years of frustrated attempts to establish community radio within the country. The "Free the Airwaves" campaign's demands are: the recognition of community radio in South Africa's broadcast legislation; the granting of licenses to community stations that have applied; and the establishment of an independent broadcasting authority.

In a statement issued after the seizure of their equipment, Bush Radio declared: "The government speaks democracy - but while they do they shut down a community radio station whose sole purpose is to let people speak for themselves.

"Our volunteer community networkers have now been robbed of their voice. This comes as a blow not just to Bush Radio, but to all other potential community broadcasters and to anyone who believes in a free-flow of information."

In May AMARC's solidarity network organized an international campaign in support of Bush Radio.

# 837. Radio Legislation in Chile

Newsgroup: rec.radio.broadcasting
Date: 1993-06-17 07:37:07 UTC
From: resystom@web.apc.org
Message-ID: <1993Jun17.073707.17981@gagme.chi.il.us>
Source record: 43076

Degrees of freedom of expression
==========

The pros and cons of Chile's low-power radio legislation
The government of Chile will soon approve new legislation which will authorize the legal existence of very low-power community radio stations.

Over two-thousand such stations, broadcasting on FM with one watt or less, have come into existence since the end of the dictatorship in 1989. They have been demanding that the government grant them legal status ever since.

Almost two years have passed since the country's community radio stations agreed to suspend their broadcasts while a law regulating the sector could be drafted. In November 1991 the House of Deputies approved a proposal for permanent legislation governing the sector. The proposal was highly favorable to the demands and needs of Chile's community broadcasters.

A year later, the Senate approved a second proposal which was totally different from the one approved by the House of Deputies. With the exception of some minor changes, the Senate's proposal will likely become law in the near future.

Critical observations
==========

While it will allow for the legal existence of community radio, the Senate proposal contains several short-comings. Community radio will be legalized almost by default. The main purpose of the proposed law is to regulate very low-power stations; contrary to the community radio movement's demands, the term "community radio," is never mentionned in the text, nor has a separate broadcasting category for community radio been created.

The proposal's main points and major problems as concern community radio are as follows:

1. The stations recognized by the proposal are defined as low-power entities of one-watt or less broadcasting on the FM band. In exceptional cases, in regions with disperse populations, up to 20 watts may be allowed.

* While this definition is a welcome addition to Chile's audio-visual laws, it is very limited. Because the operational characteristics of these stations (management structures,

technical requirements), as opposed to social objectives are stipulated, the proposal essentially makes commercial and low-power community stations equal in the eyes of the law. It would have been preferable to specifically recognize existence and social role of community radio. This point does have some advantages, however: an attempt was made to avoid discrimination as concerns access, ownership, management and the operation of low-power stations; and it allows community stations flexibility in broadcasting advertising to help generate revenue.

2. Licenses will be granted for three years, renewable for the same period. Requests for licenses must be accompanied by detailed technical, financial and operational plans. Licenses will be granted to projects which offer the best technical conditions; when two suitable applications are submitted for the same frequency, the choice will be made by lottery.

* This point poses several problems to community broadcasters: first, many potential applicants lack the finacial resources necessary to conduct the detailed technical study required by the licensing body. Thus many groups will not be considered at the application stage.

Choosing between two equal applications by lottery may not be the best approach to awarding licenses; these decisions should be made according to the stations' social characteristics, and their ability to fulfill the needs of the communities in which they wish to operate.

3. Stations can suspend broadcasting for more than three days only with the permission of the Sub-Secretary of Telecommunications.

* It is unfair to stipulate that stations must broadcast every day. Many stations are only able to broadcast on the week-ends, due to the socio-economic conditions of their staff and community. This point could force stations serving marinalized populations out of existence.

Conclusions

The proposal has both positive and negative aspects. It will at least allow community stations to broadcast legally. For now, we cannot expect a better law, and we cannot wait any longer to begin broadcasting again. The time will come to introduce changes to the proposal. Despite its drawbacks, Chile's community stations are getting ready to apply for licenses under the new Law.

[Coming into this discussion late because our news feed was down for
2 weeks]

I have a cassette series by Dan O'Day called "How to Write and Produce
Radio Commercials That Sell" which goes into the various points raised
by the foregoing posters. It has a good many examples of good and great
commercials, PSAs and promos (many by Dick Orkin, the god of commercials),
and - gotta take the bitter with the sweet - many MANY counter-examples too.
Some are hilarious, actually.

A good commercial or promo can hold your audience AND sell the product; it
just takes the effort to get all the parts right and sufficiently original.
Stuff like "Courteous and efficient service for all your Veeblefetzer needs
since 1910" won't cut it...

ka6etb@GRAFex.Cupertino.CA.US (KA6ETB Steve Harding) writes:
>
>wa2ise@netcom.com (Robert Casey) writes:
>
>> Heard this on the news last night (caution, memory a bit fuzzy). Some
>> DJs at KSFO? FM 105 were doing some stunt on a major bridge in the Bay
>area.
>
>It wasn't KSFO, it was KSOL, and they are in deep deep doo doo.
>Stunt was:
>
>During major drive time, the Bay Bridge (as I recall) was blocked by
>several trucks, while a KSOL DJ got a hair cut.
>
Now, the real story (from the Associated Press, in papers throughout North America Sunday 6/13: The two used ONE van, but parked it across more than one lane of traffic. They were on the bridge for about 10 mins., but the ensuing traffic took more than an hour to clear. They were, of course, parodying Bill Clinton's LAX coif.

>The stunt was actually planned quite well. I agree, tho, that it probably
>wasn't researched. I never heard if those responsible lost their jobs,
>but they should have.
>
Unfortunately, they were let go with a $500 fine and 100 hours comm. service (they is actually a misnomer; only one of the jocks was charged). The real problem is that commercial radio is going to continue to pull this kind of stunt until something is done about it. It reminds me of the Colorado DJs who sent a fake wedding announcement to the Rocky Mountain News (the News let it slip), and challenged any other reader to do the same. The News filed charges against the radio station, but again, the courts slapped a few wrists and let them off (despite the fact that US law prohibits knowingly filing a false news report OF ANY KIND with any news organization).

One might have thought that Howard Stern's $755,000 fine being upheld by the Supreme Court might have wised a few people up, but even his owners seem to be raking in more than enough to continue to pay for his trash. And my friends wonder why I wanted out of radio for the rest of time ...

Lots of radio stations here use US companies like JAM in Dallas to make their jingles. So, lots of UK jingles have american accents...

Promo's etc are often done in an american accent too, probably because it stands out from the local accent.

How does one (who is not in the radio biz) get an update on how stations are ranking in their town? I'd like to see the ratings for Washington and Baltimore stations each month. How would I go about doing this? If someone could post them/e-mail them to me, I'd appreciate it. Although I'm not a radio guy, I've always been fascinated with why stations do what they do, such as change formats, etc. I try to keep current on things like this.Thanks,

Chris

From: "James F. Nelson" <U17474@uicvm.uic.edu>
Message-ID: <1993Jun20.044428.1394@gagme.chi.il.us>
Source record: 43082

In article <1993Jun17.074741.18273@gagme.chi.il.us>,
fishbein@shark.gsfc.nasa.gov (Jeff Fishbein) says:
stuff about traffic jam deleted for brevity
>
>stunt until something is done about it. It reminds me of the Colorado DJs
>who sent a fake wedding announcement to the Rocky Mountain News (the News
>let it slip), and challenged any other reader to do the same. The News filed
>charges against the radio station, but again, the courts slapped a few wrists
>and let them off (despite the fact that US law prohibits knowingly filing a
>false news report OF ANY KIND with any news organization).
>
I don't think I would put a fake wedding announcement on quite the same level
as causing a traffic jam on a major bridge. There's little potential for
real harm in a fake wedding announcement, but if a deliberately staged
traffic jam causes emergency vehicles to get stuck, somebody could die,
not to mention the major inconvenience caused to thousands of commuters.

Not a flame, just my $0.02.

Have them try WKB in Buffalo 1520AM I think.

## 845. Re: Imus/Boston and other stuff

Newsgroup: rec.radio.broadcasting
Date: 1993-06-20 04:45:05 UTC
From: testnet!pr@pegasus.att.com
Message-ID: <1993Jun20.044505.1458@gagme.chi.il.us>
Source record: 43083

Imus in Boston: I think Imus is a shell of his old great self, hanging on to past successes. He's able to do this because I think most of his listeners are either people who've been listening for 20 years, or people whose dial is glued to 660. The Imus in the Morning program cycles thru news, traffic, sports, and spots about three times an hour and most of the "humor" is Imus teasing and bickering with his co-horts (the newsman, the traffic woman, the sportsnews man, and his friend and now station colleague Mike Lupica). Like with the Howard Stern show, new listeners won't "get it" right away because they don't know who's who to understand whom Imus is teasing about what. Occasionally a record is played and Imus does still do some bits (repeated later in the same day's show) like Imus in Washington, Richard Nixon and Scott Muni impersonators. I was glad to get the day when then-candidate Bill Clinton called in (Imus big moment of 1992) but generally the show is lame enough that I stopped trying to put together all-Imus best of tapes - it takes too long and the bickering is annoying more than it is funny.

Re: a station (in this case WBMX) "synchronizing" its music to the fireworks, I feel this is all hype. WNBC, WPLJ, and WNSR in different years have used this ploy in New York to get people to listen during their sponsorship of the fireworks, and all it ever is, is the station playing patriotic instrumental music (i.e. The Stars and Stripes Forever) for half an hour. It's not synchronized, the music doesn't increase in intensity as more fireworks go off, the music doesn't stop when there's nothing in the sky. With no offense to the poster, I am dubious about how good it will be in Boston on WBMX. "Appropriate traditional American music" might better describe what the station airs during the fireworks.

Unistar/Infinity: I'm kind of surprised Infinity isn't using WZRC-1480 NYC to air the other syndicated players not already on the air in NYC, ie G Gordon Liddy and Don&Mike (two guys who talk to each other for four hours? the style I heard in a 90 minute aircheck reminded me of listening to Steve and Garry on WLUP when I was last in Chicago). For now they are running Unistar's country before their reported leasing to Korean broadcasters.

# 846. Re: New AM to power up in Terre Haute

Newsgroup: rec.radio.broadcasting
Date: 1993-06-20 04:49:06 UTC
From: SEDV1.acd4.acd.com!jwg@acd4.acd.com
Message-ID: <1993Jun20.044906.1573@gagme.chi.il.us>
Source record: 43084

Scuse me while I quote from my own article.
In article <C8DJuw.H4M@news.cso.uiuc.edu> jwg@acd4.acd.com (jwg) writes:
Contemporary Media, Inc., a Missouri-based company, is making plans to
bring a new AM radio station on-line in Terre Haute, Indiana.
<deletia>
The new station will reclaim 1230 KHz. Calls have yet to be announced.

They snuck it on the air on us late last week. The calls are WBFX. It
currently simulcasts WZZQ-FM. This will continue indefinitely, because
no equipment has yet been purchased to run the station on its own. So,
now we quietly give a "WZZQ WBFX Terre Haute" ID during our :50 break, and
still run our carted crunch-whoosh-zoom Joe Kelly ID at :00.

[Moderator's Note: Nice to hear more from the industry in favor of live
and local radio. Sad that the realities of small station ownership is that
finaces often dictate the use of these satellite delivered formats. As I
have said before, my biggest two gripes are that satellite feeds eliminate
many entry and near-entry level jobs for up-and-coming air talent.

Darn straight. I got my first professional radio gig at WZZQ's sister, a
full-service AM that *used* to have live jox on the weekends. Now, it's only
live for morning and afternoon drive.

<deletia>
But sadly, I feel that most people want to hear "their" music and the station
that provides the most of that product with the least interuptions will gain
listeners. Like a post in the past said (paraphrased) "... radio is to many
people like the electric company. It matters little who provides the service,
as long as it is their when I want it... " Bill]

Hmm. That was me who said that electric company thing; nice to be
paraphrased.
Although I must admit, I read the line in one of the rock radio trades.

I think having a classic country in this market, despite being satellite,
will generate listenership. This market is heavily weighted toward the
50+ crowd, and its longtime and lifelong residents really lean toward
older country music - just go into the neighborhood bars and look at the
titles on the jukeboxes. To some extent, just plugging into a classic
country satellite channel *can't not* succeed.

The success *will* be hampered, though, when that 50+ crowd wants to get
the services from their radio that they grew up with, that they're used
to, and -- most importantly -- can still get from the "hot country" WTHI-FM:
news, community events, weather, local personality, local content. It
matters more to that group than anyone who's younger.

While working at WBOW-AM, the local full-service that plays 40s and 50s standards, I occasionally was out amongst the listeners doing "official station things". And, by George, I was *surprised* by how well these people, all in that 50+ demo, knew what we were up to. They knew our clock almost as well as the jocks did! "Oop, about twenty past, they're about to give that WBOW Satellite Weather Forecast!" They knew our voices, remembered our names, remembered stuff we'd said on the air. We found this out when we'd do remotes - they'd hear us and come up and talk and tell us just how much they liked what we did. Heck, I only worked one airshift per week there, a Sunday midday shift, and people got comfortable with me. I even had a "fan", a dear old woman named Blanche who'd call me every week to make sure all was well with me. My last shift there, just before the station automated nights and weekends, I announced during my last break that I was leaving for the FM, and the phones just lit up to wish me well. For *me*, a part-time, one-shift-a-week kid, a minor voice out in radioland.

So now I've "arrived", I work for the rock station. Know what? The listeners have no idea who I am, even though I've been there every Sunday afternoon for more than a year. Can't say I'm particularly surprised. When I'm out on promotions wearing my staff shirt with my name emblazoned across my left pec, the only reason anyone notices me is because the station logo is on my right pec. "Oh, you work there? Who are you?" I bet that when I leave the FM someday, I'll say "bye" into my last break, and the phone will remain silent.

So, eventually Terre Haute will have its satellite classic country with carted local news and maybe even carted PSAs. But without the real live person in the booth, I think we'll see a strong surge of listership among the 50+ crowd *at first*, and then, when they want that full package of music, news, personality, local content, etc., they'll switch back to the live-jocked hot country. Or mabye switch back and forth. Yeah, there'll be success. It'll make money and be cost-effective. But it sure as heck don't make it good. It sure as heck doesn't help build up this community, like radio used to do.

## 847. bbs-andrew@jwt.oau.org (Andrew Reninger)

Newsgroup: rec.radio.broadcasting
Date: 1993-06-20 04:49:14 UTC
From: "Orlando Happenings"
Message-ID: <1993Jun20.044914.1589@gagme.chi.il.us>
Source record: 43085

News from Orlando:

Arbitron has opted NOT to include Lake County, FL in the Orlando Metro. Of 9 subscribers in Orlando, only four voted for the inclusion of Lake County to the Metro. If 5 (more than half) decide they want Lake County as part of the Metro before October 1, Arbitron may include Lake County before the Spring 1994 survey.

Last month, Press Broadcasting (owns WKCF-TV 18) assumed control of WWNZ-FM from Paxson Broadcasting, changed the call letters to WTKS-FM, and fired midday "Cryin', Lovin', and Leavin'" host Ed Hartley. Hartley's show is now on
WGTO-AM. Replacing Hartley is the G Gordon Liddy program. Meantime, morning co-host Wanda Rowland moves to nights, and weekender Peter Roccio begins a 10p-2a talk show, replacing Alan Combs (tape delay). On the weekend, WTKS is all-music. Basically a mid-80's-based hot-AC. No music more recent than 1990.

WWNZ-AM, which had been simulcasting WWNZ-FM, becomes all-news, except with a sports show in the evening. After 2 am the station simulcasts FM sister
station WMGF "Magic 107.7."

Paxson's other AM, WPRD, was to have been sold to Rama Broadcasting. A disagreement between the two parties has taken the station off the air pending
a judge's ruling on whether Paxson is obligated to sell the station to Rama, which had been operating the station under an LMA. Paxson contends that the LMA has expired, and talk is that he wants to make WPRD all-sports.

Elsewhere: 102 Jamz (WJHM) announced that 2-Live Crew rapper Luke Campbell would be at the Dekko's club in downtown Orlando. Hundreds of people attempted to enter the already-packed club, resulting in a small riot.

NewCity stations K92FM, B94.5 and 580-WDBO sponsor a racing autograph party at Church Street Station June 30th. Meantime, B94.5 afternoon guy Ellis B Feaster takes a lap around Daytona International Speedway in a pace car Saturday (19th). Ellis also has a bet with a listener over the NBA championships: if Phoenix loses, a listener gets to shave Ellis' head.

Mix 105.1 hosts the big Fourth Of July fireworks spectacular at Lake Eola Park.

The Daytona Beach Hotel/Motel Association has had a preliminary vote to stop marketing Daytona Beach as a Spring Break destination, and instead to target families (much like Ft Lauderdale did several years ago). Although no final vote has been taken, the preliminary vote is indicative of what the whole

organization will probably do. This could be bad news for WNFI "The New 99.9," which has no numbers (averages a 3 share, well behind Daytona leader 98-Frog's 12 share and most of the Orlando stations). WNFI has come to rely on the money it makes during Spring Break... targetting college kids with spots for bars and beverages. Ending Spring Break could be a serious blow for this station.

Andy in Orlando

This doesn't surprise me, but that since that reaction is entirely based on my personal taste I won't further subject you to my feelings about the Greaseman. ;-)

Anyway, I had been planning on sending in a proposal for this, but hadn't gotten around to it yet. Since the original proposal seemed a little sparse, I'll tack mine on here. I mention in it that there have been discussion groups about the show for a while now on the commercial nets... and that was before they went national. I think they'll be able to support a group, but, then, that's part of what this discussion period is all about...

> alt.fan.don-n-mike

Is there a good reason to use an "n" instead of an "and"?

------------8<----------------8<----------------8<--------------

I'm proposing the creation of a .fan. newsgroup for news and discussion related to The Don and Mike Show, a radio program which is being syndicated by the "UniStar Network" (the same questionable company that syndicates G. Gordon Liddy and [according to the fine print at the end of some of those late-night 900 number ads] maintains a stable of housewives willing to pretend to be wild, secret-sharing women for money. Coincidentally, D&M's producer, Diana, held such a job a few years ago. Weird).

Don and Mike have been fixtures of the Washington, DC radio scene for some time now. They originally started as a team in one of those execrable "Morning Zoo" formats, but eventually were able to claw and chew their way out of the restrictions placed on them by formulaic general managers to produce the entertaining, light-hearted gab-fest format their listeners

now enjoy. Their home base is 106.7FM WJFK in DC and
1300AM WJFK in Baltimore, MD. This is an Infinity Broadcasting
station that also serves as the starting point for G. Gordon
Liddy's show. It broadcasts Howard Stern in the morning and
the Greaseman at night.

There have been discussion groups about the show on the various
commercial services (CompuServe, Prodigy, etc.) for some time,
apparently, and I've been waiting breathlessly for a similar
group on a real network. I've held off on even vaguely hinting
at the creation of such for years, tho (showing impressive
self-control, I must add), until they went into syndication.
This was their first week, starting in Buffalo, NY (I forget the
call letters, but I think it's the same one I used to listen to
at night on 1520 or 1530 on AM... someyhing like WKBK, maybe ???).
They'll be in Tampa, FL next week and in Chicago, IL, rsn.
Beyond that, who knows? Buffalo is carrying the show live
(3PM to 6PM), tho some markets are planning on playing it
the next morning, etc.

Latin America Communications

I am the Editor of Chasqui, a Journal on Latin American media and communications trends. We have been publishing without interruptin since 1981 and our topics include developments in the cultural and communications industries in the region, new trends in alternative or community media, analysis and proposals of media policies in the region, the role of media in political developments, among many others.

In fact Chasqui is a journal on Latin American affairs for students and researchers working on regional issues and international relations.

I am requesting articles for our next issue to be published in October 1993. Our central topic will be Public and Educational Radio and Television Networks in the Industrialized countries particularly, in the US, Canada, Australia, UK, Denmark, Sweden and Germany.

Background. Latin American countries are going through a period of radical transformation in their media legislation, property structures, and relations with regional and national governments. Alternative, comunity or popular media is searching for ways to survive in an unfriendly economic and political environment. In all countries scholrs and professionals are looking for models of systems in which the national, state, and local government may join with private sector sponsors, listeners, and NGO's to create networks of educational, cultural and community radio and tv stations. The process is seen as part of ongoing democratization of the market, society and the political system.

The industrialized countries of north America, Europe and Asia have built such systems of public service media over the past decades with different initial objectives and different achievements. We want to devote most of our next two issues to a critical review of these systems. The articles would be aimed at readers generally unfamiliar with media in the countries studied.

The articles must be submitted to Chasqui by August 15, 1993 by fax, e-mail, or ordinary or express mail. The articles should be about 2400 words. Longer essays will be considered but may be edited down if needed. Articles may be submitted in English, Spanish, French, German, Portuguese or Italian. They will be translated for publication in Spanish.

Also we are interested to learn of availability of essays or papers in other topics related to international telecommunications, academic/ research/other conferences, hotlines, new tecnologies, libraries virtual and otherwise, role of media in political developments in Latin America, media and development, media and education, etcetera.

If you intend to present an article please indicate so ahead of time: length, one paragraph description, estimated date of transmittal/arrival, and a few lines on your professional background.

Subscriptions are available for US$ 40, 72 and 96 for 1, 2, or 3 years. We are also offering complete collections (46 issues) at US$10.00 per issue for reference and specialized libraries. If you need additional information Ordonez by E-mail gino@chasqui.ec

You may communicate with us as follows:

Mail address:

Gino Lofredo, Editor Chasqui/CIESPAL, Casilla Postal 17-01-584,
Quito, Ecuador

Telephone: (5932) 506 149 or (5932) 505 920

FAX: (5932) 502 487 or (5932) 500 340

E-Mail: chasgino@ecuanex.ec or at gino@chasqui.ec

Thank you for your interest and look forward to your responses.

Gino Lofredo

>respnses. Bill]

How Radio Stations are Rated

Like television, most radio stations are rated based on sample surveys of the SMSA and DMA (Bill, help me with the acronyms) served by the station -- this is known as a station's "market".

Ratings are compiled by two companies: Arbitron and Birch (these are the radio equivalents of TVs Neilson). Other companies may measure specific attributes in a given market, but these are the national players.

Both companies rely primarily on hand-recorded diary information from a group of randomly selected individuals in a "market". These people are asked to write down what station they listen to ANY TIME and EVERY TIME they hear radio.
^^^^
The problem is, what if they lie? What if they forget? What if they don't know who they're listening to? This is why Birch (and Arbitron may do it now) also calls people and business and solicits add'l info as to listenership. Note they are to write down what they HEAR, not what they listen to (if you are a Neilson family, the networks only want to know what you're watching seriously, not what you flip to during the commercial break). This tends to skew radio ratings to an extent, so to even it out, measurement is based on 15-minute listening periods (Quarter Hours) -- that is, what you had on the radio for at least five minutes, then what you had on beyond 15 minutes. (Like TV, radio ratings generally discount all the radio you hear in stores, bars, etc.)

The measurements of the surbey are compiled to show how much of the potential and actual audience were listening to that station for a given QH. Those that listen in consecutive QHs are said to be "cumed" audience, and that is supposed to be the actual number used for ratings. Like TV, the "rating" is the percentage of the TOTAL NUMBER OF RADIOS in the DMA/SMSA that are tuned to your station; the "share" is the number of ACTIVE radios tuned in.

EX: WXYZ-FM is in a market with 100 radios. 80 people are listening to the radio; 20 of those are tuned in to WXYZ. WXYZ would get a 20 rating, but a 25 share.

These ratings are then broken down by demographics to determine who is reaching whom in the audience. Rock stations tend to be male dominated; Urban is a female oriented format (white females, BTW); CHR (Contemporary Hit Radio, a/k/a Top 40) is teen dominated. Note the types of ads you hear on any given

station; think about who those ads are aimed at -- you won't hear airlines advertising on a top 40 station, nor will you hear Pepsi advertising in the Adult Contemporary (middle of the road) arena.

It is because of these demographic breakouts that virtually EVERY station in any given market can claim to be #1, and have ratings documentation to support the claim.

One final note: The stations themselves lend to skewed ratings by using questionable wording in their self-promotion. How often have you heard a station during book period use "Write it down!" promos; or "If someone asks you what station you listen to, say 'WXYZ-FM!'".

This is a quick digest; and as I'm sure you can tell, it's from the point of view of someone who is suspicious of the entire rating system (think of the hundreds of times you've been in public hearing ads on radio -- this is totally overlooked by ratings. Kind of like all the televised sports in bars -- if Neilson measured taverns, ABC's Monday Night Football rating would likely double or triple, maybe go higher).

For more ratings info, a good place to turn is a radio station (or a good c

For more, you might look into a college radio program that has actual Arbitron and Birch reports for use in classes -- they're old, but they have explanations of how the system works.

>[skip story deleted]
>What's going on? Is there some kind of weird atmospheric thing going on
>today or what?

Weird, No
Atmospheric, Yes

If it was around noon, local time, then it was probably SKIP... although I believe that DUCTING can happen this low in frequency.

(I'm sure this has been mentioned already though... I am a few days behind in this group... so I'll leave out the technicals of the effects)

>The station from Amarillo was actually breaking up the signal from a
>100,000 watt fm local station. Jeeeeees, how much power would you
>have to be using to get from Amarillo, TX to Anderson, SC on an fm
>broadcast at 93.1?

An interesting skip signal I caught once on the tube, was when I was watching KTVU, channel 2 in the SF Bay area. I don't have cable, and since I live in an apartment that does not allow rooftop antennas, I have a 3 element VHF (+11 element UHF) antenna set up in my computer room aimed north north east through the valley towards Sacramento. I guess I was watching channel two off the back lobe of the antenna. It was near the top of the hour (how fortunate) and all at once I started getting interference on the signal... At first I thought that channel 2's STL might have gotten som interferrence with some other station since it appeared to be a football game cutting in. The only football game on locally was on ABC, the closest over the air channel for ABC is channel 7.

Well, I confirmed that it was ABC, and rolled the VCR just to catch whatever it was... Well, they cut to commercials, and none of the commercials matched any of the three local ABC stations... The locations mentioned in the commercials were unknown to me... and then... they ran a station ID... KTWO (or something like that) Cheyenne, Wyoming. (or was it Billings Montana??? It's been a while... gotta pull the tape and look it over again).

The skip signal from about 1000 miles away totally obliterated the local station which was less than 30 miles away. The interesting thing was that this was at night, (about 7 or 8 pm, sort of unusual time for skip) in the winter (best time of the year for skip).

I grabbed my scanner book, and my Ham Repeater guide, and tried to get some other signals from that area... but alas, the effect went away very fast

and I never found any other long distance VHF signals that day.

Every once in a while, I can receive another station from a distant
location.
Nothing like my Wyoming logging, but still, not too bad for an indoor antenna,
Every once in a while I am able to pick up the CBS station out of Red Bluff,
CA on channel 12 about 200 miles from me.

tweek@netcom.com tweek@tweekco.uucp WWIVNet 1@511 DoD #MCMLX
I'd rather get my cable service from the phone company,
than my phone service from the cable company.

>
There has never been a proven correlation between solar
activity and sporadic-E propagation (Es). Es is most likely
caused by terrestrial conditions, like wind shear in the
upper atmosphere. Such wind shears are often coincident with
lines of thunderstorms in the southern and midwestern US. The
level of storm necessary for Es unfortunately often spawns
tornadoes as well.

Like thermal inversions (often mistakenly referred to as
"tropo" or tropospheric ducting), the best indicator of Es
openings is a weather map.

The late Mel Wilson, who lived near Rochester, NY, intensively
studied Es propagation for many years. He built dozens of
VHF receivers tuned to distant Public Service, FM and TV
frequencies, which were connected to chart recorders. With
this equipment he was able to define every Es opening that
reached his location. He would then attempt to correlate the
opening with geophysical phenomena.

Mel passed away in the late 70s, but his writings have been
reprinted in "Beyond Line of Sight, A History of VHF Propagation
from the pages of QST," edited by Emil Pocock. Several other
more recent articles on Es are also included. Other parts of the
book include articles on "tropo," auroral, meteor scatter and
"moonbounce" propagation of VHF signals. Email to me for info on

obtaining a copy of this book.

Sporadic E refers to the nature of the propagation, and the ionospheric region in which it takes place. Signals are refracted from small, clouds of dense ionization. Because the refracting surface is a small cloud at relatively low altitude (60-65 miles), the onset and decline of an opening are quite sudden. For the same reasons, the areas of coverage on either end of the path are rather small. It isn't unusual for your friend a few miles away to be hearing distant FM stations, while you hear only locals! Because the openings don't last long, getting a good ID on a station is a problem, especially in these days of satellite feeds. Some openings make use of more than one cloud, further confusing the listener!

Traditional ionospheric propagation from the E and F regions rarely occurs for frequencies above 50 MHz, even during times of intense solar activity, such as occurred in 1989-90. You can see that a great deal of ionization must occur to propagate signals at 100 MHz. A serious listener/TV DXer listens on lower frequencies for advance notice of possible openings. If you start hearing low-band Public Service stations (30-50 MHz) a few hundred miles away ("short skip"), there is a possibility of longer skip at higher frequencies, _if_the_ clouds_are_there_.

A highly directional antenna is actually a handicap during an Es opening, as the cloud or clouds may not be located over the great circle path between you and the transmitter. The signal may travel over an oblique path instead.

Good listening.

Jim, KR1S

## 853. WITH and WHLP (Baltimore)

Newsgroup: rec.radio.broadcasting
Date: 1993-06-20 04:54:44 UTC
From: bz820@cleveland.Freenet.Edu
Message-ID: <1993Jun20.045444.1869@gagme.chi.il.us>
Source record: 43092

I'll explain the situation as far as I know it, and I'd like to know why the following took place.

A few months back, WITH-AM 1230 was bought, and the Personalities weren't sure what would happen. WITH-AM plays bigband music. It looked as though they'd change format.

Meanwhile, WHLP-AM 1360 has been a job radio station. They offered job announcements over the radio (kind of like the want-adds in a news paper.) This format only lasted a few months. About a month or so ago, I flipped around the AM dial as I often do, and found that WHLP changed format from job radio to big band, taking most of the WITH personalities to WHLP. Some of WHLP'S personalities went to WITH, but the station continued playing big band music.

Now, we have two competing big band stations, each saying they are the best. Do you think that WHLP changed to big band on their own, but that kept WITH from changing to another format for the competition?

Can someone explain what happened with that transaction as far as format, etc?
I didn't expect that to happen.

Thanks,

Chris

# 854. Howard Stern Radio Listing - SHORT FORM

Newsgroup: rec.radio.broadcasting
Date: 1993-06-20 04:59:02 UTC
From: ckunz@src4src.linet.org
Message-ID: <1993Jun20.045902.2002@gagme.chi.il.us>
Source record: 43091

Hi, kids!

Welcome to the Howard Stern Radio Network list - short form!

We've got a new way of doing things now. As per a suggestion from Bill, moderator of rec.radio.broadcasting, there's a new format to the radio listing. It's being split into two forms. Right now you're reading the short form, where you'll find only new markets and possible new markets. The short form will be posted to both r.r.b and alt.fan.howard-stern. The long form (entire station roster) will be posted solely to a.f.h-s. If you don't have access to the alt heirarchy, drop a note to me, ckunz@src4src.linet.org, and I'll send the long form via e-mail.

Here's what we've got for this month:

Last update: June 12, 1993

New stations in the past 30 days:

None

Possbile new markets mentioned in the past 30 days:

[B * Miami - what happened? Things were looking good, and no Howard.
* Minneapolis - another possibility
* Atlanta - see Miami
* Detroit - see Miami
Note: these may be 'carryovers' from last month

Plus we've got a few phone numbers, courtesy of the King of All Media Newsletter, that you may or may not be aware of:

San Jose/San Francisco: 800-24-STERN
New Orleans: 800-46-STERN
Rochester: 800-STERN-95

As usual, please send via e-mail any new markets or changes to old markets. (List of phone numbers is complete!) Catch you next month!

Well at least for once it wasn't two men on a billboard with
the "we need a job" message;

or the ads bought on competing stations advertising "Morning Flakes"
coming soon everywhere.

The person who posted sounded very bitter...perhaps he was one
of the hoaxees?

Maybe the promotion dept didn't tell the news dept. (the same
news dept who let a drunken newsman go on the air the day of
their holiday party a few years ago?)

<deletia>
If commercial stations are playing this, they're really brave.
It hits VERY close to the bone. It'd be pretty sad if listeners
to these stations hear this commercial and don't appreciate the
irony. I guess any station playing it fancies itself an exception,
huh?

Nope. The station I work for plays it, and we've got to be the most trite
rock station in the entire US of A. It ain't that we fancy ourselves
an exception, nosiree. It's that somebody, somewhere, GIVES US MONEY
to air the thing.

Frankly, I think your average radio listener *knows* all the stuff
radio stations do has been done before. So airing a spot like that doesn't
really hurt us.

A blow to establishing democracy in South Africa
==========

The transmitter of Bush Radio, a community radio station in Cape Town, was confiscated by government officials on Friday, April 30, 1993, one day before the station was to go on-air as part of a national campaign to free the airwaves and thus end the monopoly of the state-owned South African Broadcasting Corporation.

Bush Radio went on-air for the first time the previous week. Since that inaugural broadcast, the station was flooded with calls from listeners in the community, and messages of support from individuals and organizations locally and internationally. South Africa's community broadcasters decided to launch their May 1st campaign by going on-air illegally, following two years of frustrated attempts to establish community radio within the country. The "Free the Airwaves" campaign's demands are: the recognition of community radio in South Africa's broadcast legislation; the granting of licenses to community stations that have applied; and the establishment of an independent broadcasting authority.

In a statement issued after the seizure of their equipment, Bush Radio declared: "The government speaks democracy - but while they do they shut down a community radio station whose sole purpose is to let people speak for themselves.

"Our volunteer community networkers have now been robbed of their voice. This comes as a blow not just to Bush Radio, but to all other potential community broadcasters and to anyone who believes in a free-flow of information."

In May AMARC's solidarity network organized an international campaign in support of Bush Radio.

# 858. Radio Legislation in Chile

Newsgroup: rec.radio.broadcasting
Date: 1993-06-20 05:04:17 UTC
From: resystom@web.apc.org
Message-ID: <1993Jun20.050417.2277@gagme.chi.il.us>
Source record: 43094

Degrees of freedom of expression
================================

The pros and cons of Chile's low-power radio legislation
The government of Chile will soon approve new legislation which will authorize the legal existence of very low-power community radio stations.

Over two-thousand such stations, broadcasting on FM with one watt or less, have come into existence since the end of the dictatorship in 1989. They have been demanding that the government grant them legal status ever since.

Almost two years have passed since the country's community radio stations agreed to suspend their broadcasts while a law regulating the sector could be drafted. In November 1991 the House of Deputies approved a proposal for permanent legislation governing the sector. The proposal was highly favorable to the demands and needs of Chile's community broadcasters.

A year later, the Senate approved a second proposal which was totally different from the one approved by the House of Deputies. With the exception of some minor changes, the Senate's proposal will likely become law in the near future.

Critical observations
=====================

While it will allow for the legal existence of community radio, the Senate proposal contains several short-comings. Community radio will be legalized almost by default. The main purpose of the proposed law is to regulate very low-power stations; contrary to the community radio movement's demands, the term "community radio," is never mentionned in the text, nor has a separate broadcasting category for community radio been created.

The proposal's main points and major problems as concern community radio are as follows:

1. The stations recognized by the proposal are defined as low-power entities of one-watt or less broadcasting on the FM band. In exceptional cases, in regions with disperse populations, up to 20 watts may be allowed.

* While this definition is a welcome addition to Chile's audio-visual laws, it is very limited. Because the operational characteristics of these stations (management structures,

technical requirements), as opposed to social objectives are stipulated, the proposal essentially makes commercial and low-power community stations equal in the eyes of the law. It would have been preferable to specifically recognize existence and social role of community radio. This point does have some advantages, however: an attempt was made to avoid discrimination as concerns access, ownership, management and the operation of low-power stations; and it allows community stations flexibility in broadcasting advertising to help generate revenue.

2. Licenses will be granted for three years, renewable for the same period. Requests for licenses must be accompanied by detailed technical, financial and operational plans. Licenses will be granted to projects which offer the best technical conditions; when two suitable applications are submitted for the same frequency, the choice will be made by lottery.

* This point poses several problems to community broadcasters: first, many potential applicants lack the finacial resources necessary to conduct the detailed technical study required by the licensing body. Thus many groups will not be considered at the application stage.

Choosing between two equal applications by lottery may not be the best approach to awarding licenses; these decisions should be made according to the stations' social characteristics, and their ability to fulfill the needs of the communities in which they wish to operate.

3. Stations can suspend broadcasting for more than three days only with the permission of the Sub-Secretary of Telecommunications.

* It is unfair to stipulate that stations must broadcast every day. Many stations are only able to broadcast on the week-ends, due to the socio-economic conditions of their staff and community. This point could force stations serving marinalized populations out of existence.

Conclusions

The proposal has both positive and negative aspects. It will at least allow community stations to broadcast legally. For now, we cannot expect a better law, and we cannot wait any longer to begin broadcasting again. The time will come to introduce changes to the proposal. Despite its drawbacks, Chile's community stations are getting ready to apply for licenses under the new Law.

Source record: 43097

[Coming into this discussion late because our news feed was down for
2 weeks]

I have a cassette series by Dan O'Day called "How to Write and Produce
Radio Commercials That Sell" which goes into the various points raised
by the foregoing posters. It has a good many examples of good and great
commercials, PSAs and promos (many by Dick Orkin, the god of commercials),
and - gotta take the bitter with the sweet - many MANY counter-examples too.
Some are hilarious, actually.

A good commercial or promo can hold your audience AND sell the product; it
just takes the effort to get all the parts right and sufficiently original.
Stuff like "Courteous and efficient service for all your Veeblefetzer needs
since 1910" won't cut it...

>
Now, the real story (from the Associated Press, in papers throughout North America Sunday 6/13: The two used ONE van, but parked it across more than one lane of traffic. They were on the bridge for about 10 mins., but the ensuing traffic took more than an hour to clear. They were, of course, parodying Bill Clinton's LAX coif.

>The stunt was actually planned quite well. I agree, tho, that it probably
>wasn't researched. I never heard if those responsible lost their jobs,
>but they should have.
>
Unfortunately, they were let go with a $500 fine and 100 hours comm. service (they is actually a misnomer; only one of the jocks was charged). The real problem is that commercial radio is going to continue to pull this kind of stunt until something is done about it. It reminds me of the Colorado DJs who sent a fake wedding announcement to the Rocky Mountain News (the News let it slip), and challenged any other reader to do the same. The News filed charges against the radio station, but again, the courts slapped a few wrists and let them off (despite the fact that US law prohibits knowingly filing a false news report OF ANY KIND with any news organization).

One might have thought that Howard Stern's $755,000 fine being upheld by the Supreme Court might have wised a few people up, but even his owners seem to be raking in more than enough to continue to pay for his trash. And my friends wonder why I wanted out of radio for the rest of time ...

Lots of radio stations here use US companies like JAM in Dallas to make their jingles. So, lots of UK jingles have american accents...

Promo's etc are often done in an american accent too, probably because it stands out from the local accent.

From: Ofer Inbar <cos@CHAOS.CS.BRANDEIS.EDU>
Message-ID: <1993Jun21.211149.5874@gagme.chi.il.us>
Source record: 43001

WBRS is celebrating its 25th anniversary as an FM broadcast radio station (we were carrier current from 1956-1968, then went FM). We're trying to plan most of our stuff to coincide with Brandeis University's orientation for the class of '97, which will be at the end of August and beginning of September. We're also looking for articles for our fall program guide, to be published at about that time.
For the past decade, WBRS has been keeping personnel records and archiving staff contracts, and we are still in touch with some station members from the early 80s and even the late 70s. However, since this is a 25th anniversary, we'd really like to find some of the people who were here in 1968, and the years between now and then. It would be great if some of those people could visit the station, write articles for the program guide, guest DJ, etc.
If you or anyone you know can help track down any of these people, or even just give us some names and class years (then Brandeis can find them for us), please email me. My address is cos@cs.brandeis.edu, and you can CC: to WBRS@binah.cc.brandeis.edu.
Thank you!

-- Cos (Ofer Inbar) -- cos@chaos.cs.brandeis.edu

## 864. Introduction to rec.radio.boadcasting (NEW)

Newsgroup: rec.radio.broadcasting
Date: 1993-06-21 23:47:10 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <1993Jun21.234710.7481@gagme.chi.il.us>
Source record: 43002
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Greetings:

Rec.radio.broadcasting (r.r.b) is a Usenet newsgroup which
was founded in April of 1992, in order to provide a forum for
discussion of topics pertaining to 'domestic broadcast radio'.
Already in existance was rec.radio.shortwave, which centers around the
International radio scene, and rec.radio.noncom who's focus is,
obviously, non-commercial radio. Rec.radio.broadcasting was intended
to 'fill the gap' between these groups.

The Internet Radio Journal is a periodic email digest consisting,
mainly, of articles found in the newsgroup. It is intended for people
who either cannot access the newsgroup from their system or for some
reason perfer a digestified format for reading. Subscriptions to IRJ
are free, and available to anyone who wants one, and who is equiped
with some form of email service.

-=*=- DOMESTIC BROADCAST RADIO -=*=-

By domestic, we mean broadcasts which are intended, primarily,for
reception in the same country/nation in which they originate. R.r.b
is an international newsgroup, though, and the term 'domestic' should
not be taken to imply 'USA' or even North American. Readers in other
nations are encouraged to participate.

-=*=- SUBJECTS -=*=-

If it has to do with broadcast radio, and not _specifically_ international
shortwave, it is welcome here. Occasionally an article which IS
primarily about shortwave will be posted if the subject seems broad
enough that the readership of r.r.b might be interested, or be able
to assist the poster in some way.

Generally, if a subject 'seems' like it would be of interest to the
broadcasting community (which includes those involved in creating,
transmitting or listening to broadcast radio) will be published.
These subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters and interests.
3) DXing (long distance reception) on the standard broadcast bands
4) Community broadcasting (including non-commercial and clandestine stations).
5) Pirate broadcasting (especially non-shortwave, domestic pirates).
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.

9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.
13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

-=*=- POSTING -=*=-

1) Post to rrb as you would any other Usenet group. The software does the rest.

2) Email your article directly to rrb@airwaves.chi.il.us. Using other addresses to post will needlessly delay your article. You might consider installing an alias in your mailer for emailed articles, especially if you post a lot of stuff. See the end of this file for all applicable addresses.

-=*=- POSTING GUIDELINES -=*=-

* If you post a question that is of potential interest to others in the group, ask that replies be posted, instead of emailed to you. We all would like access to the answers.
If you do receive email replies, post a summary to the group. This forum is only as good as it's posters and readers. Keep the info flowing.

* If you email an answer to a question, send a Cc: to the group's submission address, rrb@airwaves.chi.il.us, so we can all learn from your knowledge. When id doubt... POST POST POST! :-).

* PLEASE edit quoted text to a minimum! Most users of this group are fairly regular readers and do not need, or want, to read the entire text of a recent article in every reply. Of course, if the thread is less current, more quoted text may be appropriate. Use your brains (and your editor :->).

* If your message is basically a one or two line "Me Too" or "I disagree" post, consider emailing it to the poster. However if you go into some details as to WHY you agree or disagree, then please post it.

* If you are replying to an article in the Internet Radio Journal, simply use your mailer's reply feature, and again, edit the text to ONLY the article you are replying to, and include the article's name in the Subject field. Subjects of "Re: Internet Radio Journal" are confusing and may result in needless delays.

* If you post about a local radio station or personality, realize that 95% or more of the readers will know little or nothing about it. Offer a little background, like location, station format, type of

music played etc.

* Last but not least, avoid flames and personal insults. R.r.b has a high percentage of broadcast professionals among it's readers. We try to maintain a reasonably high brain to bulls*it ratio here. It is perfectly fine to say "I think that what you said is the stupidest bunch of crap I have ever heard", instead of "YOU are the stupidest jerk I have ever heard". If you *must* make personal attacks, do it in email.

-=*=- MODERATION -=*=-

R.r.b is a _very_ loosely moderated group. Normally, all legitimate articles will be posted to the group. Matters that may cause an article to be rejected by the moderator include...

---

* Articles which are not on (or reasonably near) the stated charter and scope of the group (domestic radio broadcasting) or pertain to 'non-broadcast' radio services, such as cellular, two-way, ham, citzens-band, and such.

* Articles that are too long for submission as-is. If your article is longer than 10k (10,000 bytes), consider splitting it into two parts, or better yet, edit it down to a more reasonable size. Check to see if you can eliminate any quoted text. If you believe that your article is of an especially urgent or inforamative nature, and you also feel that you cannot reduce the size without damaging the content, let me know and I will try to work with you.

* Articles which are merely multiple repetitions of an identical answer which has already been offered several times. Often these will be bundled together into a single article to conserve bandwidth and increase readability.

* Articles which contain 'miles' of quoted and multiple quoted text followed by a few lines or less of original text. Please edit quoted text to a minimum and try to adhere to the *50% rule*, that is 51 (or more) percent of original text to 49 (or less) of quoted text. If the thread is not curent, more quoted text is appropriate. Only the worst offenders are omited, usually I will edit quoted text myself, when I have time.

* Articles which are unwarrantedly offensive, abusive or contentious for the sake of contention. Personal attacks and ridicule are considered such. Discussion, even argument, of issues and opinions are welcomed and encouraged. Flame-wars and such are not. We have discussions here, not shouting matches.

Note: Since most articles are used, we do not send out confirmations. If your article *is* rejected, you WILL receive a note explaining why the action was taken. If you do not receive such a note, and you do not see your article in the group, notify the moderator at once and include a backup copy if you have one.

-=*=- ARCHIVES -=*=-

Archives of past Internet Radio Journals are kept for anonymous FTP at
deja-vu.aiss.uiuc.edu . They can be found in the directory
/misc/rec.radio.b-cast. In that directory you will find a file called
INDEX, which contains the issue numbers of all Journals, and the
title of each article contained within. The archives are updated
every week or so. If you need help with FTP, write me.

The Journals are arranged in sub-directories of about 100 issues each,
and are in compressed (.Z) format. Remember that compressed files
should always be sent using the "binary" mode. If you have trouble accessing
anything, or if you have any questions about the archives, send email
to rrb@deja-vu.aiss.uiuc.edu. If you appreciate the archives, send
your notes of appreciation to the site admin, C. Lance Moxley
<lance@deja-vu.aiss.uiuc.edu>. He has been very gracious in his
willingness to store our archives on his machine.
* Please do not bother the system admin with problems, direct those to me. *

-=*=- ENJOY THE GROUP! -=*=-

I hope you enjoy the group. Remember, it is only as good as it's
contributors. So don't be shy :-). If you have a question, or answer,
even if you are not sure, post - post - post.

I am open to suggestions on how to improve this group. Send them via e-mail
to wdp@airwaves.chi.il.us -or- rrb@deja-vu.aiss.uiuc.edu.

Thanks to all who have, and continue to, participate.

We now return you to your regularly scheduled newsgroup :-).

# 865. AMARC-Europe: making headway

Newsgroup: rec.radio.broadcasting
Date: 1993-06-22 05:19:40 UTC
From: om@web.apc.org
Message-ID: <1993Jun22.051940.10104@gagme.chi.il.us>
Source record: 43003

AMARC-Europe: making headway
==========

AMARC's European activities have been unfolding at a rapid pace over the past few months. European delegates at AMARC 5 created a European Working Group, with representatives from over ten countries. A regional AMARC office was established shortly afterwards, hosted by the Community Radio Association (CRA) in Sheffield, England. Its priorities were identified as research and action on legislative issues, training, programming exchanges, the development of closer links with central and eastern Europe, and collaboration and solidarity with radio projects in the South, particularly in Africa.

The European working group meets

AMARC's European Working Group held its first meeting of the year in Paris, last February. The meeting was hosted by the National Confederation of Free Radios (France). Ten European countries were represented.

Each participant gave a short presentation on community radio in their country, along with an overview of its legislative situation. Helle Gudnitz of the Soros Foundation gave a short summary of the situation in seven central and eastern European countries. Common problems were identified as the concentration of the broadcast media in the hands of the commercial sector, a lack of legislation favorable to community radio, and a lack of funding, especially for training.

Action, not words...

Participants then moved on to discuss the plan of action adopted at AMARC 5, and the consolidation of specific activities.

Training: Participants reported on training for community broadcasters in their countries. They also discused the Euroform training project, currently in its first phase in Great Britain. Euroform is designed to provide skills to new community broadcasters. Courses in production and management are being conducted in conjunction with the CRA.

Those present agreed that developing Euroform in other European countries should be a priority, as it could eventually lead to the establishment of a pan-European training system.

Legislation: A representative from Radio Contrabanda FM (Spain) requested that a summary of the legislation for community radio in each country be compiled, with the aim of making recommendations to European legal institutions. It was also agreed that a European Charter for Community Radio be developed, based upon the existing charters of community radio associations. Digital Audio Broadcasting (DAB): It was noted that DAB is being used by state and commercial radio organizations to bring about a restructuring of frequency distribution in Europe. It is therefore urgent to agree on a common position to protect community radio stations.

Other topics for discussion included programming exchanges, to be carried out in collaboration with the InterKonneXiones project (IKX Germany); copyright; global solidarity with stations in the South; and the consolidation and funding of the regional office in Sheffield.

The next meeting of the working group will be held in Frieburg, Germany, on June 21st.

Other activities

AMARC-Europe prepared a response to the European Commission's Green Paper on Pluralism and Media Concentration (see page xx), arguing that community radio makes a vital contribution to media pluralism and democracy, and calling for structural recognition of the community radio sector at a European level.

Additional priorities for AMARC-Europe are the development of closer links with European community radio groups, and the recruitment of new members.

Steve Buckley
Coordinator of AMARC's European office

AMARC-Europe publishes a newsletter in English, French and Spanish. If you would like to subscribe, or for more information about AMARC's European activities, contact their office:

## 866. Urban stations are WHAT?

Newsgroup: rec.radio.broadcasting
Date: 1993-06-22 05:19:48 UTC
From: r.lightwood@trl.oz.au
Message-ID: <1993Jun22.051948.10121@gagme.chi.il.us>
Source record: 43005

fishbein@shark.gsfc.nasa.gov (Jeff Fishbein) writes:

>How Radio Stations are Rated

(stuff deleted)

>Urban is a female oriented format (white females, BTW); CHR (Contemporary
Hit
>Radio, a/k/a Top 40) is teen dominated.

WHAT???!!! I was under the impression that Urban stations were targeted towards a black audience, and featuring rap and R&B. For example, WGCI FM Chicago has been described in this newsgroup as an Urban station (see ARbitron Chicago results printed in this group). I have heard a tape of that station and it definitely sounds to me like it is targeted towards a black audience (mostly R&B type music, virtually nothing from the Top 40 singles charts).

WBBN FM, which is a top 40/dance station, would be what I call a station targeted for a white audience, albeit a white teen audience.

I am so confused! Could someone please help clear my confusion.

Thanks in advance.

# 867. Re: WITH and WHLP (Baltimore)

Newsgroup: rec.radio.broadcasting
Date: 1993-06-22 05:20:26 UTC
From: fybush@world.std.com
Message-ID: <1993Jun22.052026.10190@gagme.chi.il.us>
Source record: 43004

To summarize the original posting:

WITH(AM) has been big band for years...but many of the air personalities recently left.

WHLP(AM) just converted to big band from help-wanted, stealing many of the former WITH jocks.

Why?

The deal was: WHLP was not making money with the help-wanted format. Meanwhile WITH was set to be sold to the same people who are buying WNTR(1050) in Washington and WPRW(1460) in Manassas VA. So WHLP figured it would grab the WITH jocks and format, which were about to get dumped anyway.

Only problem was...the WITH deal fell through. So until it can be completed, WITH had to hire new jocks to keep things running.

Eventually WITH is supposed to simulcast a kids' radio format with WNTR and WPRW.

-=Scott Fybush - fybush@world.std.com=-

# 868. WITH vs. WHLP Baltimore

Newsgroup: rec.radio.broadcasting
Date: 1993-06-22 05:24:24 UTC
From: Robert Carpenter <rc@cmr.ncsl.nist.gov>
Message-ID: <1993Jun22.052424.10313@gagme.chi.il.us>
Source record: 43006

Thanks to the earlier poster for some info about these stations. He then questions how Baltimore can support two big-band / standards stations.

As I understand it, it won't for long. WITH has been purchased by the "Kid's Radio" people who own 1050 Silver Spring, MD and 1460 Mannassas, VA. As soon as the purchase has been approved and the transfer occurs, WITH will switch to Kid's Radio.

I'm much impressed with WHLP's format (and awful call, explained by the earlier poster). They do a much better job with teir format than, say, WWDC(AM) Washington. WWDC seems to feel that 40s/50s big band and lite rock appeal to the same people. They are also satellite fed except M-F am drive, and have a very "dead" personality/sound.

All this mixed-format stuff reminds me of way-back-when I was driving across central Nebraska when there was only one FM station from Lincoln to Scotts-bluff. Each 15 minutes was formatted with one showtune, one light classical snippet, one current-pop-tune, and one country tune - surely they thought it would please "everyone". IMHO, it would offend everyone without regard to age, race, country-of-national-origin, etc., etc. AAaarrgh.

73, Bob w3otc@amsat.org

## 869. WITH and WHLP (Baltimore)

Newsgroup: rec.radio.broadcasting
Date: 1993-06-22 05:24:46 UTC
From: bz820@cleveland.Freenet.Edu
Message-ID: <1993Jun22.052446.10346@gagme.chi.il.us>
Source record: 43007

I'll explain the situation as far as I know it, and I'd like to know why the following took place.

A few months back, WITH-AM 1230 was bought, and the Personalities weren't sure what would happen. WITH-AM plays bigband music. It looked as though they'd change format.

Meanwhile, WHLP-AM 1360 has been a job radio station. They offered job announcements over the radio (kind of like the want-adds in a news paper.) This format only lasted a few months. About a month or so ago, I flipped around the AM dial as I often do, and found that WHLP changed format from job radio to big band, taking most of the WITH personalities to WHLP. Some of WHLP'S personalities went to WITH, but the station continued playing big band music.

Now, we have two competing big band stations, each saying they are the best. Do you think that WHLP changed to big band on their own, but that kept WITH from changing to another format for the competition?

Can someone explain what happened with that transaction as far as format, etc?
I didn't expect that to happen.

Thanks,

Chris

[Moderator's Caveat: I was not sure what to make of this post. It sounds kinda fishy, but then again, it might be real. Use your best judgement and let me know what, if anything, you-all find out. Bill]

Shortly after ordering my FME kit from Panaxis, I received this interesting piece of mail. Because it concerns most of us here, I thought I'd pass the info. along. Whether or not you care to contribute is up to you, and by posting this, I'm merely letting you know of a fellow broadcaster in need. Anyway, please read it and I'll let you decide. (Any typos are mine. Sorry for the length.)

88.9mHz ARIZONA'S MOST CONTROVERSIAL RADIO"

FOR IMMEDIATE RELEASE

JUNE 13, 1993

TO: LOW POWER "MICRO RADIO"
OPERATORS, ENTHUSIASTS
AND OTHERS IT MAY CONCERN

Ladies and Gentlemen:

This letter comes as an effort to familiarize you with myself, who perhaps like you, owns or would like to own a low-power FM radio broadcast station. That possibility may be very soon on the horizon, as I am currently fighting the Federal Communications Commission for your and my rights to broadcast.

Though I did not make it my career, I have always had an interest in radio broadcasting. Over the years it has become increasingly obvious that radio programming is geared only towards those topics that are commercially lucrative. Furthermore, broadcasting has evolved into a mega-buck enterprise where only the wealthy have the "right" to play! This is a far cry from the early days of radio, where many stations started out in an individual's home.

Through a good deal of research and perseverance, I managed to assemble a reasonable radio studio in a small shed in my backyard. I purchased a 1/2 watt FM transmitter and installed a hand-made antenna on a 36' mast. The studio contained all the necessary equipment to monitor the station's power output and frequency to assure that the station would not interfere with any other broadcaster. Using books available at the local library, I researched

the FM spectrum and selected an "open" frequency where there was no chance of inter- fering with any licensed broadcast station. None of this was done in secrecy: I notified the media AS WELL AS the FCC of my intention to broadcast. The premise for the operation of my station, which covered an area in a radius of 2-3 miles from my home, was "community access" radio. Most of the programming was talk oriented. There were some locally produced shows featuring political commentary from both the "left" and "right." Most importantly, everyone was invited to express their opinions, or in fact, to produce their own shows!

The broadcast schedule was Sunday through Friday from 6:00 - 10:00 p.m. Of course, the FCC eventually came calling, and under the pretense of their imag- inary "authority," attempted to inspect my station. This attempt was rebuffed by myself. I did agree to temporarily suspend broadcasting pending negotiation of a manner to resume the activity free from harassment. However, the FCC attacked by a "finding" of a statutory violation of operating without a license.

Of course, most of you are aware that there is no provision for the issuance of an FCC sanctioned "low power" FM license. The FCC was not going to give an inch as I proceeded through their administrative circus of appeals. Since then, I have taken the matter to the Ninth Circuit Court of Appeals in San Francisco. The issue of low power FM broadcasting has been extensively briefed by my lawyers and is now pending the Court's review.

My legal remedies have not been exhausted, but as you can guess, I am finan- cially exhausted. One of the reasons that the government gets away with so many tactics like this is because the average citizen can not afford to chal- lenge the Washington bureaucrats. My attorneys view this as an exciting test case for low power FM broadcasting, one that may open the door for the respon- sible operation of low power FM stations. The pursuit of this case has cost me a lot of money. I owe a large balance to my attorneys, and will have great difficulty in paying it on my own - if at all.

Yet look at what is at stake! The bulk of the government's defense has been to stall and attempt to dismess. Obviously, the FCC never thought that I would fight back...so many others have merely capitulated and succumbed to the FCC's threats. Even if you do not own a low power FM radio station, or have nodesire to engage in this activity, a clear victory will send a loud message to the Washington officials: WE THE PEOPLE have spoken!

With that in mind, my law firm and I have agreed to the establishment of a trust fund for the legal defense of KAPW (please see attached letter). When money is contributed, it will be used to fund the continuing obligations/legal actions that I must maintain to obtain a Court ruling allowing me to broadcast.
I now invite you to send any funds which you can spare in care of my attorneys, whose address is on the attached letter. A receipt will be sent to you, as well as a note of progress as the case continues.

Your assistance will be greatly appreciated, as both myself and my attorneys think that there is the possibility of a major positive step in the direction

of legitimized and legalized low power FM broadcasting. Your assistance in this cause will be greatly appreciated.

Sincerely,

(signature)

Bill Dougan

Re: Dougan adv. F.C.C.

Dear Bill:

Pursuant to our conversation regarding how to pay your substantial outstanding balance with this firm, we have reached agreement that we will assist in establishing a defense fund trust for you. The intention of the trust fund would be to help you in meeting the financial obligations you have already had to the firm, plus expenses for other future actions taken, as necessary, in regard to the F.C.C. case.

We will separately account all contributions which you or others so designate to in our Arizona State Bar Foundation Trust Account. Those funds shall be separately accounted from others, so that all contributions are rec-ognized specifically for the benefit of representing your cause. We shall also keep you apprised to the total contributions received. Further, the two of us agreed to correspond periodically so as to inform those who are able to contribute, as to the status of your case as it proceeds.

As we have now agreed to set up this fund, we wish you well on getting the word out to those who maintain as interest in your broadcasting and/or may have similar intent to exercise their right to broadcast.

We reaffirm to you our belief that this case can be a significant test case in this area. From both a financial and a informational stand-point, we look forward to the additional support your efforts will now bring.

Very truly yours,

(signature)

A friend lent me a tape and on it were 2 guys, from New York, who called up people and made prank phone calls. It was so funny I took the tape with me to parties and rolled with friends as we listened to it (how much rolling, that's my business). Anyway, does anyone know who I'm talking about? Here's a sample 'call':

"Hello?"
"Yeah, calling about the job."
"Have you called before."
"No. Did you reognize my voice?!"
"Uh, no, I don't usually answer the phone."
"Listen, I don't need to talk to you, tough guy. Get your boss on the phone."
"Ok, hold on."
"Hurry up, tough guy."

and another one...

"Yes, do you do laser surgery?"
"Yes, we do."
"Well, I got hemorrhoids bad..it's killing me!"
"Okay, you need to make an appointment. When can you come in?"
"As soon as possible! This is killing my ass!"
"How about tomorrow at noon?"
"You don't understand (scream). It's ripping me a new ass!"
"Sir, please use the correct terminology."
"But you don't understand (scream) I'm *dying* over here!"

If anyone knows anything remotely of what I'm talking about, I'd really like to know more about these guys, and how much material they have out.

thanks,

John

>news dept who let a drunken newsman go on the air the day of
>their holiday party a few years ago?)

I doubt it; the AM Program Director is also the AM and FM News Director
and the GM's butt boy. I doubt it was an oversight.

I posted the original ... no, I'm not bitter. But I know a few TV and
newspaper people who were after being pulled into the hoax. And yes,
WTIC is the station that let a completely drunken newsman on the air on
Christmas night several years ago. He was as drunk as any conscious
persion I've ever heard. I have a tape of it somewhere; management had
the documentor tapes erased, but the tech on duty at the time was a friend.

# 877. UN Radio on Yugoslavia

Newsgroup: rec.radio.broadcasting
Date: 1993-06-22 05:35:40 UTC
From: "Alfredo E. Cotroneo" <100020.1013@CompuServe.COM>
Message-ID: <1993Jun22.053540.10737@gagme.chi.il.us>
Source record: 43016

NEXUS-International Broadcasting Association
adds more United Nations Radio news
on the current situation in the ex-Yugoslavia.

UN Radio news coverage of the activities of the organization may be heard in Europe, Middle East, North Africa, and in the Americas with first hand reports from UN Headquarters in New York, via IRRS-Shortwave transmissions from Milano, Italy, on 7,125 kHz (41 meter band, Shortwave).

STOP PRESS - STOP PRESS - STOP PRESS - STOP PRESS - STOP PRESS

Milano, Italy - 18 June, 1993: The latest news from the United Nations on the current situation in the ex-Yugoslavia are being heard now every week on IRRS-Shortwave from Milano, Italy, on 7,125 kHz (41 meter band, Shortwave), with comprehensive coverage of the entire European Continent, North Africa, Middle East, and reception extended to the farthest regions of the world during the 02:00-03:00 UTC transmission.

Additionally, from 14 June to 25 June, 1993, IRRS-Shortwave will also provide daily UN Radio coverage of the meetings of the World Conference on Human Rights, in Vienna, Austria, with reports in English, French and Russian.

Other regular United Nations Radio programmes may be heard via IRRS-Shortwave from Milano daily in English from 09:30 Central European Time, and every Sunday in English, French, Spanish and Russian at various times, including the latest news on major developments at the UN Headquarters, and in other regions of the world (e.g. Somalia).

--
With its seat in Milano, Italy, NEXUS-International Broadcasting Association is a strictly non-profit association founded under Italian Law which operates IRRS-Shortwave to Europe and IRRS-Globe Radio Milan on FM. NEXUS-IBA, which is designated as an independent "Community Broadcaster", according to the Italian Broadcasting Law of 1991, makes available broadcast time at cost to members of the Association, with no commercial advertising on the air and, currently, with no corporate underwriting. United Nations Radio is one of the members of NEXUS-International Broadcasting Association. In addition to the UN, membership also includes to date UNESCO, the British Broadcasting Corporation (BBC), Deutsche Welle, Pan American Broadcasting Company, and a number of private individuals.

For a direct impression of the NEXUS-IBA / IRRS-Shortwave operation, you may tune in Europe to the Shortwave frequency 7,125 kHz (41 metre band) daily from 02-03 UTC, 07:00 to 10:00 Central European Time (CET), and from 18:00

to 22:00 CET; (to 23:30 CET on Sat and Sun). In Milano, Italy, NEXUS-IBA is on the air on 88.85 MHz FM with programming in the English language from the BBC and Deutsche Welle.

# 878. Radio Brod 720 kHz

Newsgroup: rec.radio.broadcasting
Date: 1993-06-22 06:27:26 UTC
From: tijoma@uta.fi
Message-ID: <1993Jun22.062726.11916@gagme.chi.il.us>
Source record: 43015

Here is finally the address of Radio Brod:

Radio Brod, Droit de Parole, c/o Visa Residence, Via Dante 461,
I-70123 BARI, Italia.

This address originates from Italian dx'ers and the Finnish DX-Association.

Radio Brod is broadcasting to ex-Yugoslavia from a ship anchored at the
Adriatic Sea. The station says it broadcasts objective news ignored by the
official radio stations of ex-Yugoslavia. Radio Brod operates on 720 kHz
with a power of 50 kW. They plan to increase power to 100 kW as reception
in Eastern parts of ex-Yugoslavia, particularly Serbia is poor. However,
Radio Brod can be heard around Europe during night-time on 720 kHz.

The station is operated by journalists from various parts of ex-Yugoslavia
and it is financed by the EC and several human rights foundations in Europe.

# 879. Administrivia: Articles that beg for money? Yes or No?

Newsgroup: rec.radio.broadcasting
Date: 1993-06-24 23:39:15 UTC
From: wdp@gagme.chi.il.us
Message-ID: <1993Jun24.233915.21362@gagme.chi.il.us>
Source record: 43019

Greetings readers:

I am planning on making a new criteria for article rejection on this group.

I will be doing so, barring 'meaningful objection' in about a week. That criteria is 'money begging' articles.

I have gotten some email to the effect that many readers are unhappy about the blatent 'begs for funds' which are disguised as radio-related articles in order to pass moderation on this group. The most recent being the so-called pirate in Arizona who is allegedly fighting the FCC for his right to broadcast w/o a license, but there have been many others, and the trend seems to be increasing.

I have already killed a few articles that were absolutely unabashed begs and scams, but have tended to lean toward permissiveness, meaning that if the article has even a remote connection with radio, I have been validating them and posting them.

I will still take these on a case-by-case basis, but I will be adding this to the periodic 'welcome to rrb' message that is posted from time to time, unless a substantial amount of readership offers persuasive arguments in favor of such articles. Judging by the response thus far, these submissions are not very welcome here.

So please let me know about this matter. I will not be posting replies to this, since it is not 'broadcasting related' and therefore I dont want it to become a thread. Send your feelings on the matter to wdp@gagme.chi.il.us with the subject header containing the word 'beg' somewhere in it.

<< PLEASE DO NOT SEND THESE REPLIES TO THE RRB@AIRWAVES.CHI.IL.US ADDRESS >>

Thank you

# 880. Re: Dougan vs. FCC!

Newsgroup: rec.radio.broadcasting
Date: 1993-06-24 23:39:29 UTC
From: john@zygot.ati.com
Message-ID: <1993Jun24.233929.21391@gagme.chi.il.us>
Source record: 43017

cdimick@esunix.sim.es.com (Clint Dimick) quotes Mr. Dougan:

> This letter comes as an effort to familiarize you with myself, who perhaps
> like you, owns or would like to own a low-power FM radio broadcast station.
> That possibility may be very soon on the horizon, as I am currently fighting
> the Federal Communications Commission for your and my rights to broadcast.

Some of you may be familiar with the name Lorenzo Milam. During the 1970s he was one of the leading proponents of community and alternative radio, writing volumes about the evils of bland, homogenized commercial radio. The man is a genius, surrounding himself with attorneys, engineers, and all manner of people representing cumulative centuries of professional broadcasting experience.

Milam has written about the topic of low power broadcasting as an advocate and has appeared on numerous talk shows discussing his views. With an associate, Jeremy Lansman, he has participated in the creation of dozens of radio and television stations. His creative and sometimes ersatz view of law and FCC regulations has given him the destinction of being perhaps the number one thorn in the side of the FCC.

Milam's escapades are documented in his writings and in public record, all available at any library worth the name. What is my point? At no time in the many years that he was actively involved in the creation of that which is now known as community radio did Milam ever suggest, assert, imply, or even hint that there was any possibility that one could go on the air with an unlicensed transmitter and get away with it. His strange and sometimes alarming stations all carried a bonafide FCC license.

We are talking here about a man who had the will and the way if there ever was one to "fight the system" to accomplish his agenda, and yet there was scant, if any, effort to suggest that it was possible under current law to broadcast without benefit of license. So if you believe that this fellow has got something here...

> Through a good deal of research and perseverance, I managed to assemble a
> reasonable radio studio in a small shed in my backyard.

Something does not ring true here. There are no real technical details. Was this "1/2 watt FM transmitter" type-accepted? I have never heard of a clean, broadcast-quality device of that power. If not type-accepted, was a spectrum analysis done to ensure cleanliness? I am afraid that I would not trust someone who had to read "books available at the local library" to respect the frequency separations and other considerations necessary to prevent interference.

A couple of kids did this a few blocks from my home and splattered all over an adjacent commercial channel. Since they had stupidly given out a phone number, I called and complained. In their infinite wisdom, they had decided that no one would really listen to the classical station they were clobbering.

> However, the FCC attacked by a "finding" of a statutory violation of
> operating without a license.

And I will bet they make it stick. Even after you have exhausted all of your money and any other funds you are able to attract.

> The issue of low power FM broadcasting has been extensively
> briefed by my lawyers and is now pending the Court's review.

It is a good thing you are using attorneys who are not specialists in broadcasting law. None of them would touch this with a ten-foot pole.

> Yet look at what is at stake!

What? The ability of a bunch of kids to run around putting splattery, junky signals on the air and call them "radio"? I am above all a governmental minimalist, but a bunch of radio wannabees spewing RF garbage all over the spectrum is not something we are in desperate need of right now.

> Even if you do not own a low power FM radio station, or
> have nodesire to engage in this activity, a clear victory will send a loud message to the Washington officials: WE THE PEOPLE have spoken!
>

Excuse me, what is the message?

> With that in mind, my law firm and I have agreed to the establishment of a
> trust fund for the legal defense of KAPW (please see attached letter).

If you were in jail, wrongly accused of some technical malfeasance, I would be first in line to help with money and techincal assistance. But I cannot imagine forking over funds to legitimize your desire to play sandbox radio. If you have such a burning desire to participate in radio broadcasting, get off your butt and get out there and get involved. There are places that would kill to get a community station (licensed, of course) established. Instead of handing over money to attorneys, use it to put REAL radio stations on the air--not worthless toy projects for your temporary amusement.

> I now invite you to send any funds which you can spare in care of my
> attorneys, whose address is on the attached letter. A receipt will be sent
> to you, as well as a note of progress as the case continues.

And I would invite anyone reading this to take that money and help start an educational station through proper channels. Go to one of the hundreds of smaller markets and create something worthwhile. Who cares about some amateur play broadcaster's "right" to sandwich a worthless signal in between commercial stations in a major market?

Take your whinings about the "big boys" stomping on the "little people" and dump them where the sun don't shine. As someone who has paid his dues in radio (as salesman, owner, engineer, DJ, and a few other unmentionable positions), I hope you lose your case big time. And I hope you are sufficiently drained of resources that you never try it again. (Come on, John, say what you really think!)

[Moderator's Note: Oops, looks like someone pulled Higdon's chain again :-). I kind had the same impression about this guy, only I was more wondering if it was a scam to get free cash from sympathetic netters. I have heard of that being done before, a time or two. Bill]

>they have out.

I have heard this before. When I was at college, the guys who lived across the hall from me had at least one tape of these guys. At the time I didn't know any more about it. I didn't know where or how they had gotten a hold of the tape, and assumed it was something that was spread underground.

98 Rock in Baltimore (WIYY, 97.9FM) airs one of these calls from time to time in between songs. Just yesterday I heard one where the prankster was harassing the receptionist at an opthemologists office where he had just told the doctor he was a customer.

It surprised me when I first heard one on the air... I had always assumed that such a tape was illegal. Aren't there laws against this sort of phone harassment? (Okay, well I know that having the tape and making the tape aren't the same thing, but...)

The name of that outfit is "The Jerky Boys". They're two guys from Queens.
(nobody knows their real names except for the record company exec who
signs their pay checks; It was rumored that they're actually members
of the NY-based rap band "The Beastie Boys" but that's unconifrmed)

You can buy their album,which is a collection of prank calls to businesses
in NYC area, at any major record store that has a comedy section. Another
album which has more of the same is planned for the end of the year.
Billboard ranked their album #1 for a few weeks in the Heatseekers
Chart - non-music recordings. They're currently at #121 on Billboard
200 album chart. Not bad for a collection of bootlegs!). Howard Stern
has been their biggest fan and thinks they're the funniest thing to come
in years.

WBCN-104.1FM in Boston,began playing their bits during the weekday Comedy
segment at 5:05pm about a year ago. The bootlegs of "The Jerky Boys" have
been circulating up and down the East Coast for a few years now. They finally
decided to make an album out of it.(Only in America! Or as Yakoff
Smirnoff would say,"Whatta country!")

Some of the stuff is really funny. Most of is pretty sophmoric,though.
Radio stations that would venture out to play "The Jerky Boys" during their
comedy breaks should have a fun time with the bleep button.

Does anyone know if Howard Stern has an internet address?
Wouldn't that be cool if he could receive messages during his
radio show just as he does phone calls and faxes?

Please, if you're not a fan of his...I don't need to hear
it....Serious responses only.

[Moderator's Note: Someone posted an address for either Stern or some other guy associated with Stern. It might have been Charles Kunz (sp) who posts the station lineup/FAQ for H.S. But even if he does have an Internet address, if I were stern, I would feel that it was just one more distraction to get such messages. But then again, I am not Stern :-). Bill]

# 887. New 'no-solicitation' policy for RRB/IRJ

Newsgroup: rec.radio.broadcasting
Date: 1993-06-29 05:44:04 UTC
From: wdp@gagme.chi.il.us
Message-ID: <1993Jun29.054404.18294@gagme.chi.il.us>
Source record: 43025

Recently, I asked the group to respond on the question of whether or not to continue to validate articles that blatantly solicit (beg) for funds for one project or the other. Of those who replied, the overwhelming majority felt that such articles were a waste of time, or not appropriate for the forum.

In fact, commercial postings are prohibited by NSFNET guidelines anyway.

So effective immediately, I will no longer validate postings that seem to be little more than begs for funds. I will try to be liberal (excuse the term) in my interpretation of the matter, and I will continue to allow 'news' articles which discuss funding problems, provided no direct appeal for contributions is given and no address to send funds to is given. I will allow such posters the freedom to place a line in the article directing all inquiries to themselves, after which the matter is in private email and out of my hands.

I will send a file of the complete text of all replies to anyone who requests it. Send any such request to wdp@gagme.chi.il.us with the words 'results' in the header and a brief line describing what you are requesting. I will honor such requests until the week ending Friday July 9th, after which I will delete the file. Do not send these request to any 'airwaves' address.

As stated earlier, I will not post any of the replies.

Take care..

Bill

# 889. AMARC ACTION ALERT

Newsgroup: rec.radio.broadcasting
Date: 1993-06-30 06:14:34 UTC
From: resystom@web.apc.org
Message-ID: <1993Jun30.061434.8446@gagme.chi.il.us>
Source record: 43028

ACTION ALERT

UN SANCTIONS HURTING SERBIAN COMMUNITY RADIO

In June, there were extensive media reports about "Broda", a radio station broadcasting into former Yugoslavia from a ship located in international waters. Less known are radio stations operating in much more severe conditions from inside the war torn country.

Radio B-92, in Belgrade (Serbia), is one of a few existing venues for independent information about the war in the former Yugoslavia. UN-sponsored sanctions against Serbia have made it impossible for B-92 to get spare parts for their equipment. The UN Security Council has exempted independent media from the sanctions, but the exemption is not being respected.

In an effort to support the war in ex-Yugoslavia, Serbia's state-backed media provide misinformation and spread hatred. B-92 tries to counter this by giving the people of Belgrade access to opinions, views and information that are otherwise unavailable. The station is regularly the first to uncover news of Serbian politics.

Veran Matic, Editor in Chief of Radio B-92, has called for action in support of the station:

"On June 19th our broadcast was interrupted for 18 hours... In addition a certain oppression is being planned against several local radio stations in Serbia which have decided to re-broadcast some parts of our programme or are already doing so."

"At the end of 1992, the UN Security Council set the independent media in Serbia and Montenegro free from sanctions. However, with the recent reinforcement of the embargo, the importation of equipment and paper is virtually impossible, thus making the survival of independent media here uncertain...

"We are asking you to contribute to the preservation and further development of independent media in ex-Yugoslavia by letters and petitions to your movements, newspapers, and to the UN Security Council and Sanctions Committee."

Radio B-92 asks that supporters send faxes directly to the UN Sanctions Committee, as well as to your country's Department of Foreign Affairs/Secretary of State asking them to contact the UN Sanctions Committee. Your faxes can mention the following points:

1. The pressing need for Radio B-92 and other independent media to survive, given the gravity of the war in ex-Yugoslavia;

2. That the Sanctions Committee must facilitate the entry of material destined for Radio B-92 and other independent media into Serbia;

3. That the Sanctions Committee ensure that the Serbian government allow delivery of supplies to Radio B-92 and other independent media.

nhmas@gauss.med.harvard.edu (Mark Shneyder 2-4219) writes:

>The name of that outfit is "The Jerky Boys". They're two guys from Queens.
>(nobody knows their real names except for the record company exec who
>signs their pay checks; It was rumored that they're actually members
>of the NY-based rap band "The Beastie Boys" but that's unconifrmed)

Personally, i think somebody got their hands on a early-generation tape
of this and sold it to the record company themselves, with the knowledge
that the real people who did it would never come forward, because
they'd have to admit that what they did was illegal! (taping phone
calls with the other person's knowledge or permission)

just MHO....

The Jerky Boys is a couple of guys from Brooklyn who made and recorded these 'phone scam' tapes. They started as party tapes like some of you have mentioned; it is out as an available recording now. About a month ago Billboard magazine listed it as the top East Coast "Heat Seeker" which is a list of artists who haven't ever cracked the top 200 albums list.

Todd Pettengill on WPLJ (part of the Shannon in the Morning Show in NY) airs a new phone scam three times a week (MWF 7:30, 9:30) PLJs phone scams are a bit more sophisticated and better researched (ie he seems to know the terminology for whatever specialist or retailer he's calling) and some are calls to places he's recently done business:

I just bought a carpet offa you people and it's ruined, my daughter put silly putty in it so I want a new carpet
I just bought paint from the tall skinny guy and it's not white, it's orange..

Grin, sometimes he adds things in that sound official and gets away with it, like a tartacus sphincter clause for overdue library books, or trying to relate a lactose intolerance to the paint problem.

Scott & Todd put out a CD comprised of Phone Scams, looney tunes, and fake commercials last fall. It, too, made the East Coast Heatseekers list. There are a couple of tapes of nothing but other phone scams (not on the CD) going around too that I have copies of.

Source record: 43030

Believe it or not these tapes have traveled trans-atlantic and currently
are being featured on the Steve Wright show on One FM.

I was listening last Thursday and he played the one where the Jerky Boys
telephoned posing to be Oriental Cooks for a job. I must say that when driving
up the motorway (interstate) at 70mph they can be quite dangerous as it is
difficult to drive and laugh at the same time.

I hope that their record becomes available in the UK because its a long
flight
to try and get a copy!

A couple of notes for those who don't know and are interested:

One FM is a national station broadcast across the UK by the BBC broadcasting
mostly pop music and information. It has a fair amount of public service
information included and with the exception of one or two localised pockets
is the most popular radio station in the UK I believe.

The Steve Write show broadcasts from 15:00 to 18:00 hrs andis according to
many the best show on One FM. The show format is a third wave zoo with many
characters and guests. I would imagine that the following Howard Stern appears
to have in the USA is similar to the following Steve Wright has over here.

BARNEY THE DINOSAUR TO BE EXECUTED WEDNESDAY
Boston Talk Show Host To "Kill" Child Favorite During Daytime Talk Show

Boston, June 21 - WRKO Radio Talk Show Host Tom Leykis says he will "kill" public television children's icon Barney The Dinosaur during his midday talk show at approximately 1 PM this Wednesday in Boston.

Leykis says he is "annoyed by the insipidness" of the daily PBS series, aimed at young children. "I think that this show demonstrates not one whit of intelligence or originality," says the bombastic Boston talk host.

"I also believe that the crass commercialism of the program is particularly offensive. Can't little children have a childhood before being exposed to a shameless marketing orgy of videotapes, CDs, cassettes, stuffed animals, and cute little keychains? The only thing left to do is to blow the sucker away."

Leykis told his audience that his plan is to lure Barney and his little friend Baby Bop to his Back Bay studio in the shadow of Fenway Park on the premise that the pair can go on the air as guests and freely promote a raft of merchandise. He said that a group of hired hands will be lying in wait for the purple dinosaur with artillery and explosives, and that they will "execute Barney in mid-plug."

Leykis also said that Baby Bop's life will be spared, however, her legs will be cut off with a pair of Dura Shears he had hoped to receive from actor Dick Van Patten, who advertises the scissors on television. "Dick hasn't responded to our request as of yet," Leykis says.

Leykis arrived in Boston in May after five years in Los Angeles at KFI Radio. He is heard Monday through Friday from 10 AM until 2 PM, with a repeat broadcast nightly from 11 PM until 3 AM. He asks that reporters not inform Barney and Baby Bop of the plan. "They might decide to skip the appearance if they find out," he said.

~From: WBAI Pacifica Radio <wbai>
~Subject: WBAI PD Resigns

PACIFICA RADIO'S FADING VISION
By Andrew Phillips (WBAI Program Director)
june 1993

NOTE: I have resigned as program director of Pacifica's WBAI-FM New York where I have been PD since November, 1989.
The following article was written as a contructive critique for the WBAI Program Guide to coincide with my departure. WBAI's General Manager Valerie Van Isler, incoming acting program director Samori Marksman, Public Affairs Director Mario Marillo and Arts Director Anthony Sloan do not feel this article should be published at this time. I do not agree. But since I have always tried to work as a consensus program director, I have agreed not to run this piece in the WBAI Program Guide. But should you wish to use this article in part or in whole in any manner you feel appropriate, please feel free.
(Andrew Phillips)

..from the pd/"Pacifica's Fading Vision"
july 1993/august folio/phillips
I have been program director at WBAI since November, 1989. It has been a stimulating and difficult task; one I have at times loved and hated, relished and suffered. I am disappointed that I have not been able to increase our membership substantially, pleased that I have maintained peace within our station and created a deeper programming rationale which has helped WBAI's income substantially increase.

After more than twenty years in broadcasting including producing and directing film documentaries, dozens of radio features and documentaries with the Australian Broadcasting Corporation in the U.S. and internationally, and thirteen years as a contributing producer to WBAI and community radio, I am establishing a radio consultancy. Andrew Leslie Phillips and Associates will produce and distribute programs nationally. We also want to assist station's fundraising efforts. Our first client is Gary Null who goes national, once weekly this month, as The Gary Null Show. Gary will continue to be heard on WBAI five days a week.

While I will be leaving my official duties as program director, I will not be leaving WBAI. A better way to describe my exit is "stepping down." I will continue to produce "Soundscapes: Explorations in Radio, Sound and Music" and other projects too. I will continue to help coordinate radio workshops at WBAI and radio listening sessions, and I hope to find independent funding to underwrite a training workshop called the New York Radio Workshop to serve community stations in the greater New York area.

WBAI has more consistency and logic in programming today. Programs like the after-Null-lineup (weekdays-1-2pm), Wednesday evenings with science, technology, computers and communications; much more environmental programming, more drama and arts, a wider cross-section of public affairs, a consistent Morning Show, Talkback. We survive but we do not flourish.

WNYC (AM/FM) has more than 50,000 subscribers. WBAI currently has less than 13,000 subscribers. WNYC is growing. WBAI is at best static. Of course WNYC has tremendous resources supplied by the City and far fewer producers and programs to serve. Nor have they taken on the responsibility to truly represent the diversity of New York City in programming. The popular NPR programs, Morning Edition and All Things Considered attract most of the audience and WNYC pays in excess of half a million dollars a year to carry them. Nevertheless the growth of WNYC compared with WBAI's consistently low membership for the past 15 or more years is very disturbing. The changes needed go far beyond the resources of any program director. It requires a sea change and the will, vision and support to create it. WBAI will die if we don't increase our listener base.

Programming a Pacifica station like WBAI to build an audience large enough to support expenses may not be possible in our present construct. Nobody has managed it since the early seventies. WBAI's expenses are far larger than other community stations. Unlike many public radio stations that receive free board and lodging at affiliated institutions, WBAI is alone. We are further handicapped by the diversity we encourage as we try hard to reach as many different communities and interest groups as possible. These goals are commendable and sound good at board meetings so distant from the day to day operation of broadcasting and the nitty-gritty of fundraising. There is an audience for this kind of narrowcast radio but it has not proven large enough to support WBAI. For every audience segment we attract, we face the danger of alienating another. Minor league community stations with low expenses can afford that kind of radio. I don't believe WBAI can. Nor do I believe it ultimately serves the audience.

Pacifica's responsibilities have grown beyond those of simpler notions of community radio. Pacifica - WBAI particularly - has aspirations to be taken

seriously as producers of significant news and public affairs programming. This notion - of being able to produce well conceived and journalisticaly credible news and public affairs with essentially no budget in a conventional community radio model - is entirely unrealistic. It cannot work. It has not worked. We have no audience. And yet it is right to think that we should play this role. But we do not have the structure or the money to do it. And program directors do not have the power to make it happen. It is an institutional project.

For me, the job of a program director at WBAI is akin to that of a tightrope walker. The first victory is to climb up onto the wire and not stumble. To merely retain balance is commendable. To actually creep forward is amazing. To reach the other side, probably impossible. Another description of a program director's job I've heard is that of playing three dimensional chess. Program Directors are supposed to guide, even control programming but that is not the case. We are facilitators at best. There are too many factors distant from the business of broadcasting, that guide programming decisions.

Pacifica is first a political organization. Broadcasting is of lesser importance. I don't believe it was always this way nor was it the vision of Lew Hill, Pacifica's founder, but it is what we have become. A glance at agendas of Pacifica board meetings tells the story. To succeed and grow the order has to change.

I believe that WBAI and Pacifica has a crisis of identity. There is no leadership; no vision. There have been too many lost opportunities at WBAI and Pacifica, lost not through lack of support from listeners or from volunteer and paid staff, but by weak vision from the very top. From David Salniker, the Executive Director of Pacifica. From the National Board on which each Pacifica station has two representatives. From WBAI's board. From WBAI's management past and present, too overworked, too close to the trees to see the forest, scrambling to raise more and more money over the air instead of behind the scenes. Yet the Pacifica Foundation under whose FCC license we and four other radio stations operate, describes itself as "Radio with a Vision."

While Public Radio has continued to grow, Pacifica is in slow decline. Currently each of Pacifica's five stations is running a deficit that collectively amounts to hundreds of thousands of dollars. Meanwhile the national programming unit, subsidized by listener dollars, continues to expand but raises virtually no money when it pitches itself to the national audience.
And the grants sought by Pacifica's National Development Director have not materialized. It is local programming that supports the system.

For years the Pacifica Foundation has tried to establish a respected alternative news and information service to offer community radio. This is appropriate and certainly needed. Certainly the skills exist at the stations. But Pacifica has chosen to build from the center - to create national programming with a Washington-Berkeley axis rather than reach into the deep reservoir of talent at the five stations and beyond, who contribute the guts and dollars which subsidize this ill-conceived pork barrel.

Not since coverage of the Iran-Contra Hearings has Pacifica National generated anything of consequence that has raised listener dollars. And while such coverage and alternative commentary was important it was not exactly ground-breaking radio. It was simple and appropriate and NPR did it too. Why is Pacifica so dull?

One of the few ground-breaking programs created in the past ten years was WBAI's Contragate. But at no time did our mother network offer support to that stillborn babe. Contragate/Undercurrents was considered too radical, unsafe and from New York. Yet it could have grown to become Pacifica's morning service, something community radio has desired for years. Undercurrents died because it lost its funding and there was no way WBAI could afford to support it. Meanwhile, another fine independent program spawned from that era, FAIR's Counterspin, continues and is carried on more than 40 stations. It is funded through FAIR'S resources. It is not a Pacifica National program.

Pacifica's myopia was evident too in August 1990 when the Gulf crisis began. At the time I was acting manager attending what is called "the administrative council" where plans are drawn and budgets cleared for submission and approval by Pacifica's national board. I suggested at that August meeting that WBAI was on top of the story to the extent we could be with essentially no budget. We had Undercurrents in the morning and Behind the News at night, broadcast lines direct from the United Nations, and a depth of reporters unmatched by other Pacifica stations. But it was not until the war actually started that Pacifica created an amateurish national program called Peacewatch, offered to the fifty or so community radio stations that regularly carry Pacifica Network News and other Pacifica programs.

Surely there was no better growing climate for Pacifica than the past12 years of Republicanism which culminated with the Gulf War. NPR continued to grow in the eighties despite a terrible financial crisis 10 years ago. And yet NPR has grown less interesting and more mainstream leaving a bigger niche for a Pacifica-like agenda. The number of community stations has increased and the hunger for good programming has grown. The opportunity has always existed and still does.

We have not grasped this opportunity so skilled producers have left to offer themselves to NPR, Canadian Broadcasting, Crossroads and Monitor Radio. They want their work heard. After their initial brush with the professionals at mainstream outlets they lose the hunger to deal with Pacifica's inexperienced editors who are often immature and illinformed and not worth the trouble for the small amounts of money Pacifica pays. Pacifica is no longer a contender. An outgoing staffer observed wryly that: "Pacifica gives you a company car if you throw a tape recorder out the window." (WBAI is on the 19th floor!)

If Pacifica and WBAI is to succeed in any meaningful way there must be a real vision, not lip service. Pacifica is first a political institution. Broadcasting is secondary. To succeed, these priorities must be reversed. We first need to "create' or "grow" our public - to encourage an audience to enter our tent before we begin to perform. I am not a propagandist though I believe there is a place for propaganda in a broadcasting system like Pacifica's. But more important is the creation of the space and adequate equipment, the publicity and moral and financial support before the polemics begin. There has

to be intelligence and there has to be art. And there has to be the courage to change. It is not the fault of the volunteer producer staff that Pacifica has not succeeded. The fault lies at the top.

In February this year, at the Pacifica national board meeting in Berkeley, Samori Marksman, another former WBAI program director, submitted a blistering critique called: Race, Class and the Failing Pacifica Mission. It is a well constructed paper that concentrates on race and class and echoes much of what I
have written here. The opening paragraph of his paper serves well to close mine.

"At precisely the moment when elements at the apex of our national structure are locked in a misty-eyed group hug of self-congratulation celebrating what they perceive to be the foundation's great leaps forward over the past few years, those of us at the base - the hundreds of nameless, faceless and thankless producers who are the institution, and who are organically connected to the hundreds of thousands who fortify the institution - stand transfixed as we recognize that all of us are dangling on the edge of an abyss - into which some would have us leap."

Hmm, wouldn't that type of mixed music programming be like the "eclectic"
public radio formats that are occasionaly advocated by some radio fans?

Also, please remember that rural audiences may be less "segmented" than
urban audiences. In a lot of rural areas, the most important programming
may not be music as much as local interest news (obituaries and such....)

## 899. Boston Radio Waves

Newsgroup: rec.radio.broadcasting
Date: 1993-06-30 06:31:39 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993Jun30.063139.9145@gagme.chi.il.us>
Source record: 43037

* A long-awaited call letter change takes place today(6/25/93) as
WZOU-94.5FM becomes WJMN-FM to fit its new urban dance music
personality("JAM'N 94.5"). Originally,it was reported in Radio&Records
that new calls would be WJMZ(as in "JAMS") but I guess it was
incorrect info. 94.5 dropped CHR format in favor of rhythmic dance
music on May 11, 1993.

* Massachusetts-based Atlantic Radio Group which owns 3 stations in the
Boston market(WRKO-AM,WHDH-AM and WBMX-FM) and AM-FM combo in Rochester
merged with Stoner Broadcasting of Annapolis,MD and MultiMarket Media
Communications of Hartford,CT on Wedneday(6-23-93). The new company
will be headquartered in Boston and be called American Radio Systems.
ARS will have 17 stations in 8 markets as the result of this merger which should
be approved by FCC in early October. Other markets besides Boston are Rochester,
Hartford,Buffalo,Binghamton, Dayton,Ohio,Des Moines,Iowa and Louisville,KY.
Total value of all 17 stations is $100 million.

Atlantic Radio was the first company in the metro Boston to take
advantage of the relaxed FCC ownership rules when it acquired its
second AM station(WHDH-AM) in the same market and also announced
its planned merger with Pyramid Broadcasting in September of 1992.
That deal fell apart on March 5th,1993 because of Pyramid's inability
to sell its light jazz station WUNA-FM in Chicago in order to raise
much needed cash to complete the planned merger.

* Dale Arnold will stay at SportsRadio 590(WEEI-590AM) afterall.He signed
a multi-year pact with the Celtics-owned station earlier this week. For
family and economical(inability to sell a house in a depressed Mass.
economy) reasons he opted to stay in Boston instead taking NJ Devils
play-by-play job on WABC-770AM. That indicates that for the time being WEEI
will remain a sports oriented outlet. However, the chances are 'EEI
will be sold very soon. The Celtics' management will try to recoup
some of its huge operating debts with syndicated Imus who is already heard
on a Tampa station. On July 12th,Imus will start on 'EEI as well
stations in Providence and some other major market(it escapes me now).

Arnold will deliver 2 sports updates per hour during Imus' syndicated
show(6am-10am) and then host his own call-in sports talk show from
10am-1pm.
* If you listened to WBCN-FM this morning, you heard Charles Laquidara
reading a letter from Infinity's boss,Mel Karmazin, on the air during
his "Mishigas" show. In it, Mel asked Charles what he though of Howard
Stern's show airing in the mornings on WBCN(Stern currently airs on tape-delay
at 7pm)? Eventhough, Charles made a joke of it, all indications are
the change is in the air and come September(or maybe even before then)

the voice you'll hear on WBCN in the mornings will not belong to the legend of Boston radio...Recent spring ratings show Howard on top of the 18-34 male audience at night with a whopping 17.5 rating...

Stay tuned,

-Mark

## 900. Re: Ratings info sought

Newsgroup: rec.radio.broadcasting

## 901. Similar call letters, who's right?

Newsgroup: rec.radio.broadcasting
Date: 1993-06-30 06:32:44 UTC
From: "Ellis P. Carter Jr." <epj2@Ra.MsState.Edu>
Message-ID: <1993Jun30.063244.9202@gagme.chi.il.us>
Source record: 43040

I work for a 50kW FM station in Starkville, MS, with the call letters WMXU. Mississippi State University (MSU) is in the same town, and WMSU was unavailable at the time the call letters were received, so the owners took the closest thing.

Recently, the call letters WMSU became available, and were taken by a 3kW FM in the same town (and, of course, the same market). Their format is the same as ours. And, of course, X and S sound very similar when said at almost any pace, especially fast. WMXU and WMSU sound almost identical.

My question is this. Considering the call letter battle in Boston, plus any other cases which I may be unfamillar with, does my station have a case with the FCC to have the other station change its call letters on the basis that they are too similar to ours. Remember, we had them first.

All replies are greatly appreciated. Please mail to epj2@ra.msstate.edu.

## 902. Attempt to create Don & Mike newsgroup

Newsgroup: rec.radio.broadcasting
Date: 1993-06-30 06:33:17 UTC
From: mrosen@nyx.cs.du.edu
Message-ID: <1993Jun30.063317.9233@gagme.chi.il.us>
Source record: 43039

Currently over in alt.config we are attempting to have a newsgroup dedicated to Don & Mike created. You may ask, who are Don & Mike?

They are two DJ's originating in Washington, DC (really toothless Fairfax, VA) who are currently syndicated in three other markets (Baltimore, Buffalo, Tampa Bay) on AM stations (they are on FM in DC). Their home station is WJFK FM/AM, with the AM being the Baltimore station (1300 AM). They do a freestyle show where anything on their minds is the topic at any given moment. Plus, they have their share of regulars (Francis the huge breasted woman, Grace I don't think I can describe, Cassandra the transvestite Wiccan priestess, etc.) who show up to their occassional live appearances.

They have been doing this show for the past 7 or 8 years, originally on WAVA 105.1 in the mornings. WAVA has since become a religious station.

If anyone reads Radio & Records I believe an ad was placed this past week for stations to call for a demo over the phone. I don't know where I can pick up R&R in my area if anyone can help out (Baltimore).

If you are a fan or want to help us out, please jump over to alt.config and join in.

Right now the argument is over a us.* group vs. a alt.fan group. My view is that us.* heirarchy is not highly available as opposed to alt.fan groups. My own site doesn't carry the us.* heirarchy and I could see an upward fight to get other sites to pick it up should such a group get created.

Thank you,
Mike

# 903. Re: Dougan vs. FCC!

Newsgroup: rec.radio.broadcasting
Date: 1993-06-30 06:37:12 UTC

Message-ID: <1993Jun30.063712.9391@gagme.chi.il.us>
Source record: 43041

It is not a scam.

Bill Dougan has appeared on the show hosted by former Navy intel
legence and Constitutional expert Bill Cooper, called "The Hour of
the Time". It can be heard Monday-Friday evenings at 11:00 Centera
l time.

Mr. Dougan did go into great technical detail about the station it
self, and it appears to me he is fully qualified to operate a stat
ion with full adherance to FCC tech regulations.

As far as attourneys not accepting the case, maybe broadcasting la
w experts wouldnt touch it, Constitutional law experts see many ho
les in the FCC's case against Mr. Dougan.

First, since the signal does not cross state lines, the broadcasti
ng regulations are a state matter-in this case, Arizona, not a fed
eral matter.The Constitution is very clear on the seperation of fe
deral and state jurisdiction.

Second, even in the unlikely event Mr. Dougan looses the case, it i
s doubtfull the court would rule he is under FCC jurisdiction.To d
o so would put that court in direct conflict with the Constitution,
and would create a very dangerous precident-courts making laws rat
her then Congress or local governments.

I wish Bill Dougan the best of luck in his attempt to vindicate all
free radio and Constitution lovers, and get at least some of the
control away from the federal government, back to the states where
it belongs.

Also, "The Hour of the Time with Bill Cooper" can be heard on WWC
R, 7435kHz shortwave, evenings at 11:00 Central, Monday-Friday.

# 905. Radio Latacunga - Ecuador

Newsgroup: rec.radio.broadcasting
Date: 1993-06-30 06:38:21 UTC
From: resystom@web.apc.org
Message-ID: <1993Jun30.063821.9461@gagme.chi.il.us>
Source record: 43043

The voice of a people in struggle
==========

Tucui suyumanta The indigenous people
Runacuna Of the continent
Tantana cushn Will unite ourselves
Quish pirinca caman Until freedom

Slogan used by Radio Latacunga, Ecuador,
translated from the Quechua language.

Radio Latacunga celebrated its eleventh anniversary in December 1992. The station is based in the highlands of Ecuador, in Latacunga, the provincial capital of Cotopaxi. Seventy-six per cent of Cotopaxi's population is rural, fifty per cent of which is indigenous, from the Quechua nation.

Jorge Quaman, an indigenous participant who represented Radio Latacunga at AMARC 5, explains, "we believe that the protagonists of the radio work should be the indigenous companeros from the grass-roots. By slowly incorporating our indigenous people into communication media we gain. This is because what is being shared is integral knowledge, not only technical knowledge but knowledge which includes our history, our economic and social politics, and all of the realities which affect our people."

The heart of popular communication
---

"The voice of a people" is one of Radio Latacunga's many slogans. In order to guarantee popular participation, the station uses five strategies aimed at breaking the traditional, vertical communication model. They are:

1. Seven recording studios are located in the same number of peasant and indigenous organizations. Here, the same peasants and indigenous people produce educational and news programs, in Quechua and Spanish, as part of the station's rural programming.

2. A team of popular communicators works in communities that are not organized, or that are in the process of organizing. They are chosen by the communities, and record all aspects of community life with portable tape recorders.

3. Broadcast and recording studios are made available to hundreds of marginalized people, who can transmit their problems and needs, or messages for their organizations and families, by

phone or by mail.

4. Station staff regularly visit urban and rural communities, attending celebrations and other events, thus ensuring permanent and personal contact with the population.

5. Modern mobile studios can be moved to any part of the province, broadcasting live programs with the participation of the population.

All of these strategies combined break the pattern of "radio station - message - receiver;" they make sure that the people are the station, and that the station is the people.

"At Radio Latacunga, our policy is that the people be the protagonists, that the people have the voice. Our radio signal reaches ten provinces and 1,500,000 listeners. With this strong signal we want to make our real history and our real situation known, and in this way build a true and popular educational process," Quaman concludes.

## 906. Media Pluralism in Europe

Newsgroup: rec.radio.broadcasting
Date: 1993-06-30 06:38:42 UTC
From: resystom@web.apc.org
Message-ID: <1993Jun30.063842.9480@gagme.chi.il.us>
Source record: 43044

Media pluralism debated in Europe
==========

Community radio advocates argued in favor of restructuring the present regulatory situation in Europe, citing the concentration of media-ownership in the hands of a small number of trans-national corporations. This issue is crucial in view of existing legislation in several countries, where community radio stations can be bought or taken over by commercial radio conglomerates.

These citations were presented at a hearing on media concentration and pluralism organized by the European Commission of the European Economic Community (EEC) in April of this year. The consultative meeting was held to consider responses to the Commission's Green Paper on Pluralism and Media Concentration. The document outlines potential measures to restrict concentration and safeguard media pluralism in EEC countries. Over 80 international bodies from all sectors of the media, including AMARC, were represented at the hearing.

Community radio broadcasters from nine EEC states were involved in formulating AMARC-Europe's response to the Green Paper. They have called on the Commission to recognize community radio's vital contribution to media pluralism, and for structural recognition at a European-level. They also proposed measures to financial assist this sector.

## 907. Irish Community Radio]

Newsgroup: rec.radio.broadcasting
Date: 1993-06-30 06:42:51 UTC
From: resystom@web.apc.org
Message-ID: <1993Jun30.064251.9633@gagme.chi.il.us>
Source record: 43045

Ireland: a glimmer of hope for community radio
==========

At midnight on New Year's Eve, 1988, North Connemara Community Radio, located in County Galway on Ireland's west coast, switched off their transmitter, in accordance with the country's new audio-visual law. Five years later, the equipped studio, transmitter, volunteers and management are still waiting for an invitation from the Independent Radio and Television Commission (IRTC- Ireland's regulatory body) to submit an application for a local broadcasting license.

Amplify this situation many times and one gets an idea of the treatment of community radio in Ireland since 1988, when the state broadcasting monopoly came to an end. Community stations are still fighting to get on-air, despite the government's five year-old promise to license small-scale local stations and special-interest stations.

The IRTC, created under the new law, devised a three-stage strategy to implement the new broadcasting legislation. First, a national independent service was established four months after the creation of the IRTC. Secondly, 23 county stations were licensed by 1990. Finally, an undetermined number of local stations were to be licensed.

By 1992, however, not one license had been awarded to the community sector. That year, the IRTC handed out two, one-year experimental licenses to groups in Dublin. It refused North Connemara Community Radio's request for an experimental license in April, 1993.

The IRTC's approach to community radio is hardly surprising, given that their Chief Executive stated, in 1990, that it would not be possible to license local and special interest stations because they "could make life difficult" for existing commercial stations. The Commission has chosen to narrowly interpret the legislation and basically sell the airwaves to the highest bidder, awarding licenses to the safest, most uninspiring stations - those who go for the "classic hits" formula have done best under this Commission.

Pirate stations are becoming popular again, despite the severe penalties stipulated in the 1988 law. They provide a good barometer of the level of dissatisfaction with the existing radio services. However, none of the pirates are community in their

structures or philosophy.

There is a glimmer of hope for would-be community broadcasters in Ireland: the appointment of Michael Higgins, a Labor Party member of Parliament, to the Ministry of Arts, Culture and Broadcasting. The Minister is a long-time advocate of community radio who stringently opposed the 1988 audio-visual law. It is expected that he will review this law, as well as appoint a more sympathetic IRTC Commission when the present Board terminates its mandate in October, 1993.

# 908. Administrivia: Articles that beg for money? Yes or No?

Newsgroup: rec.radio.broadcasting
Date: 1993-07-07 09:29:51 UTC
From: wdp@gagme.chi.il.us
Message-ID: <1993Jul7.092951.18609@gagme.chi.il.us>
Source record: 43047

Greetings readers:

I am planning on making a new criteria for article rejection on this group.

I will be doing so, barring 'meaningful objection' in about a week. That criteria is 'money begging' articles.

I have gotten some email to the effect that many readers are unhappy about the blatent 'begs for funds' which are disguised as radio-related articles in order to pass moderation on this group. The most recent being the so-called pirate in Arizona who is allegedly fighting the FCC for his right to broadcast w/o a license, but there have been many others, and the trend seems to be increasing.

I have already killed a few articles that were absolutely unabashed begs and scams, but have tended to lean toward permissiveness, meaning that if the article has even a remote connection with radio, I have been validating them and posting them.

I will still take these on a case-by-case basis, but I will be adding this to the periodic 'welcome to rrb' message that is posted from time to time, unless a substantial amount of readership offers persuasive arguments in favor of such articles. Judging by the response thus far, these submissions are not very welcome here.

So please let me know about this matter. I will not be posting replies to this, since it is not 'broadcasting related' and therefore I dont want it to become a thread. Send your feelings on the matter to wdp@gagme.chi.il.us with the subject header containing the word 'beg' somewhere in it.

<< PLEASE DO NOT SEND THESE REPLIES TO THE RRB@AIRWAVES.CHI.IL.US ADDRESS >>

Thank you

< Text deleted of previous poster discussing a rural radio station where
vastly differing forms of music (rock, country, show tunes, etc.) were played
in the same set/program. >

Then.... in article <1993Jun30.062659.8979@gagme.chi.il.us>
cph@quake.sylmar.ca.us (charles hobbs) replied thusly..

>Hmm, wouldn't that type of mixed music programming be like the "eclectic"
>public radio formats that are occasionaly advocated by some radio fans?

Not really. Here in Minneapolis/St Paul MN, we have a "public" station
(listener-supported, but not really "public" like NPR or whatever)
that has an eclectic format like that, but it runs based on DJ shifts,
usually two to four hours long, rather than mixing the music up during
the same quarter-hour or whatever. (station: KFAI-FM, 90.3)

Talk that talk: Francophone and Acadian radio fights assimilation
==========

Language is a complicated issue here in Canada. Officially the country is "bilingual," with two official languages, English and French. This doesn't account for the many indigenous languages, nor for the dozens of languages spoken by Canada's immigrant and naturalized communities. More people in western Canada speak Cantonese, for example, than French.

Many people, especially francophones, will tell you that once you leave Quebec and eastern Ontario (the regions with the highest French-speaking population), Canada doesn't feel like the bilingual wonderland portrayed in its tourist information. Most French-speaking communities outside the province of Qubec are far-removed from the country's francophone centers, and are isolated from other French communities as well. Some, like Saint-Boniface in the province of Manitoba, face assimilation rates as high as 60 per cent.

There are about a dozen French-language community radio stations outside of Quebec. While the communities they serve are very diverse, they all promote French language and culture; many are attempting to reverse (or at least slow) the effects of assimilation.

"We are surrounded"

Radio Clare, in the Atlantic province of Nova Scotia, serves approximately 15,000 Acadians in the municipality of Clare, and Argyle. Acadians, eastern Canada's French-speaking population, comprise just under 10 per cent of the province's population. Father Leger Comeau, the President of the station's Board of Directors, explains, "We are surrounded by a sea of English_not just Canada but the United States, especially in terms of the media. There are only two French radio and television stations respectively, whereas there are dozens of English ones; the English daily <newspaper> arrives every day, but the French newspaper is published just once a week. We are invaded by English and American culture."

Radio Clare's strategy, according to Leger Comeau, is simple: "To broadcast programs done exclusively in French." This, he says, responds to a genuine need in the community, in addition to preserving the French language. "People are discovering the beauty and richness of the French language. They can communicate

in their own language by way of the radio station. Before, there was only Radio Canada (the French-language State radio service), but people didn't listen to it because it didn't affect them. Now they can listen to their own music, to news from their region... It's creating a mentality that is much more French."

A hundred years ago, francophones were a majority in the province of Manitoba. Today they comprise a mere four to five per cent of the population. Radio Communautaire du Manitoba (RCM) is located in Saint-Boniface, on the outskirts of Winnipeg. While its reality is more urban that that of Radio Clare, it faces similar problems.

Reynald Remillard, Vice President of Radio Communautaire du Manitoba, explains, "We are isolated geographically and culturally. It's difficult for young people to understand the importance of the French language; they've never lived in a milieu where French has been the language of the majority. There's a feeling of ghettoization, of marginalization." Rmillard continues, "The station is fighting assimilation indirectly. It's one more institution for the training and orientation of francophones.

"We are a community station, so it's accessible to the participation of young people. They can work in French, they can play modern music that's also in French. They get the impression that French is a vibrant language. The station has about 100 young volunteers, and we can see that their French has improved."

Serge Paquin works with l'Alliance des radios communautaires du Canada (ARC du Canada-the Canadian Community Radio Alliance), a group which represents some 23 francophone and Acadian stations and radio groups outside Qubec, including Radio Clare and RCM. According to Paquin, ARC du Canada's member stations are important because "They help safeguard the French language by broadcasting programs in French, as well as French music." These stations play a dual role: to make people appreciate the language, as well as to promote it; "To let people express their views on issues affecting their communities, in French. They are catalysts, they bring people together and create links within the community," says Paquin.

"Young people are becoming more interested in their language and culture. Generally speaking, more people are turning to this service. There are no other means of communication as flexible as radio. The stations become a tool for the survival of the community, and helps create links between the various French and Acadian communities," Paquin concludes.

## 912. Gary Null queries

Newsgroup: rec.radio.broadcasting
Date: 1993-07-07 09:34:54 UTC
From: Jerry Dallal <JERRY@hnrc.tufts.EDU>
Message-ID: <1993Jul7.093454.18850@gagme.chi.il.us>
Source record: 43049

Is there a list of stations that will be carrying the syndicated version of Gary Null's program (mentioned in the post "Pacifica Radio's Fading Vision")? In particular, will it be heard in the greater Boston or southern New Hampshire markets?

Also, I saw a recently book of his (on allergies, I believe) which refers to him as Gary Null, Ph.D. Does anyone know in what field he earned his degree and from what institution?

## 913. Baseball broadcasts (also rrb archive info)

Newsgroup: rec.radio.broadcasting
Date: 1993-07-07 09:35:26 UTC
From: dxy55@cas.org
Message-ID: <1993Jul7.093526.18882@gagme.chi.il.us>
Source record: 42903

Sometime last year someone posted a list of AM stations which have powerful signals and which broadcast major league baseball games.

Is there any chance I could get a copy of the list?

Thanks

[ Moderator's Note: Dennis, if you have access to the Internet directly from your site, then you can access the archives of the Internet Radio Journal (the email version of rec.radio.broadcasting) by doing an ftp to deja-vu.aiss.uiuc.edu. The archives are in directory /pub/rec.radio.b-cast. There is a file there called INDEX (all upper case) which will list, by issue number, the titles of all articles posted in the Journal. The issues are then arranged in subdirectories of about 100 issues each, agasin by issue number. Be advised that the Journals are all stored in compressed (.Z) format and should be transfered using the binary mode in ftp. If you do an 'ls -l' at the top level of /pub/rec.radio/b-cast, you will see a file telling you when the archive was last updated. The file is empty, but if you read the file's date column, you can see when the archives were last touched. As always, if you have any trouble with the archive, send me email at - rrb@deja-vu.aiss.uiuc.edu. This address is ONLY for archive problems or archive questions, NOT for submission of articles, etc. And as always, please send any notes of appreciation for the archive service to the site admin, C.Lance Moxley <lance@deja-vu.aiss.uiuc.edu>. Dont bother him with problems, thats why I am here :-) Oh, if you dont have direct access, I will try to mail you one or two copies of the journal if you send mail to the above address. Be advised that I will do this on a 'time available' basis. Bill]

## 915. Station "91X" heard as far as 270 miles on Interstate 5

Newsgroup: rec.radio.broadcasting
Date: 1993-07-07 09:36:02 UTC
From: wa2ise@netcom.com
Message-ID: <1993Jul7.093602.18938@gagme.chi.il.us>
Source record: 42901

Took a trip from Silicon Valley to L.A. over the 4th weekend. Was listening to a Mexican radio station "91X" (not sure of the real callsign, it's announced in Spanish at :15 and :45 of the hour ("Ekkx-Atra-ourta-Ahh Baha Mexico" it sounds like) (I don't know any Spanish, dispite my high school's 3 year attempt to teach me some). Aside from the ID, it's all English language. They play modern rock. And I could hear their signal as far as the intersection of Interstate 5 and California Route 41, at Kettleman City (small town in the middle of nowhere). That's about 270 miles from Tijuana, Mexico (where I think the station, or at least the transmitter is located). Must be a lot of power to get that far. And propably a very directional transmitting antenna, to maximize signal towards L.A. Frequency is 91.1MHz, right in the middle of the FM college radio subband (88-92MHz). Guess the Mexican FCC doesn't have a college radio subband, or doesn't care. I imagine that our FCC is less than thrilled with the presense of this "sea lion sitting in the middle of a flock of penguins". I do like the music, BTW.

[Moderator's Note: That is XETRA, indeed in TJ. Power etc is not known to me but they do pack a lot of punch. Directional? Dunno. Their AM (690) sure is! I think they have something like 12 towers. Bill]

## 916. WCXR Washington, D.C. didn't change format...YET!

Newsgroup: rec.radio.broadcasting
Date: 1993-07-07 09:39:54 UTC
From: lacko@enh.nist.gov
Message-ID: <1993Jul7.093954.19082@gagme.chi.il.us>
Source record: 42905

Well on the June 30th "press conference" broadcast live on WCXR was just a hoax to attract attention to a motorcycle give-away. Have no fear Contemporary Jazz fans, Westinghouse Broadcasting must be running out of patience with this station's low ratings. The Classic Rock format on this station is suffering. It's only a matter of time until Westinghouse (or whoever the owner is in the near future) changes the format. Let's just hope it will be a Contemporary Jazz format.

Stay tuned!

## 917. 'Christian' broadcast legislation in Poland

Newsgroup: rec.radio.broadcasting
Date: 1993-07-07 09:40:14 UTC
From: resystom@web.apc.org
Message-ID: <1993Jul7.094014.19106@gagme.chi.il.us>
Source record: 42904

```
Poland's new audiovisual law is "Divine"
========================================

Poland's new audiovisual legislation came into effect on March
1st of this year. The law created a new National Council for
Radio and Television to replace the former communist Committee
for Radio and Television. However the appointment of a Solidarity
Party Deputy as its chairperson raises questions about the
government's claim to relinquish control of the Polish broadcast
media.

While no licenses have been awarded to independent radio and
television to date, several pirate stations have begun
broadcasting in the past two years. Most of these radio stations
are private-commercial, or aligned with Solidarity or the
Catholic Church. Twelve of the country's 13 pirate television
stations are owned by one businessman.

The new law stipulates that the owners of stations caught
broadcasting after July 1st, 1993 will face up to two years
imprisonment. So far there are no clear guidelines for license
application procedures, but a last-minute addition to the law
stipulates that both public and private radio and television must
"espouse Christian values" in their broadcasts. The implications
of this clause for potential community stations remain to be
seen.

## 918. Cincinnati AM station changes call sign

Newsgroup: rec.radio.broadcasting
Date: 1993-07-07 09:40:26 UTC
From: kgw2!markm@uunet.UU.NET
Message-ID: <1993Jul7.094026.19138@gagme.chi.il.us>
Source record: 42906

FYI:

I saw a thread here a few months ago regarding WKRC-AM's sale to the owners of WLW-AM. While they called themselves 550-WLW in all their promos, their legal station ID was still WKRC. It went something like this:

"This WAS 550, WKRC in Cincinnati. NOW, we're 550 WLW."

Now, their legal station ID is just as sneaky. Their new call is WLWA, and at the top of the hour they do something like this:

"This is 550 WLW, A Cincinnati home of the Bengals."

They seem to be gradually re-recording their promos with the new call sign.

I know that there is a topic on GEnie for Don and Mike, for any of those users. I believe the topic is in the ShowBiz RT (M185;1) in Category 18.

It caught my eye when I saw that a Buffalo station signed for it.

>
Even if such a short-range signal is out of the jurisdiction of the FCC, there is still a practical limit as to how many signals can operate from a given area, without interference.

Playing radio with Part 15 wireless mikes is one thing. Setting up a transmitter with appreciable power is quite another.

Maybe in this particular case, there were few other stations around, so fewer opportunities for interference. But what about a big urban area, already loaded with stations? Everyone and his brother is going to want a station, and the result, if there is no regulation, will be another CB band on the AM-FM dials.

And, when the stations start interfering with each other, what about constitutional rights then? The right to broadcast, or the right to broadcast without being interfered with?

I agree, that there should be more access to the airwaves by a variety of organizations, not just ones with a lot of money. However, this idea of totally unregulated radio, on bands where the public has come to accept certain technical standards, is in my opinion a dead end.

## 921. Help me save our dying AM!!!

Date: 1993-07-11 03:21:35 UTC
From: Robert Alexander <rfa@hopper.acs.virginia.edu>
Message-ID: <1993Jul11.032135.16439@gagme.chi.il.us>
Source record: 42910

Hi Gang

Here's the deal...

This morning my boss came to me and gave me a challenge. He wants me to see if I can dig our A.M. station out of the hole. That seems a bit strange to be asking your chief engineer to figure out a way to put life back into a dying radio station. Well, he just happens to know that I've been in radio in some form or fashion for the past twenty years and at least half of that was on the programming side of the console. I've done this before with an F.M. station that was about to sink and he thinks I can do it again with this station

Here is a rundown of our current formatics...Have a look at this and give me what ever input you can on how YOU would improve on, add to, delete or otherwise change this set-up to make it a winner in a 250th market with 3 AM's and 6 FM's ( 2 of which are college stations).

Keep in mind this is a computer driven station and they aren't going to put a live airstaff back on.

6a to 11a Oldies (Jones Music Satellite from Colorado)
11a to 2p G. Gordon Liddy (from WJFK Washington DC)
2p to 7p More Oldies
7p to 10p Bruce Williams
10p to 11p Dr. Harvey Reuben
11p to 6a Jim Bohannon

I have a news dept. to work with and they are actually quite good. I have to use a board op on the Liddy show as they don't send any Cue tones at present but hope to have that on line in the next two months.

We are considering taking the Oldies Music off completely and taking the station all talk. One of the morning shows being considered to fill the slot is Don Imus out of NYC.. In the afternoon we are looking at both Larry King and Don & Mike out of DC. We used to have King on overnight and already have a listener base for him in this area. But, Don & Mike are really funny guys and do an interesting show. They are known in this area because DC is 100 north and word has traveled south.i

What I am looking for from this group is a little input. Like who is doing all talk. What they are doing with it. How is it standing up against other type formats in bigger markets. Is there any way talk radio can be truly competitive with music formats that do big contests and have live folks on the console answering phones and putting people on the air?

If you have a big talker in your market could you please give me the calls and who their PD is or who might be a contact at the station for me to talk to about what is working best for them.

Any help on this would be appreciated...Just think.....you could be the program director by remote control...Or maybe we could make this a group experiment and everybody could take credit for helping me to make this station successful again

Thanks
Robert

## 922. Rosen beats Limbaugh

Newsgroup: rec.radio.broadcasting
Date: 1993-07-11 03:21:43 UTC
From: ab276@freenet.HSC.Colorado.EDU
Message-ID: <1993Jul11.032143.16453@gagme.chi.il.us>
Source record: 42909

In Denver, the weekly rag "Westword" reports in its June 30, 1993, issue that last winter Mike Rosen beat Rush Limbaugh in the ratings during the period that they were on opposite each other, 10:00 am to 11:45 am MT. Rosen had a 10.1 share to Limbaugh's 3.8 share, according to "Westword." The name of the rating service is not given. Limbaugh is on KNUS 710 kHz and Rosen is on KOA 850 kHz.

Rosen is a pseudo-conservative just as Limbaugh is. A real conservative would get a 0.0 share.
---

[Moderator's Note: Dont be too sure of that last statement. I doubt that the American people as a whole would recognize a 'real' conservative if (s)he saw one. A real conservative bears no resemblance to the 'pseudo' variety that permiates the airwaves. A real conservative is in favor of minimal government and minimal laws, as opposed to the 'pseudo' variety who seem to bear closer resemblance to the pseudo-liberal' than to a true conservative. But that is another story for another group. Bill]

## 923. Radio Dramas: They knock your heart out

Newsgroup: rec.radio.broadcasting
Date: 1993-07-11 03:22:23 UTC
From: resystom@web.apc.org
Message-ID: <1993Jul11.032223.16488@gagme.chi.il.us>
Source record: 42912

Radio Dramas: They knock your heart out
==========

Radio dramas are the embodiment of almost everything that is community radio: its immediacy; its ability to inspire dialogue and new ideas - new ways of doing the same old things, as well as more traditional approaches to modern problems; its appeal to the imagination.

Radio dramas, or radio soap operas, have been around for a long time. Before television became omnipresent in many parts of the world, radio served as a form of entertainment, and friends and family would gather around the radio for a night's amusement, listening to radio dramas.

Radio dramas in their original form, that is to say, strictly for entertainment, are still around today. But new and innovative ways of using the format have emerged over the years, particularly here in Latin America.

We use radio dramas to entertain, yes, but also to educate, to confront and expose social problems, to inspire dialogue, without hitting the listener over the head. Fantasy worlds and situations draw the listener in with themes which mirror their own daily lives and values: love, loss, hardship, passion, mutual support and solidarity. Their educational value and their ability to invoke change are important, but they can be achieved without preaching, without telling people what conclusions they should come to.

My grandmother, who was blind, drew me into the world of radio dramas. Every afternoon the two of us would sit together and listen to "The Russian Cossack," or "Elisa's Secret" or whichever other one was popular. It was delightful to enter the fantastic world of voices and sounds, all the while feeling the delicate touch of her fingers on my hands, on my head.

Since then, almost thirty years ago, I have maintained a liking for the dramas, for the passions of others. The uncommon lives of the heroes and heroines of radio dramas allowed me to dream and imagine myself in worlds and situations that I have never been able to experience.

Perhaps the success of radio dramas lies in the dreams and fantasies that they evoke. We don't enjoy having our routines and frustrations reiterated. We have plenty of our own problems to

deal with.

Losing sight of past experience, when it was time to decide on which radio dramas we would produce at el Centro de Educac!on Popular (CEDEP-the Center for Popular Education), we gave in to our temptation to educate. We adapted an historical work "The Crosses on the Water," by the writer and politician Joaquin Gallegos Lara. The work documents the profound political and social crisis of Ecuador during the 1920s that culminated in the massacre of November 15th, 1922 known as "the bloodbath of the Ecuadoran working class."

We were thinking of raising awareness. Misery, disease and death ran through the chapters of "The Crosses." From there we talked about the Russian Revolution, the Ecuadorean Communist Party; in short, history.

It took lots of hard work. The day we finished taping the 38 chapters we had a much deserved celebration. The fun stopped there though, when the real problem arose: the editing. That was the never-ending story and it took almost two years to complete. We realized that we had made a mistake. The drama was slow-moving and tragic, it had no appeal and didn't capture the audience. Nonetheless, we patched it up, put it together and left it at 16 chapters.

The series was broadcast. One afternoon I was surprised by a call from the province of Tungurahua. It was a blind man wanting to thank CEDEP for having created the radio drama. He told me that they (he was a member of an association for the blind) had been able to see what had happened that fifteenth of November, 1922. They had always wanted to read "The Crosses," but their libraries didn't have such books as they were too costly to transfer to the Braille system.

Well, I was happy. It was enough to have reached the blind. At that moment my blind grandmother came to mind. She stood before the Phillips radio, turning the dial in search of "Radio Mirror." She listened, entranced, with her eyes open.
I felt a great desire to produce a radio drama for her and for all blind people. One that would make them recall their lost loves, that would allow them to see the colors of parks, something that would make them dream.

I began to think that the main function of radio dramas is imagination, to see with the ears. While planning the next radio drama that CEDEP was to produce , I searched for a story that had a larger dose of love. I found it in another Ecuadorean work, "The Indian Romero y Flores".

The novel details the life of Alfonso Romero y Flores, a mestizo who vigorously denies his Indian ancestry and tries to ascend

socially. He inherited his skin color, his demeanor and his vanity from his white father. He denies his Indian mother and scorns the poor. He falls in love but struggles against it because it hinders his ascent. Love triumphs but his life becomes complicated. He searches for work and finds himself caught up in bureaucracy and confronts the problems inherent in his milieu. He falls into disgrace. Rosario his partner is expecting a child. They live in extreme poverty. She dies in labour.

The title of "The Indian Romero y Flores" was changed to "Stolen Hearts". We not only changed the title, we also infused it with love and love conflicts and added intrigues and partings. We maintained values such as solidarity, honesty and generosity from the original story but we changed the ending. Rather than dying, the protagonist was saved by a miracle of the solidarity of the humble people of his neighborhood. "Stolen Hearts" is a radio drama about love, but it does not end in tears like a melodrama. Unlike many other radio heroines, Rosario defends the values that society is losing. She is not a pretty, aristocratic and foolish woman. Rosario is poor, she is not the hidden daughter of a millionaire, she does not fall in love with an enchanted and enchanting prince. She is sympathetic. She is a fighter.
I believe that the success in producing alternative radio dramas lies in the fact that it's possible to create more credible characters that are closer to our reality, more like ourselves, who dream and live stormy passions. We can use the same tools used by traditional radio dramas but with different objectives: reflection, reclaiming our identity, the eradication of oppressive traditions.

It isn't necessary to hit our listeners over the head in order to discuss and reflect upon machismo, for example. If we create a character that rebels and confronts their reality, we are getting the same message across, but in a positive way.

Radio dramas can be used to evoke dreams. As a myth from my country goes, loves are dreams, that is why they are precious, sweet and happen again and again. Love and dreams.

Lola Garcia Vacas

## 924. AM Stereo, Please?

Newsgroup: rec.radio.broadcasting
Date: 1993-07-11 03:26:31 UTC
From: dennis.falk@teamhbbs.com
Message-ID: <1993Jul11.032631.16664@gagme.chi.il.us>
Source record: 42911

I would like any info on the status of stations carrying AM Stereo, and any currently available receivers capable of AM Stereo reception, especially multi-mode (CQUAM/ISB at least), please. (My current AM Stereo radio, a Sony SRF-A100, is not in working condition, due to earthquakes experienced in the Humboldt Bay region of California, where I live, so I've been without AM Stereo for over a year now... :( And I love AM DXing.... :) )

I am also interested in getting AM Stereo airchecks (preferably on VHS HiFi videotapes, NTSC-standard, audio only, but will accept cassettes) from anywhere in the world. :)

Responses in e-mail preferred only for the second part; otherwise, posts to the newsgroup preferred for the first part. :)

D.M.Falk, disabled DXer

# 925. Re: Station "91X" heard as far as 270 miles on Interstate 5

Newsgroup: rec.radio.broadcasting
Date: 1993-07-11 03:26:53 UTC
From: fybush@world.std.com
Message-ID: <1993Jul11.032653.16702@gagme.chi.il.us>
Source record: 42913

XETRA-FM does indeed pack a wallop...I've heard it almost as far north as the Antelope Valley, almost 100 miles north of LA. "91X" puts out 94 thousand watts at 246 meters above average terrain, but my understanding is that the power is concentrated in a VERY narrow beam to the north. The beam is diffuse enough to the northwest that in Thousand Oaks, in Ventura County NW of LA, there's KCPB with 4800 watts on 91.1. KCPB rebroadcasts KUSC-FM 91.5 LA.

XETRA-AM packs a very directional punch on 690. When they took those calls in the late '60s they were the first all-news station to serve LA. They were owned by Gordon McLendon, one of the fathers of top 40 radio. Here's how he got around the requirement to broadcast the calls in Spanish once an hour:

At :59 he would run an ad in English promoting tourism in Baja. As the ad ended, some soft Mexican music would come on with a quiet voice underneath. More of the promo? Not quite. THAT was the legal ID "exx-ay-tee-err-ah tijuana"! Clever guy...

XETRA now does sports, and the programming is simulcast on KWNK, 670 AM Simi Valley CA (NW of LA).

The pre-70s days of border radio are covered in great detail in a book called "Border Radio" by Gene Fowler and Bill Crawford. (Limelight, 1987). Check your library or bookstore...

Ole'!

[Moderator's Note: I blew my mind when I first heard that McLendon was a top-40 guru. My only experience with his stations was WNUS-AM/FM which was originally all news and then Beautiful MUSIC. I thought then, and still do, that WNUS was one of the all-time best BM stations I have ever heard. Bill]

>Stay tuned!

But don't hope for contemporary jazz. The rumor now is that Westinghouse
will trade WCXR-FM/WCPT-AM Washington (WCPT is a daytimer with CNN headline)
to Viacom, which already owns WMZQ-AM-FM, the top country stations in
DC. In exchange, Viacom would give Group W KIKK-AM-FM Houston, the #2
country stations in town. Group W already owns KILT-AM-FM, the #1 country
stations in Houston. Since WCXR is not doing well for the Group...this
could be a good deal all around. Look for WCPT to go dark or be spun
off if this happens...and look for some changes at KILT AM and KIKK AM,
both of which run "classic country."

Disclaimer: I work for Group W but know nothing factual about any
such deals. This is just rumor gleaned outside the office.

## 927. RE: All-Sports Stations

Newsgroup: rec.radio.broadcasting
Date: 1993-07-11 03:31:07 UTC
From: olivert@msc.cornell.edu
Message-ID: <1993Jul11.033107.16870@gagme.chi.il.us>
Source record: 42916

A few months ago a list of "all-sports" radio stations were posted.
The list was rather incomplete and some call letters were missing.
Please add the following to your list:

Cleveland, OH WKNR 1220 AM Flagship of Cleveland Indians
baseball until 1996

Toronto, ON, Canada CJCL 1430 AM "The Fan 1430"
Flagship of Toronto Blue Jays Baseball
and Toronto Maple Leafs Hockey

San Francisco, CA KNBR 680 AM "The Sports Leader"
All-sports from 12 noon to 5 am daily
Flagship of San Francisco Giants baseball
and Golden State Warriors basketball

Los Angeles, CA KMPC 710 AM Flagship of California Angels baseball

Tijuana, BCN, Mexico XETRA 690 AM "The Mighty 690"
Flagship of San Diego Chargers Football
and Los Angeles Kings Hockey
Station is owned by Noble Broadcasting
and its studios are in San Diego, CA
Broadcasts in ENGLISH
Note: many publications lists the call
letters of this station as XTRA.
The 1993 edition of WRTH still lists
the old slogan "Extra Newsradio" even
though the station changed its format
to all-sports in late 1991.

## 928. Boston Radio Waves

Newsgroup: rec.radio.broadcasting
Date: 1993-07-11 03:31:27 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <1993Jul11.033127.16898@gagme.chi.il.us>
Source record: 42917

* The call-letter battle between Infinity(WBCN) and Greater Media(WBCS)
is being waged at a US District Court this week. Lawyers from both
companies are going over the latest spring Arbitron books and some of
Arbitron execs are being summoned to testify in odrder to clarify how
their ratings data is analyzed.

Album oriented rock station WBCN-104.1FM has had its calls for over
25 years. Boston's newest country station - WBCS-96.9FM - had its calls
for a little more than 2 months. Greater Media is stressing the fact
that it wanted WBCS to promote itself as "We're Boston's Country Station".
Infinity claims 2 similiar-sounding calls in the same metro market will
confuse listeners who happen to be Arbitron diary keepers for any particular
ratings period. As a result,Infinity claims, WBCN might lose a substantial
ad revenue in an already very soft New England advertising market.

* As of Friday(7/2) Greater Media began leasing its 5kw station WMEX-1150AM
to Haitian broadcasting group that calls itself Radio Concorde and is
based in Cambridge. Radio Concorde programming is in French Creole.
WMEX was simulcasting its very popular AC sister station WMJX-106.7FM
for the past few years.

Radio Concorde is broadcasting out of its own studios in Cambridge since
WMEX's old studios now houses WBC*S*-FM.

* Jeff "The Gonz" Gonzer,formerly a mid-day DJ at a classic rock station
WZLX-FM for the last 4 years before being canned in late March by
Infinity management, is moving back to his naitive California to work
weekends and do fill-ins at Greater Media's classic rock outlet KLSX-FM.

* Atlantic Radio,owner of WRKO-AM,WHDH-AM and WBMX-FM, fired its general
manager,Dick Penn, yesterday. Reportedly, WRKO-WHDH's program director
David Bernstein is next on the firing line....Both,WRKO,a talk station
and WHDH,an information/news/talk station have been in a ratings tailspin
for the past year or so...Some more on-air changes are rumored to be in
the makings..

* A Blast from the past : former WCDJ(now WBCS) morning man Cliff Smith
is doing fill-ins at WZLX...Former WBZ-AM personality Tom Bergeron
is filling in for WMJX's morning man John Kosaian(sp?) this week...

* Imus' syndicated show hits WEEI-590AM on Monday,July 12th at 6am...
Imus had alot of nasty words for WEEI management when the deal was
first announced in early June...If he doen't pull WEEI out of the
morning ratings gutter fast, I wonder how cocky and arrogant he'll
act then...Will 'EEI be entitled to a refund from a $200,000 plus
bonuses it's paying him if I-Man crash lands in a very competitive

AM drive in Boston?
(hey,no flames from I-Man fans...I promise I'll give hime a chance
on Monday...:-)

>at the top of the hour they do something like this:
>
> "This is 550 WLW, A Cincinnati home of the Bengals."

And a few month ago we were also bemoaning the loss of historic three-letter calls. It's sad to see historic 4-LETTER calls also bite the dust, especially on AM (I presume in this case there is still WKRC-TV).

I've been heartened by a couple of small AM stations from my past which jettisoned their original calls a while back, but returned to them. They're not what you'd call "great" stations, but in their own communities, those calls had history on their side (even if the stations themselves were struggling):

The first station on Long Island (NY), where I grew up, was WGBB/ Freeport. The calls go back to 1924. Several years ago, the station was purchased by the owners of WBAB-FM/Babylon, and they changed the calls to WBAB-AM. Much of the schedule was simulcast. A year or two, they went to a mostly news CNN format and changed the calls back to WGBB.

One of the three AM stations licensed to Binghamton (NY), where I went to school as an undergraduate and later worked in TV and radio, was WKOP. The calls go back to its sign-on in 1947. It was---forever---THE country station in the market. Several years ago they changed to an oldies format, then a business format, and went through several call letter changes. Last year, they went back to good old WKOP.

At least there is history behind the WLWA calls. Circa 1946, Crosley Broadcasting put on-the-air an FM companion to WLW: WLWA at 98.1. A year or so later it moved to 101.1. It disappeared circa 1953 before FM caught on, and I believe it wasn't until the late 70's that WLW-AM once again had an FM sister station: WLWS-96.5 (today WZRZ/Hamilton, and no longer co-owned with WLW). Today, according to my notes, besides the "new" WLWA, WEBN-102.7 is also co-owned by the WLW folks.

Keep those historic calls, please!

How about some sort of huge CN Tower or something? CFNY uses 35 thousand watts ERP from an antenna 1400 feet above average terrain. This station along with 104.5 CHUM and 107.1 CILQ can be heard decently in Rochester to the south as well.

I believe that have a 100,000 watt liscense (they did when they transmitted from a farm near Brampton). They do now transmit from the top of the CN Tower (1700 meters, I think). You also benfit from reduced multi-path as the signal screams across Lake Ontario into upstate New York. It was quite common to pick up Eire, PA stations bouncing across Lake Eire in Hamilton, ON.

We don't get CFNY in SF Bay very well, must be the Rockies ;-)

# 932. WLTT Bethesda, MD/Washington, D.C. modifies format

Newsgroup: rec.radio.broadcasting
Date: 1993-07-11 03:36:06 UTC
From: lacko@enh.nist.gov
Message-ID: <1993Jul11.033606.17108@gagme.chi.il.us>
Source record: 42922

As of Monday, July 5, 1993, WLTT Bethesda/Washington now plays light jazz at night between 8 p.m. and 5 a.m. W-Lite has hosted a very popular Sunday Jazz Brunch for about the last 6 years so this is an obvious move for the CBS owned station. Station management says public pressure since WJZE (Jazzy 100 FM) left the air was the main reason for the move. Management was also quoted in the WASHINGTON POST on Tuesday, 7/6, as saying they wanted to go full time with the light jazz format but met with resistance from CS brass.

CONGRATULATIONS W-LITE on a wise move! I'm sure that by time the fall/winter ratings period comes around you'll be playing light jazz full time.

## 933. Liddy Show in NYC

Newsgroup: rec.radio.broadcasting
Date: 1993-07-11 03:36:25 UTC
From: magri@aztech.ba.md.us
Message-ID: <1993Jul11.033625.17143@gagme.chi.il.us>
Source record: 42921

FYI...

I was listening to WABC (AM770) in NYC recently and heard them promoing the arrival of G. Gordon Liddy on (I believe) the 5th of July. They'll be tape delaying him to start at 7pm.

He won't be available on game nights, though:
"When the Yankees aren't playing, I _will_ be..."

WABC had given Liddy a tryout for a week a couple of Christmases ago while Bob Grant was on vacation. Before anything came of it, though, Liddy was picked up by WJFK in Washington, DC (which is a much better commute for him ;-) ).

Matt

## 934. Radio Moscow

Newsgroup: rec.radio.broadcasting
Date: 1993-07-11 03:36:48 UTC
From: Brunel Radio B1000 <Brunel.Radio.B1000@brunel.ac.uk>

Source record: 42920

I have just received a report that Radio Moscow has gone off air.
The reason given was that they had failed to pay their electricity bill
and have been cut off.

They claim that the government still owed them money...

AMARC Publications
==========

The following publications are available from AMARC. All prices are in US dollars (Canadian dollars if delivered to a Canadian address) and include mailing. Please use the attached coupon and include payment with your order.

Monographs
==========

International Women's Network of AMARC: Resource directory (Second edition, 1993, compiled by Justine Akman and Louise Boivin, 30 pp.) A listing of the names and addresses of over 150 women working in all aspects of community radio internationally. Highlights some of the problems and challenges facing women in community radio and presents an overview of AMARC's International Women's Network and its plan of action for 1993-1994.

Available in English, French and Spanish.
$8.00 $5.00 for AMARC members

Pan-African Meeting: Airwaves for a Pluralist Africa (AMARC, 1992, compiled by Eugenie Aw, 43 pp.) A report on the pan-African meeting of participatory radio producers held in Benin in June 1992, in collaboration with the Inter-African Center for Studies in Rural Radio at Ouagadougou (CIERRO). Includes extracts of presentations on radio and popular participation, women's radio projects, training, networking, and documentation centres and proposals for concrete actions and activities for African radio producers, including the formation of the Pan-African Network of Participatory Radio Producers.

Available in English and French.
$10.00 $5.00 for AMARC members

Report on Participatory Radio in Southern Africa (AMARC, 1992, Justine Akman, 38 pp.) This study outlines the major developments of participatory radio initiatives in South Africa, Namibia, Lesotho and Swaziland, to May 1992. With the unbanning of the African National Congress and Namibia's independence from South Africa, independent broadcasting became a possibility in these countries for the first time. There is reason to believe that broadcasting in Swaziland and Lesotho may also change in the near future. The report looks at current and future community radio initiatives in these countries.

Available in English.
$7.00 $5.00 for AMARC members

Towards a Democratic Radio Broadcasting Media in South Africa: A discussion paper (AMARC, 1991, Libby Lloyd, Justinus Maluleke, Joe Mngadi, Don Ngubeni and Sticks Zikhali, 21 pp.) The paper is the result of a radio study tour in Canada by four members of Radio Freedom and an independent South African journalist. It points to community radio as a means of satisfying some of the short- and medium-term needs of South Africans, and identifies some potential radio models.

Available in English and French.
$7.00 $5.00 for AMARC members

Proceedings of the Seminar: Participatory communication, community radio and development (AMARC, 1991, compiled by Jacques Gauthier, 22 pp.) This seminar, organized by AMARC, allowed for an exchange between non-governmental organizations (NGOs) and community radio broadcasters in the North and South. The report presents the comments and experiences of NGOs and community broadcasters from all continents on development issues such as education, popular participation, culture, human rights, and native issues.

Available in English and French.
$7.00 $5.00 for AMARC members

The Right to Communicate: AMARC 4 Conference Report (AMARC, 1990, compiled by Bruce Girard, 71 pp.) The proceedings of the Fourth World Conference of Community Radio Broadcasters (AMARC 4) held in Dublin, Ireland, in August 1990. The conference's theme was "The Right to Communicate." This report contains the keynote speech by Irish journalist, socialist and activist Eamonn McCann, as well as an overview of community radio around the world, and discussions on themes such as technology, international solidarity, management and local participation.

Available in English, French and Spanish.
$10.00 $5.00 for AMARC members

Study on Local and Rural Radio in Africa (AMARC, 1989, compiled by Eugenie Aw, 55 pp.) The results of a preliminary study coordinated by AMARC and the Inter-African Center for Studies in Rural Radio at Ouagadougou (CIERRO). The report looks at the situation of participatory radio in 12 African countries: organizational structures and their status, programming and evaluation methods, and funding. It also presents a set of recommendations to strengthen and improve the sector.

Available in English and French.
$7.00 $5.00 for AMARC members

Books
=====

A Passion for Radio: Radio Waves and Community (Black Rose Books, Canada 1992, edited by Bruce Girard, 212 pp.) Written by people actively involved in community radio, this book presents the experiences of 21 alternative radio stations located in as many countries on every continent of the globe.
$24.95 ($19.95 plus $5.00 shipping)

Radio Apasionados: 21 experiencias de radio comunitaria en el mundo (CIESPAL, Ecuador 1992, edited by Bruce Girard, 277 pp.) The Spanish translation of A Passion for Radio with a preface by Francisco Ordonez, director of CIESPAL's Radio Department.
$20.00 ($15.00 plus $5.00 shipping)

La Passion Radio: 23 experiences de radio participative et communautaire a travers le monde (Syros, France 1993, edited by Pascal Berque, Evelyne Foy and Bruce Girard, 273 pp.) The French translation of the book A Passion for Radio with two additional chapters.
$29.00 ($24 plus $5.00 shipping)

Cassettes
=========

Noticias de Ultima Ira (AMARC/CEDEP, Ecuador 1991, Jose Ignacio and Maria Lopez Vigil, 4 cassettes) A series of 52 episodes recounting the most striking events of the first 100 years of the conquest of the Americas. Using a radio news format, reporters take us back to the sixteenth and seventeenth centuries, providing a different view of the conquest while emphasizing indigenous cultures and perspectives. The short (two and a half to five minutes) reports are self-contained.
$20.00 $15.00 for AMARC members

Newsflash from the Past: Tuning in to a new history of the Americas (AMARC, 1992, 3 cassettes and 79 page booklet) An English adaptation of the series Noticias de Ultima Ira by Jos Ignacio Lopez and Maria Lopez.
$20.00 $15.00 for AMARC members

Contre-histoire des Ameriques (AMARC, 1992, 2 cassettes and 81 page booklet) A French adaptation of the series Noticias de Ultima Ira by Jose Ignacio Lopez and Maria Lopez.
$20.00 $15.00 for AMARC members

Periodical
==========

InteRadio: The newsletter of the World Association of Community Radio Broadcasters (AMARC, 12-24 pp, three issues a year).

Available in English, French and Spanish.
$10.00 per year for individuals and community radio stations
$25.00 for institutions
Free for AMARC members
